PREFACE

In this modern age, computer plays an important role in our daily life. Computers are widely used everywhere for advancement and progress in our life. Mostly every field of our surrounding is depended on computers. So, all the schools and colleges are teaching computer as one of the main subject and preparing students to meet the challenges of the coming time.

This series **Computer Interface** of 8 book (I to VIII) written for the students studying in middle classes following **National Education Policy 2020** and covers every aspect which is related to computer according to the recent development in computer technology. This series is strictly written according to the latest syllabus based on the guidelines given by CBSE. Moreover the language used in this series is very easy to understand by the students, teachers and parents.

This series is designed to provide a complete knowledge with the latest information with lab exercises and more over.

We hope that students will enjoy learning computer with this series. Any suggestions for the improvement of these books will be highly appreciated.

Contents

 1.	History of Computers	 5

History of Computers

Lesson at a Glance

Introduction
Generations of Computers

Early Age
Types of Computers

Introduction

The word 'Computing' means 'an act of calculating'. After the invention of the manual calculating tools in early days like pebbles, stones, sticks, fingers and cowries, the concept of using 'electronic gadgets' for computation was introduced which gave birth to the computer.

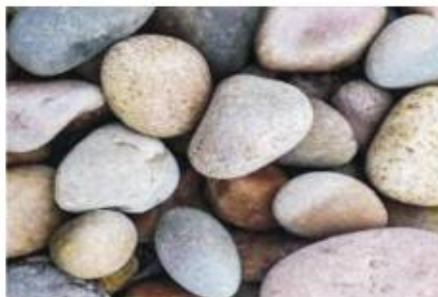

Stones

Sticks

Fingers

Pebbles

Cowries

The evolution of computers has passed through the number of stages before reaching the present state of development.

Let's learn about the early age computers.

Abacus

It was the first, earliest counting device. About 2000 years ago, it was invented in China for calculation. It is consisting of a frame of rods, with easily sliding beads on them. Simple calculations like addition and subtraction can be done by sliding the beads along the rods.

Must Know!

Sir Christopher Latham invented QWERTY keyboard layout.

Napier's Bones

It is the next calculating device. It is a set of rectangle rods marked with numbers on them. It was invented by John Napier, a Scottish mathematician, in 1614. It is a set of 11 rods and four faces. The rods are carved from bones therefore it was known as Napier's Bones. It was used to do multiplications.

Pascaline Calculator

In 1642, Blaise Pascal a french mathematician developed the world's first mechanical calculating machine called Pascaline. It consisted of gears, wheels and dials. It was used for addition and subtraction. It could handle numbers upto 999,999.999.

Lebniz's Calculator

In 1671, G.W. Leibniz invented a calculator which could multiply, divide, add and subtract.

Tabulating Machine

In 1889 Dr. Herman Hollerith developed a fast counting machine, which could read both numbers and letters. The card punching method was also used in it which later become successful to store and recall the data.

Jacquard's Loom

In 1801, a french inventor J.M. Jacquard produced a programmed loom. This loom could weave complex patterns into cloth by reading instructions from the punched cards. It was the earliest form of programmability.

Must Know!

Dr. Engelbart is the inventor of computer mouse.

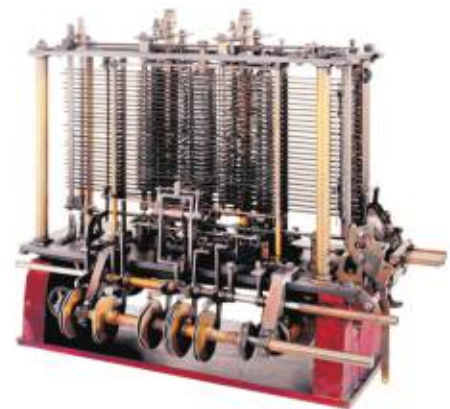

Difference Engine

In 1800's Charles Babbage an English mathematician designed the first automatic calculating engine called difference Engine. It could perform very big calculations.

Analytical Engine

In 1833, Charles Babbage made another machine, known as the 'Analytical Engine'. This machine could store 1000 numbers of 50 decimal digits each. The machine could perform all arithmetic operations and many more functions.

He is known as 'The Father of Computer's as the concept of computer was first derived by him. His ideas were very helpful in making the computer.

Must Know!

Lady Augusta Ada was the first Programmer of computers.

Generations of Computers

The development of computers passed through several stages. These stages are known as generations of computer. On the basis of the technology, made of functioning and size, computer can be classified into five generations.

Let us discuss the generations of computers.

First Generation (1940-1956)

The computer used Vacuum tubes and Magnetic drums for memory. The computer is very big in size, like the size of room. The speed was very slow. It consume lots of electricity and generated lots of heat, so could not run for long time. Example :

ENIAC (Electronic Numeric Integrator And Computer)

It was the first general purpose, fully electronic digital computer developed by J. Prespaer Eckert and John Mauchly. It contained over 18,000 vacuum tubes.

EDVAC (Electronic Discrete variable Automatic Computer)

An improvement over ENIAC, developed by Eckert, Mauchly and John Von Neumann. It is a stored program machine.

UNIVAC-I (Univeral Automatic Computer-I)

It is developed by J. Presper Eckert and John Mauchly. It was the first commercially available computer.

Second Generation (1956-1963)

The computer used transistors and Magnetic core memory. The computer were

smaller and faster than the first generation computer. It consume less amount of electricity and produced less amount of heat, so it could run for long hours. Example :UNIVAC III, IBM 1401, IBM 700, NCR 300 series, Burroughs B5000, 2000 series.

Third Generation (1964-1971)

The computer used Integrated circuits (ICs). It is also called a chip, a small electronic device made up of semiconductor material. ICs contains more than a million electronic components. The computers were available for general public because they were smaller cheaper and faster to earlier generations. The computer using keyboard and Monitor. The computer used operating system, which allow's

many different applications or programs to run at one time. Example : UNIVAC 900 series, IBM 360, ICL 1900 and Burroughs 6700.

Fourth Generation (1972 - Present)

The computer using VLSI (Very Large Scale Integration) and ULSI (Ultra large scale Integration) that could fits thousand of components on a single chip. The computer are smaller; energy efficient and more reliable that the earlier generations. The computer can process millions of instructions in a fraction of seconds.

Today's computers can linked together to form a computer network which laid the development of Internet. Example : Pentium III, IV, IBM-PC.

Fifth Generation (Present and Beyond)

The computer are expected to have an Artificial Intelligence (AI). Artificial Intelligence will laid the computer to think and take decisions like human beings.

Sixth Generation (1990 at Present)

Transitions between generations in computer technology are hard to define, especially as they are taking place. Many of the developments in computer systems since 1990 reflect gradual improvements over

established systems, and thus it is hard to claim they represent a transition to a new 'generation', but other developments will prove to be significant changes.

Types of Computers

On the basis of speed, size and memory (storage capacity) computers are classified into different categories.

Micro Computers

They are also known as personal computers (PCs). They are very small in size. They are widely used in schools, homes, offices, shops, etc.

Example : Desktop, laptop, Palmtop.

Mini Computers

They are bigger in size and has number of input and output devices.

Several hundred users can use it at the same time.
Example : VAX Computer, POP-8.

Mainframe Computers

They are big in size with a large memory and high speed.

They are mainly used by big organizations.

They are very powerful computers.

Super Computers

They are the most powerful computers in the world.

They are used in different areas like, weather forecasting, defence, space research, etc.

Example : CRAY series and PARAM series.

Must Know!

In 1890 Hollerith invented tabulating machine to process data. In 1924 his company changes its name IBM.

In May 1997, an IBM super computer, called 'Deep Blue', defeated world chess champion Gary Kasparov in a chess match.

Work Station

A Tick (3) the correct option.

(NEP) Analytical Skills

- He made the first mechanical calculator.
(a) Leibniz ☐ (b) Babbage ☐ (c) Pascal ☐ (d) Napier ☐
- Which was the first general purpose electronic computer.
(a) IBM 701 ☐ (b) UNIVAC ☐ (c) ENIAC ☐ (d) EDSAC ☐
- The difference engine was designed by:
(a) John Napier ☐ (b) Charles Babbage ☐
(c) Blaise Pascal ☐ (d) Leibniz ☐
- First generation computers used:
(a) vacuum tubes ☐ (b) integrated circuits ☐
(c) microchip ☐ (d) microprocessor ☐
- The Second generation computer used.
(a) Transistor ☐ (b) Vacuum Tubes ☐
(c) ICs ☐ (d) Memory Card ☐

B Fill in the blanks.

- Abacus was invented by _____.
- The world first mechanical calculating device _____.
- Personal computers are example of _____ computers.
- _____ computer is very small in size like a briefcase.
- Fifth generation computers have _____.

C Write T for True or F for False.

- Analytical Engine was developed by Blaise Pascal. ☐
- First generation computers contained vacuum tubes. ☐
- Mini computer has a number of input and output devices. ☐
- Operating system was introduced in the second generation. ☐
- PARAM is a super computer produced by India. ☐

D Answer the following questions.

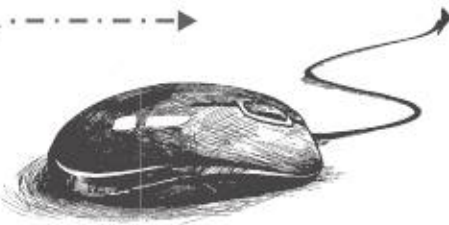

- Which is the first calculating device?

2. What in PARAM and where it was developed?

3. What is a difference Engine?

4. What is the name of first general purpose computer?

5. Write the features of mainframe computers.

W o r k s h e e t

v Identify and write the names of the following:

(NEP) Creative Learning

Concept of Smart Living

2

Lesson at a Glance

Smart Homes

Devices Used in Smart Homes

Nowadays, people use a variety of gadgets in their homes to make their life easier. Using such gadgets makes it easier for the user to focus on other important tasks rather than working on those tasks repeatedly.

Smart Homes

Home is a place where people living in feel safe, cared and appreciated. Smart Homes enhance this experience and provide a better life for the people living in them. Smart Homes are homes that use internet connected devices to empower remote monitoring and management of appliances and devices such as for lighting and heating.

Benefits of Smart Homes

The following are the benefits of smart homes :

- Smart Homes are great in saving power. For example, people often forget to switch off their lights when they go to sleep. Smart Homes can detect when the user is asleep and accordingly switch off the lights.
- They are installed with smart security devices which helps in protecting the home and its belongings.

- They are connected to multiple devices and all of those devices can be accessed easily all at once with the help of a smartphone.
- They are installed with gadgets which can be accessed remotely and can control various functions. For example, a person can control the temperature of the Smart Home.

Devices Used in Smart Homes

Smart Home owners are always connected to the Internet and they use AI-enabled devices to monitor and manage appliances and systems with remote control.

These devices use the various domains of AI like Computer Vision, Machine Learning, Natural Language Processing and Deep Learning. Following are popular smart devices in trend nowadays :

Smart TV

Smart TVs are AI-enabled TVs. and can perform many tasks. Smart TV allows its users play music, movies, or change channels using Internet. And all this can be controlled with your voice.

Video Doorbells

Video doorbells provide security as the owner can watch who is outside the door before actually opening it. It has a built-in camera to watch and a microphone to talk to the visitor through the intercom.

Smart Cameras

When it comes to home security, smart cameras are the most important devices. It is used to monitor the indoor and outdoor activities. It not only records the movements but also sends alerts for suspicious movements.

Smart Smoke Detectors

This device sounds an alarm when smoke is detected. It can warn you if there is fire in your home.

Smart Lighting

Smart lights help in saving and conserving the energy. It can be programmed to turn on/off, control the brightness and store your preferences.

Smart Speakers

These smart speakers can accept voice commands and can be controlled through smart phones. They can also perform activities like creating a playlist, turning on reminders, searching information on the Internet, etc.

Work Station

A Tick (3) the correct option.

(NEP) Analytical Skills

1. Which of the following helps in saving and conserving the energy?
 - a. Smart Cameras ☐
 - b. Smart Light ☐
 - c. Smart Speakers ☐
 - d. Smart Key ☐
2. Which of the following protects a smart home from intruders?
 - a. Smart TV ☐
 - b. Smart Cameras ☐
 - c. Smart Speakers ☐
 - d. Smart bag ☐
3. _____ allows its users play music, movies, or change channels using Internet.
 - a. Smart TV ☐
 - b. Smart Speakers ☐
 - c. Smart Cameras ☐
 - d. Smart Light ☐

B Fill in the blanks.

1. Smart _____ help in saving and conserving the energy.
2. Smart homes use devices that are internet and _____ enabled.
3. The Smart home provides instant alerts ON the _____ if the house is hit by fire, flood or any other disaster.
4. _____ sounds an alarm when smoke is detected. It can warn you if there is fire in your home.

C Write T for True or F for False.

1. Smart living is an evolving trend that improves the living standards of people by using smart devices to make the life comfortable. ☐
2. Smart homes use devices that are not internet and AI enabled. ☐
3. Smart homes are eco-friendly and economical. ☐
4. Smart devices are Internet enabled, customised and can be remotely controlled. ☐

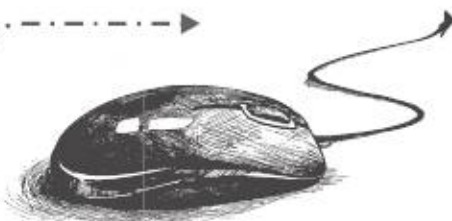

D Answer the following questions.

1. What is a Smart home? List any four benefits of Smart homes.

2. Name any three Smart devices that are used in Smart homes.

3. What is the use of Smart smoke detectors?

4. What is the use of Smart TV?

W or k sheet

Rearrange the letters and write the name of the smart devices.

(NEP) Computational Learning

1. IEVOD DOROLELB

2. SATMR SEAPREK

3. SATRM BHU

LAB ACTIVITY

Open the web browser and play the Blob Opera game. Blob Opera is an experimental music game uses a machine learning model trained on real voices to make it easy for anyone to create amazing operatic music!.

Customizing the Start Menu Personalizing your Desktop
Windows 10 Taskbar

Windows 10 is the most popular Operating System of the Microsoft Corporation. It controls each and every part and activity of your computer. It recognizes the input and output data from the computer and make it work.

Let's learn some of the features of Windows 10.

Customizing the Start Menu

The left corner button on the screen is called start button. When you click on it, it shows the start menu. Start menu is used to access program and setting of the computer. It has two vertical parts. The left part shows the installed and the most used apps. The right part consists of tiles that your can customize, resize and reorganize.

A brief history of the Start menu

In earlier versions of Windows, such as Windows 7, the Start menu was confined to a narrow column. In Windows 8, the Start menu was replaced with the Start screen, a large, full-screen menu.

However, many users complained that the Start screen was confusing and difficult to use. As a result, the Start menu was added back to Windows 10. And while it's similar to the Start menu found in earlier versions, it's also been expanded to include tiles, which were originally introduced in Windows 8.

Must Know!

MS Windows 13 is a latest version of Windows. However, the most commonly used version is Windows 10.

To rearrange tiles

If you don't like the way your tiles are arranged on the Start menu, you can rearrange them. To move a tile, simply click and drag it to the desired location. In this example, we'll move the Microsoft Edge tile.

To make a tile bigger or smaller, right-click the tile, select **Resize**, then choose the desired size.

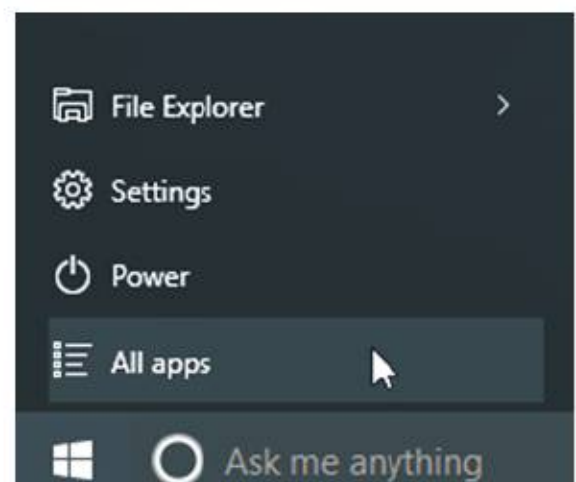

think
over

What do you know
about WYSIWYG?

Pinning and unpinning tiles

If you want to add a tile to the Start menu, you can pin it. You can also unpin tiles you don't use very often.

1. Click the Start button, then open the **All apps** menu.

- Find and right-click the desired app, then select Pin to Start. In this example, we'll pin the Calculator app.

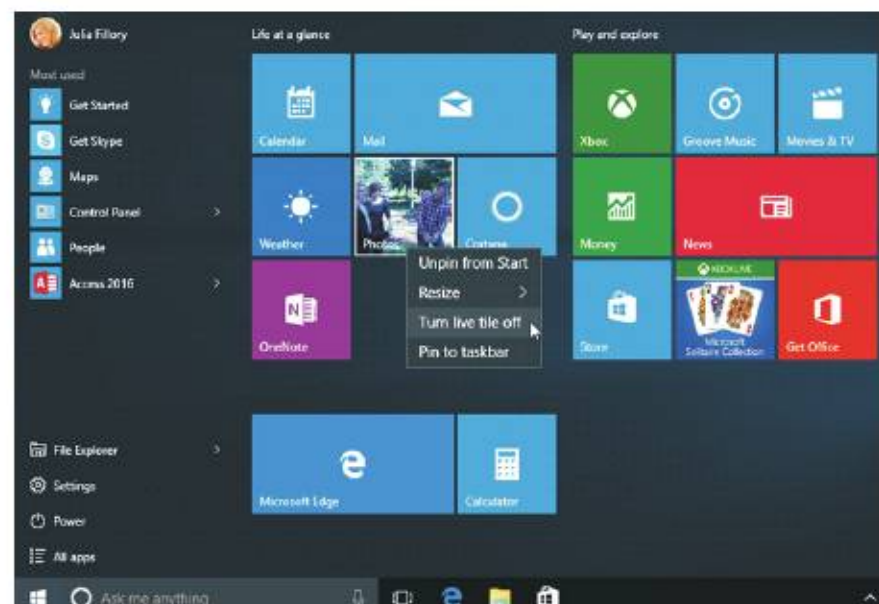

- The app will be pinned to the Start menu. You can remove any tile by right-clicking, then selecting Unpin from Start.

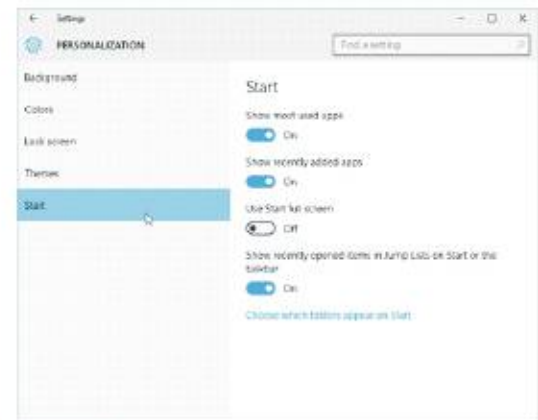

To turn off live tiles

You may notice that certain tiles, such as those for the News and Weather apps, are animated. These are called **live tiles**. However, if you find that these are too distracting, you can turn them off. To do this, right-click the desired tile, then select **Turn live tile off**. In this example, we'll turn off the live tile for the **Photos** app.

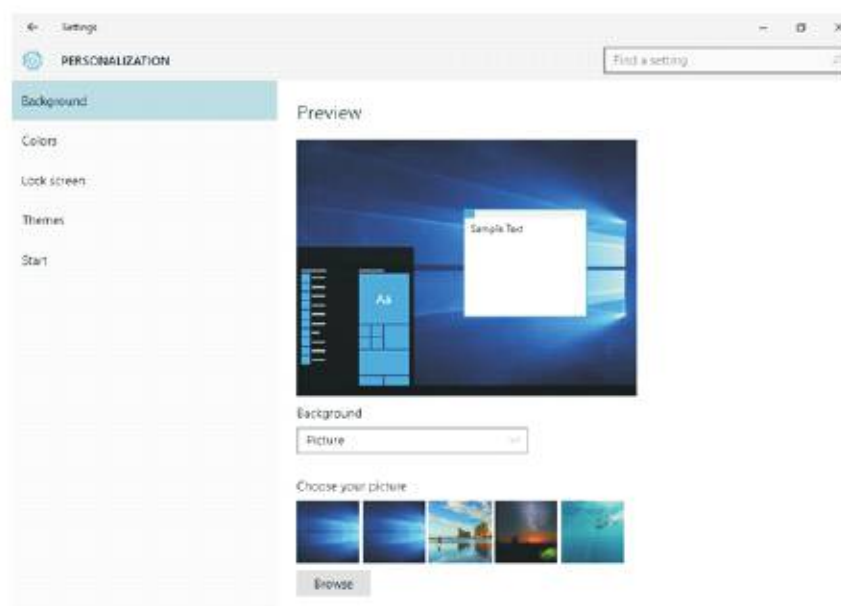

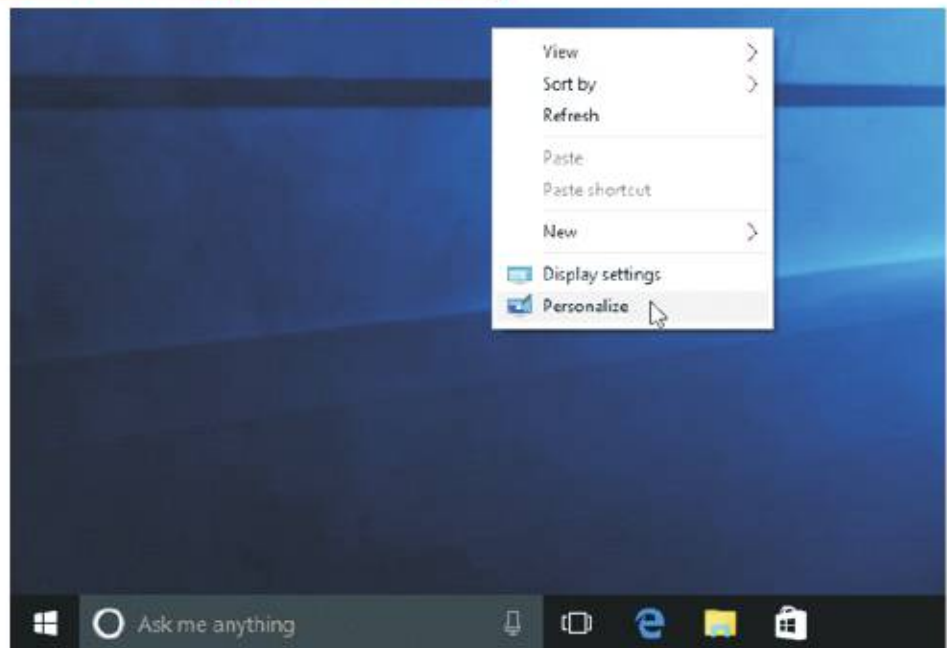

Other Start menu options

There are a few other settings you can change for the Start menu, including viewing the Start menu in full-screen mode. To access these options, right-click the desktop, select Personalize, then choose Start. From here, you can choose to turn these options on or off.

Personalizing your Desktop

Windows 10 makes it easy to customize the look and feel of your desktop. To access the Personalization settings, right-click anywhere on the desktop, then select Personalize from the drop-down menu. The Personalization settings will appear

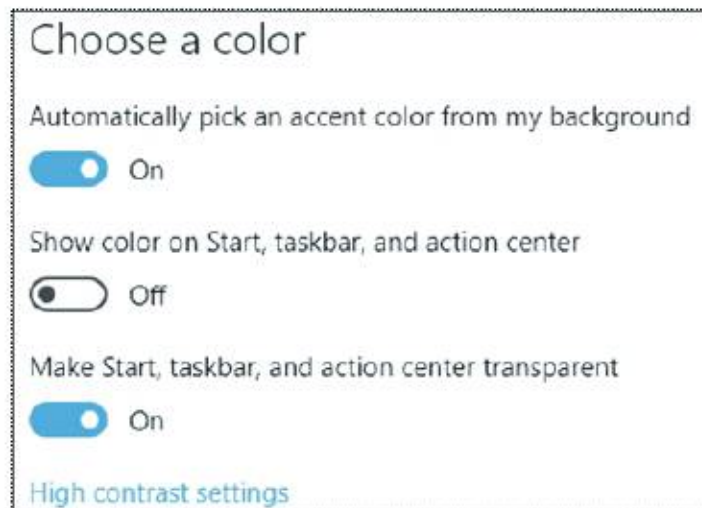

Background

From here, you can choose and customize your desktop background.

Colors

The accent color affects things like the taskbar and the Start menu. By default, Windows 10 will assign an accent color based on your desktop background image. However, you can turn this feature off if you'd prefer to choose your own accent color.

Lock screen

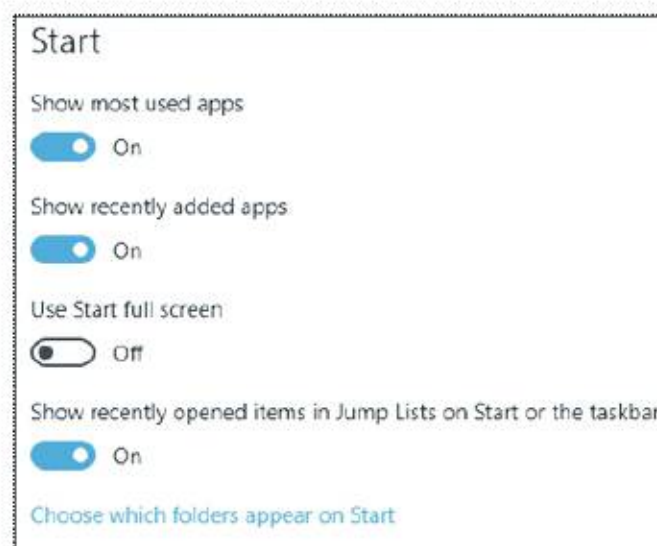

From here, you can customize the appearance of your lock screen. As with your desktop background, you can use a built-in picture or select Browse to choose one of your own.

Themes

If you previously installed themes on an earlier version of Windows, you can view and select them here. However, Microsoft does not currently plan to release new themes for Windows 10.

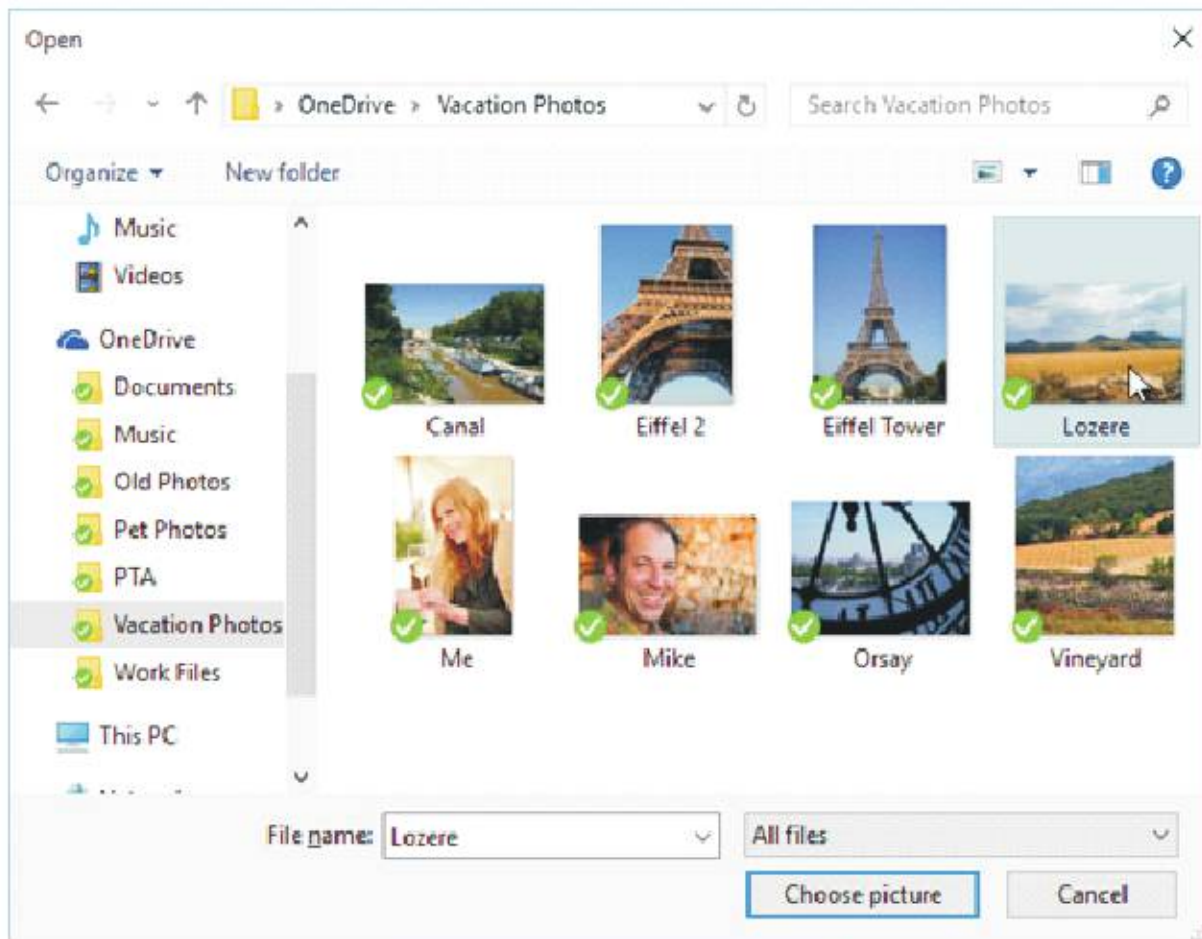

Start

From here, you can customize certain options for the Start menu, like choosing to show the Start menu in full-screen mode.

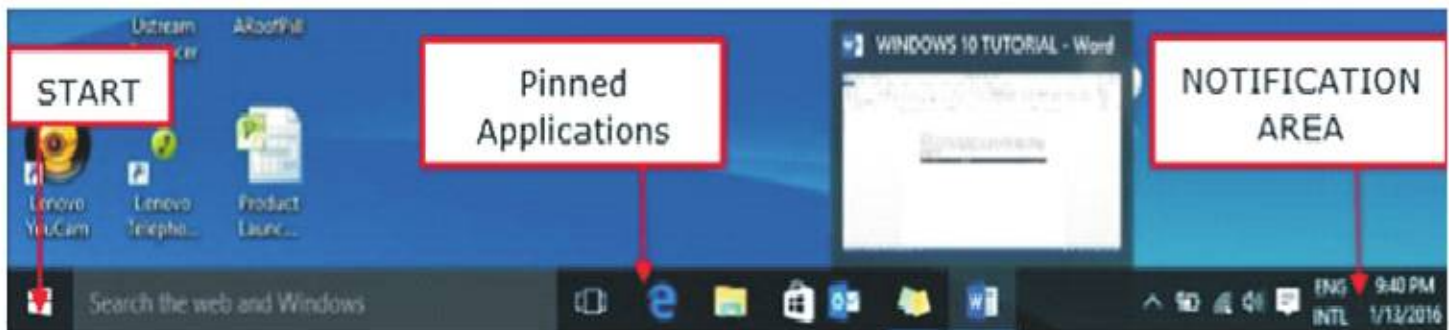

Browse

Select **Browse** to choose a desktop background from one of your personal photos.

Windows 10 Taskbar

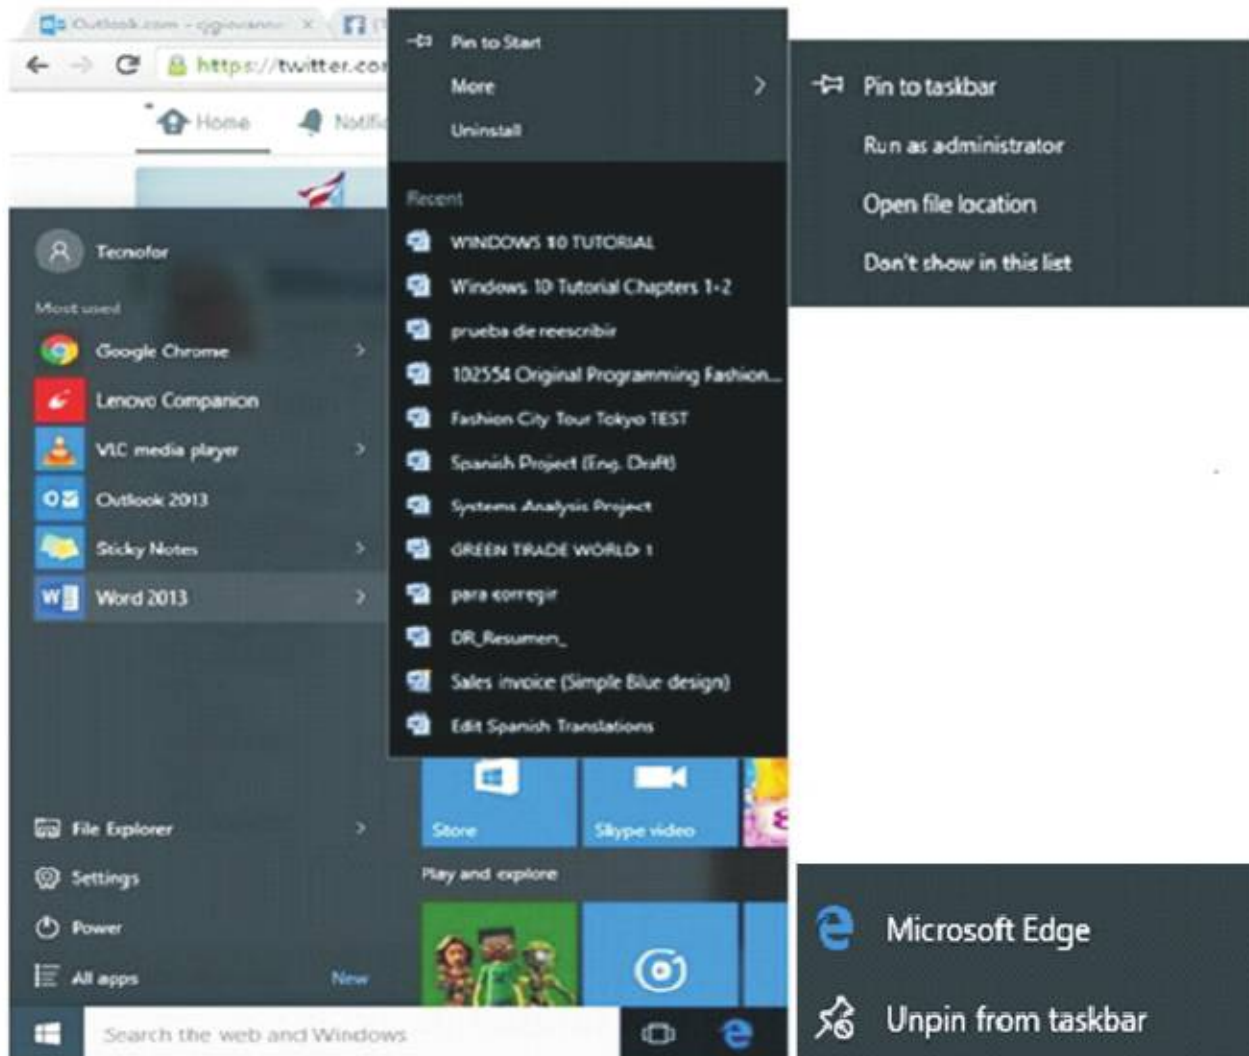

The Windows 10 taskbar sits at the bottom of the screen giving the user access to the Start Menu, as well as the icons of frequently used applications. On the right-side, the Taskbar features the Notification Area which informs the user of different things like the state of the Internet connection or the charge of the laptop battery.

The icons in the middle of the Taskbar are “pinned” applications, which is a way to have a quick access to applications you use frequently. “Pinned” applications will stay in the Taskbar until you “unpin” them.

Pin an Application to the Taskbar

- Step 1** : Search for the application you want to pin in the Start Menu.
- Step 2** : Right-click on the application.
- Step 3** : Select “More” option at the top of the menu.
- Step 4** : Select the “Pin to taskbar” option.

This will attach or “pin” the application icon to your Windows Taskbar:

Unpin an Application from the Taskbar

To “unpin” it, just right-click the icon in the Taskbar and select “Unpin from taskbar”. You can “pin” it back again any time you want.

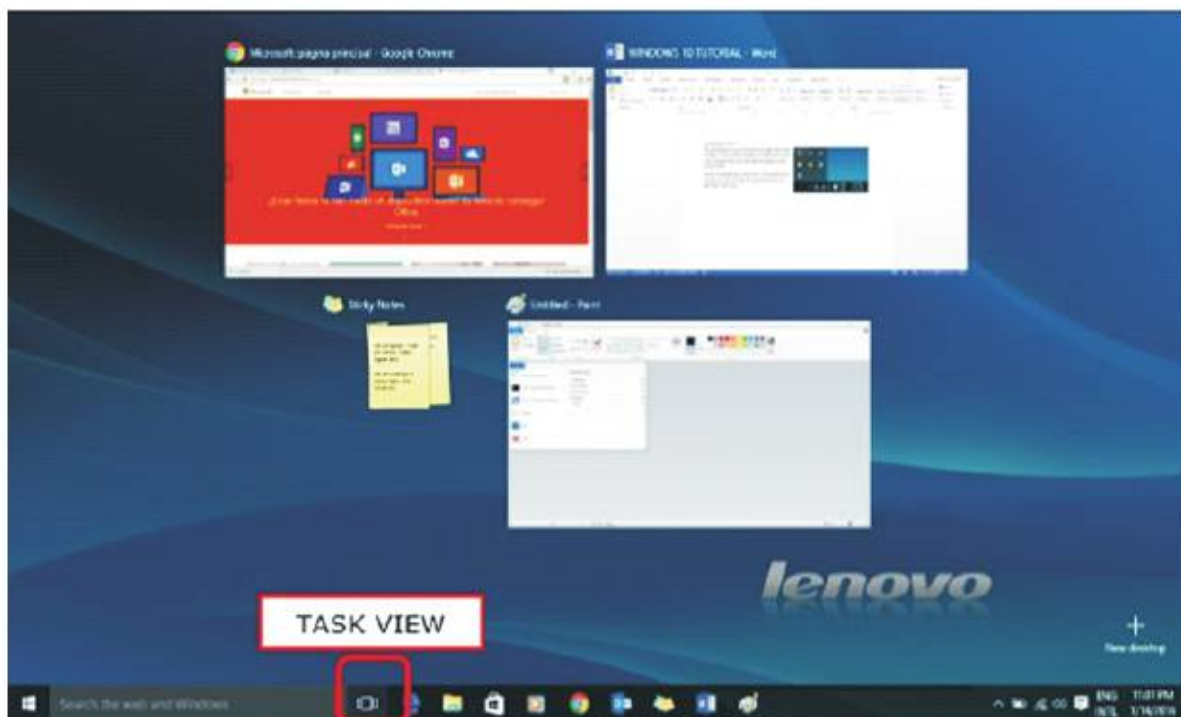

Notification Area

The Notification Area is located at the right side of the Taskbar. It shows different types of notifications from your computer like your Internet connection, or the volume level.

At first, the Notification Area shows a limited amount of icons. But you can click the upward arrow on its left-side to see other icons as well.

Task View

Task View allows you to quickly move within your open windows and applications. You can access it by clicking the “Task View” button from the Taskbar.

You can also press and hold the Windows key, and then press Tab to achieve the same result.

By pressing the Alt+Tab keyboard shortcut also serves a similar purpose.

Work Station

A Tick (3) the correct option.

(NEP) Analytical Skills

- You may notice that certain tiles, such as those for the News and Weather apps, are animated.
(a) Themes ☐ (b) Start menu ☐ (c) Live tiles ☐ (d) Task bar ☐
- From here, you can choose and customize your desktop background.
(a) Desktop ☐ (b) Start menu ☐ (c) Taskbar ☐ (d) Background ☐
- From here, you can customize certain options for the Start menu.
(a) Desktop ☐ (b) Task bar ☐ (c) Status bar ☐ (d) Start ☐
- This allows you to quickly move within your open windows and applications.
(a) Status view ☐ (b) Task View ☐ (c) Start view ☐ (d) Open view ☐
- It informs the user of different things like the state of the Internet connection.
(a) Desktop Area ☐ (b) Background Area ☐
(c) Notification Area ☐ (d) Application Area ☐

B Fill in the blanks.

- One of the most important features in Windows 10 is the _____.
- The _____ affects things like the taskbar and the Start menu.
- The _____ sits at the bottom of the screen giving the user access to the Start Menu.
- On the right-side, the Taskbar features the _____.
- The icons in the middle of the Taskbar are _____ applications.

C Write T for True or F for False.

- If you want to add a tile to the Start menu, you can paste it. ☐
- By default, Windows 10 will assign an accent color based on your desktop background image. ☐
- Select Desktop to choose a desktop background from one of your personal photos. ☐
- The Windows 10 taskbar sits at the bottom of the screen giving the user access to the Start Menu. ☐
- To “unpin” it, just right-click the icon in the Taskbar and select “Unpin from taskbar”. ☐

D Match the followings.

- | | |
|----------------------|--|
| 1. Start | (a) Show the Start menu in full-screen mode. |
| 2. Taskbar | (b) Allows you to move within your open windows. |
| 3. Notification Area | (c) Show the Start menu in full-screen mode. |
| 4. Task View | (d) Sits at the bottom of the screen. |
| 5. Start menu | (e) Located at the right side of the Taskbar. |

E Arrange the jumbled words.

1. NIPGNIN
2. POTKSED
3. ESWORB
4. KSATRAB
5. PAPNOITACIL

F Answer the following questions.

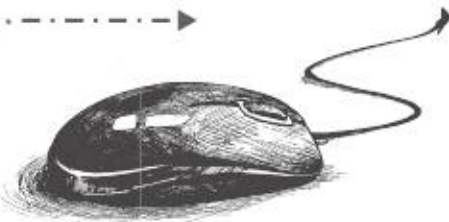

1. Define Start Screen.

2. What is a Lockscreen?

3. Describe Themes.

4. What is Taskbar?

5. What is Notification Area?

W o r k s h e e t

v Complete the crossword:

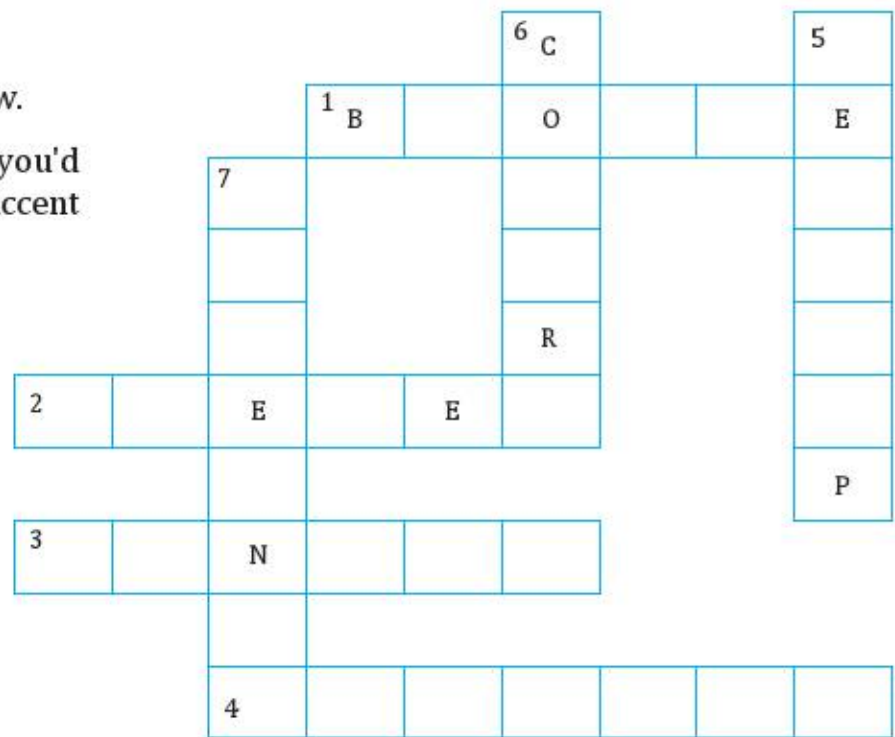

(NEP) Creative Learning

Across

1. To choose a desktop background
2. A Personalize option.
3. An operating system.
4. It appears at the bottom of screen.

Down

5. It is the main screen of window.
6. You can turn this feature off if you'd prefer to choose your own accent color.
7. Network of Networks.

✓ **Identify and name them:**

Graphics in MS- Word 2013

Lesson at a Glance

Inserting Pictures
Insert SmartArt

Insert WordArt
Insert Shapes

The use of Graphics will enhance your documents and allow you to provide the reader with additional information in the form of a visual aid. There is a variety of graphics into a word document that makes word document prettier.

Let's learn about these features of MS-Word 2013.

Inserting Pictures

Microsoft word allows importing pictures into your word document. Pictures can improve the overall appearance of your document. You can insert images from your computer or search Microsoft's extensive selection of clip art to find the image you need. Once an image has been inserted, you can format text to wrap around the image.

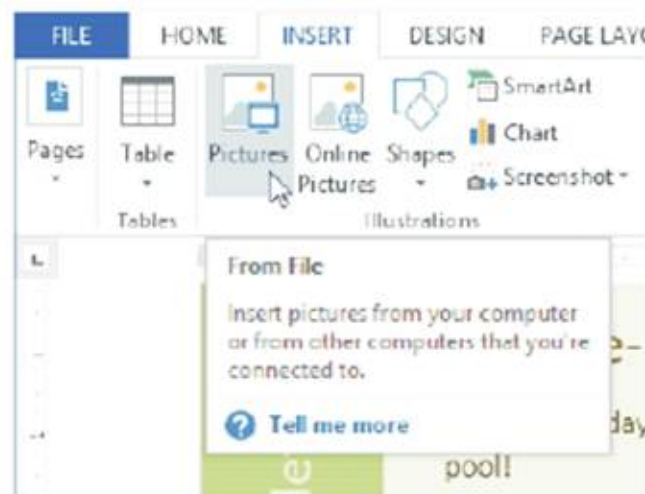

Inserting Pictures from Files

If you have a specific image in mind, you can insert a picture from a file.

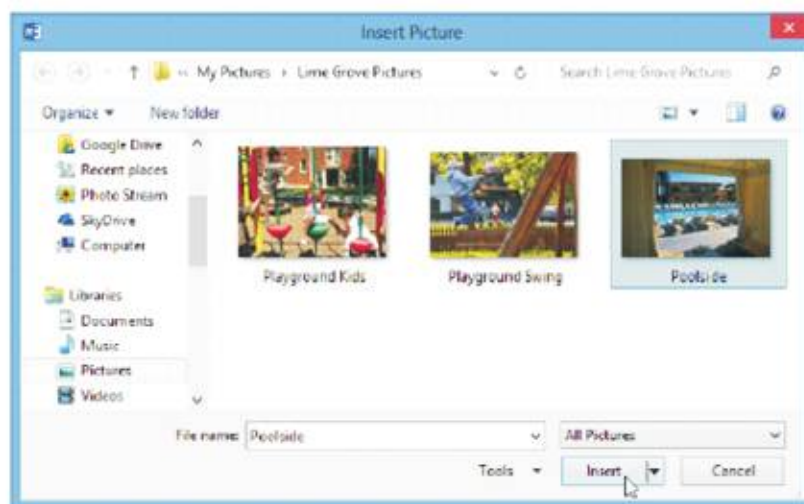

1. Place the insertion point where you want the image to appear.

2. Select the Insert tab on the Ribbon, then click the Pictures command.

3. The Insert Picture dialog box will appear. Select the desired image file, then click Insert.

4. The image will appear in the document.

To resize an image, click and drag one of the corner sizing handles. The image will change size while keeping the same proportions. If you want to stretch it horizontally or vertically, you can use the side sizing handles.

Insert WordArt

In addition to adding effects to a text box, you can add effects to the text inside the text box, which is known as WordArt. For the most part, the types of effects you can add are the same as the ones you can add to shapes or text boxes (shadow, bevel, etc.). However, you can also Transform the text to give it a wavy, slanted, or inflated look.

To apply a quick style to text:

A quick style will automatically apply several effects to your text at once. You can then refine the look of your text by adding or modifying text effects.

1. Select the text box, or select some text inside of the text box. The Format tab will appear.

2. Click the Format tab.
3. Click the Quick Styles command in the WordArt Styles group. A drop-down menu will appear.

4. Select the desired style preset to apply the style to your text.

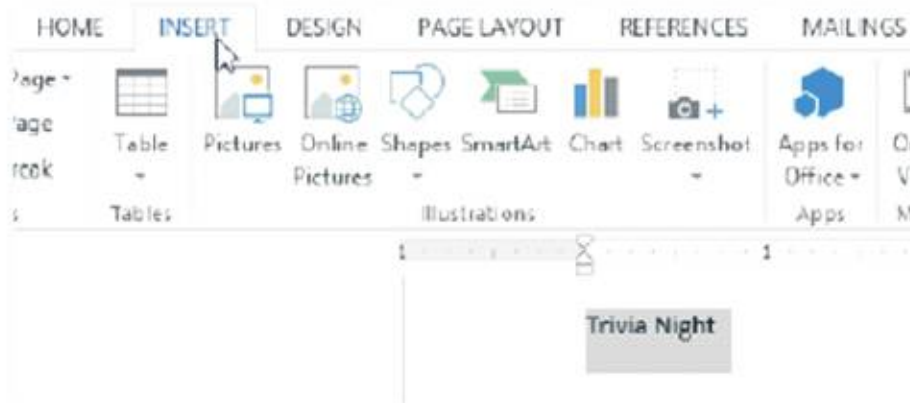

5. The text will appear in the selected style. If you want, you can change the font or font color from the Home tab.

To convert regular text into WordArt :

For text to be formatted as WordArt, it needs to be inside of a text box. However, there's a shortcut that allows you to convert text into WordArt even if it's not in a text box.

1. Select the text you want to convert.

2. Click the **Insert** tab.
3. Click the WordArt command. The Quick Styles drop-down menu will appear:

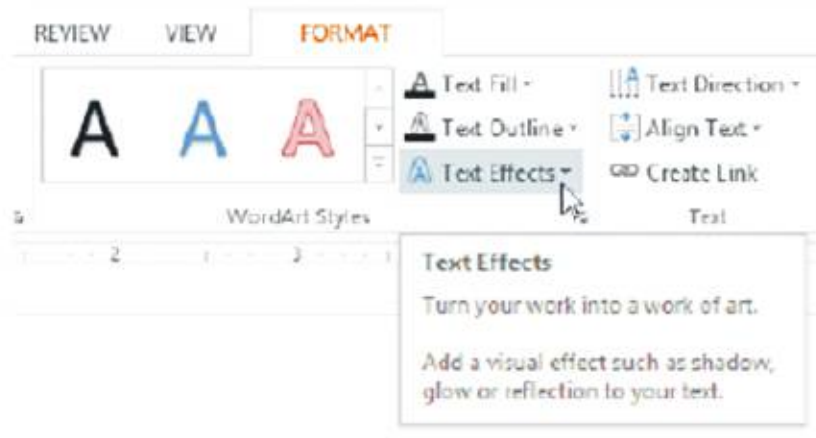

4. Select the desired quick style.
5. Word will automatically create a text box for your text and apply the style to the text.

Some effects, such as shadows, can be added from the Text Effects menu in the Home tab. When you add effects in this way, it will not place the text in a text box.

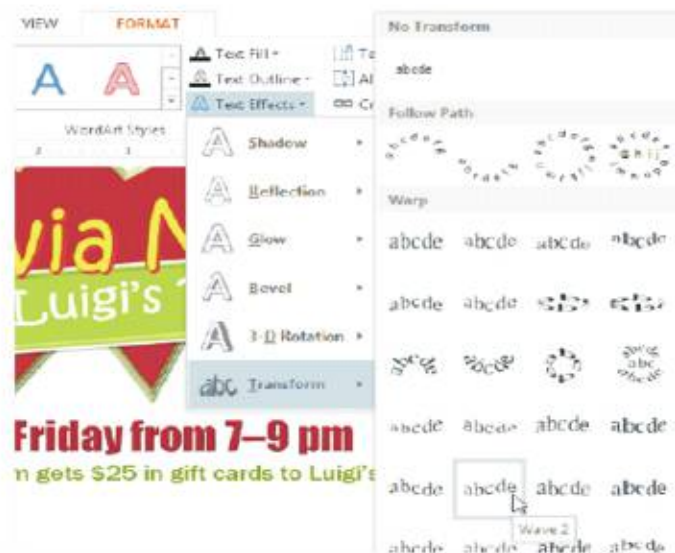

To add or modify text effects :

1. Select the text box, or select some text inside of the text box. The **Format** tab will appear.
2. Click the Format tab.
3. Click the Text Effects command in the WordArt Styles group. A drop-down menu will appear, showing the different effect categories.

4. Hover over an effect category. A drop-down menu will appear. You can hover the mouse over the different presets to see a live preview.

5. Select the desired effect preset. The effect will be applied to your text. If you want, you can combine several effects.

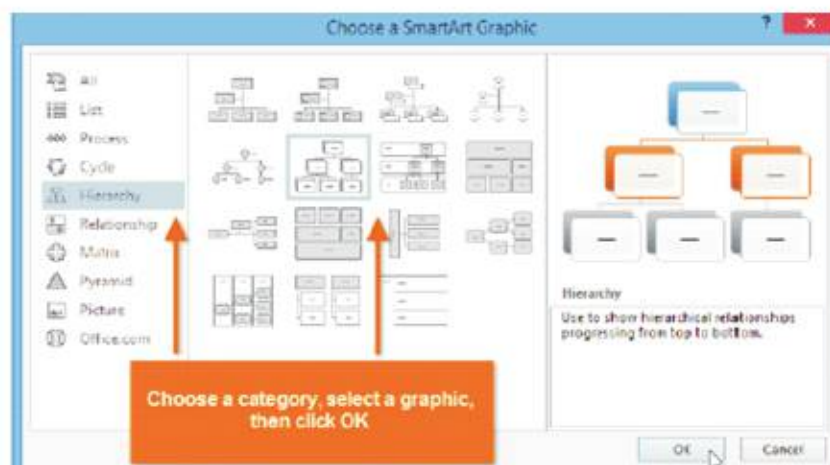

Insert SmartArt

SmartArt allows you to visually communicate information rather than simply using text. Illustrations can enhance your document, and SmartArt makes using graphics especially easy.

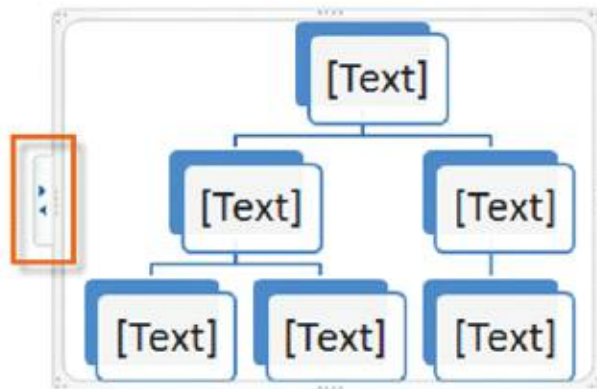

1. Place the insertion point in the document where you want the graphic to appear.
2. Select the Insert tab.
3. Select the SmartArt command in the Illustrations group. A dialog box appears.

4. Select a category to the left of the dialog box.
5. Select the desired SmartArt graphic, then click OK.

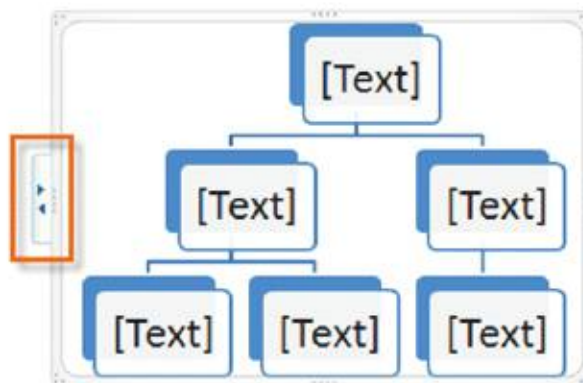

6. The SmartArt graphic will appear in your document.

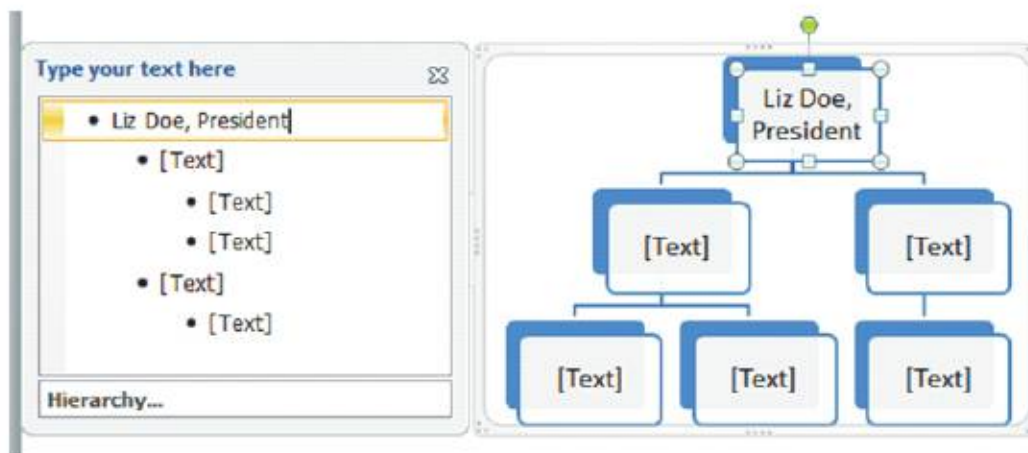

To add text to a SmartArt graphic :

1. Select the graphic. A border will appear around it with an arrow on the left side.
2. Click the arrow on the left side of the graphic to open the task pane.

3. Enter text next to each bullet in the task pane. The information will appear in the graphic and will resize to fit inside of the shape.

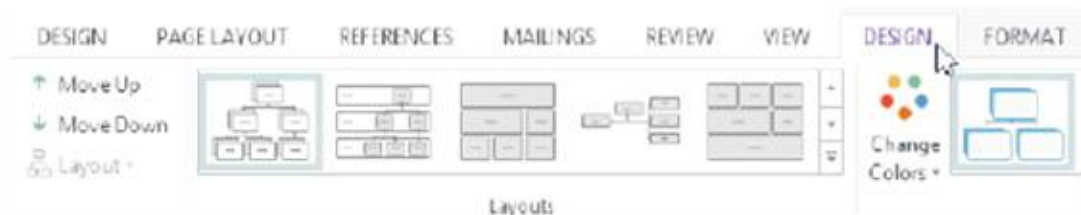

4. To add a new shape, press Enter. A new bullet will appear in the task pane, and a new shape will appear in the graphic.

Insert Shapes

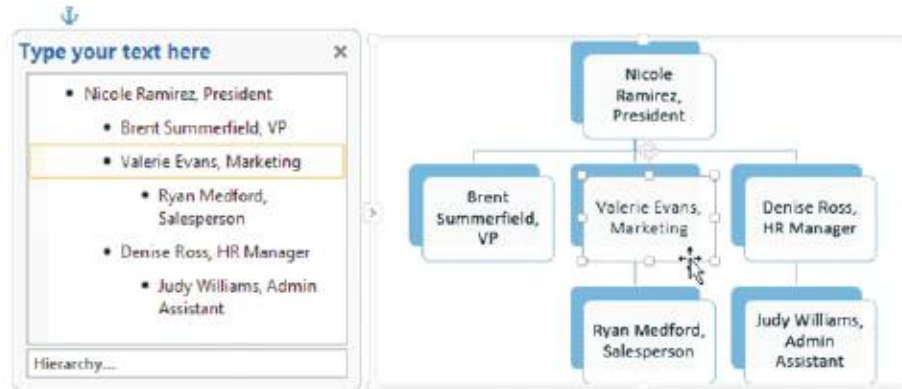

Shapes are ready made shapes provided in MS-Word. They can be inserted directly in the document. There are different types of shapes like lines, connectors, Basic shapes, Block Arrows, Flow Chart etc.

To add a shape :

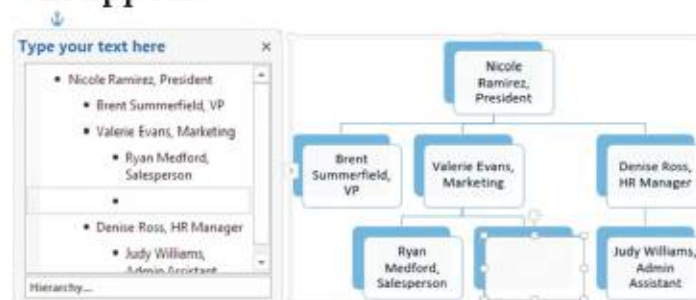

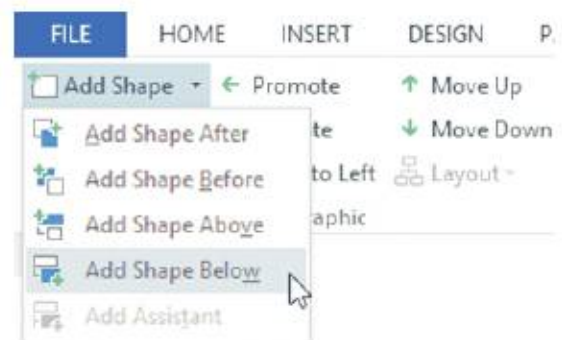

1. Select the SmartArt graphic, then click the Design tab on the right side of the Ribbon.

2. Decide where you want the new shape to appear, and select an adjacent shape.

3. Click the Add Shape command in the Graphics group. A drop-down menu will appear.
4. Select Add Shape Before or Add Shape After to add a shape on the same level as the selected shape. Select Add Shape Above or Add Shape Below to add a shape above or below the selected shape.
5. The new shape will appear.

USING COLOURS

Word provides a variety of color schemes to use with SmartArt. The color schemes use theme colors, so they will vary depending on which theme you are using.

1. Select the SmartArt graphic, then select the Design tab.
2. In the **Layouts** group, click the **More** drop-down arrow.

3. Select the desired layout, or click **More Layouts...** to see even more SmartArt options.

4. The selected layout will appear:

A Tick (3) the correct option.

(NEP) Analytical Skills

1. It enhance your documents and allow you to provide the reader with additional information.
(a) Word art ☐ (b) Graphics ☐ (c) Shapes ☐ (d) Smart art ☐
2. You can add effects to the text inside the text box, which is known as:
(a) Quick style ☐ (b) Word art ☐ (c) Smart art ☐ (d) Shapes ☐
3. This will automatically apply several effects to your text at once.
(a) Quick style ☐ (b) Word art ☐ (c) Smart art ☐ (d) Shapes ☐
4. It allows you to visually communicate information rather than simply using text.
(a) Word art ☐ (b) Images ☐ (c) Shapes ☐ (d) Smart art ☐
5. Word provides a variety of color schemes to use with:
(a) Clip art ☐ (b) Pictures ☐ (c) Images ☐ (d) SmartArt ☐

B Fill in the blanks.

1. _____ in word document that makes word document prettier.
2. _____ can improve the overall appearance of your document.
3. You can also _____ the text to give it a wavy, slanted, or inflated look.
4. _____ can enhance your document, and SmartArt makes using graphics especially easy.
5. _____ are ready made shapes that can be inserted directly in the document.

C Write T for True or F for False.

1. Once an image has been inserted, you can format text to wrap around the image. ☐
2. You can also insert a photograph or other images from your files. ☐
3. After you have applied a quick style, you can still modify the font or font color from the Insert tab if you want. ☐
4. Some effects, such as shadows, can be added from the Text Effects menu in the View tab. ☐
5. The color schemes use theme colors, so they will vary depending on which theme you are using. ☐

D Match the followings.

Opening a Presentation

Microsoft PowerPoint is a widely used software to create professional quality presentation. It is used by business people, educators, students and trainees etc.

PowerPoint 2013 is a presentation software that allows you to create dynamic slide presentations that may include animation, narration, images, and videos.

Must Know!

MS- PowerPoint is presentation graphics software developed by Microsoft.

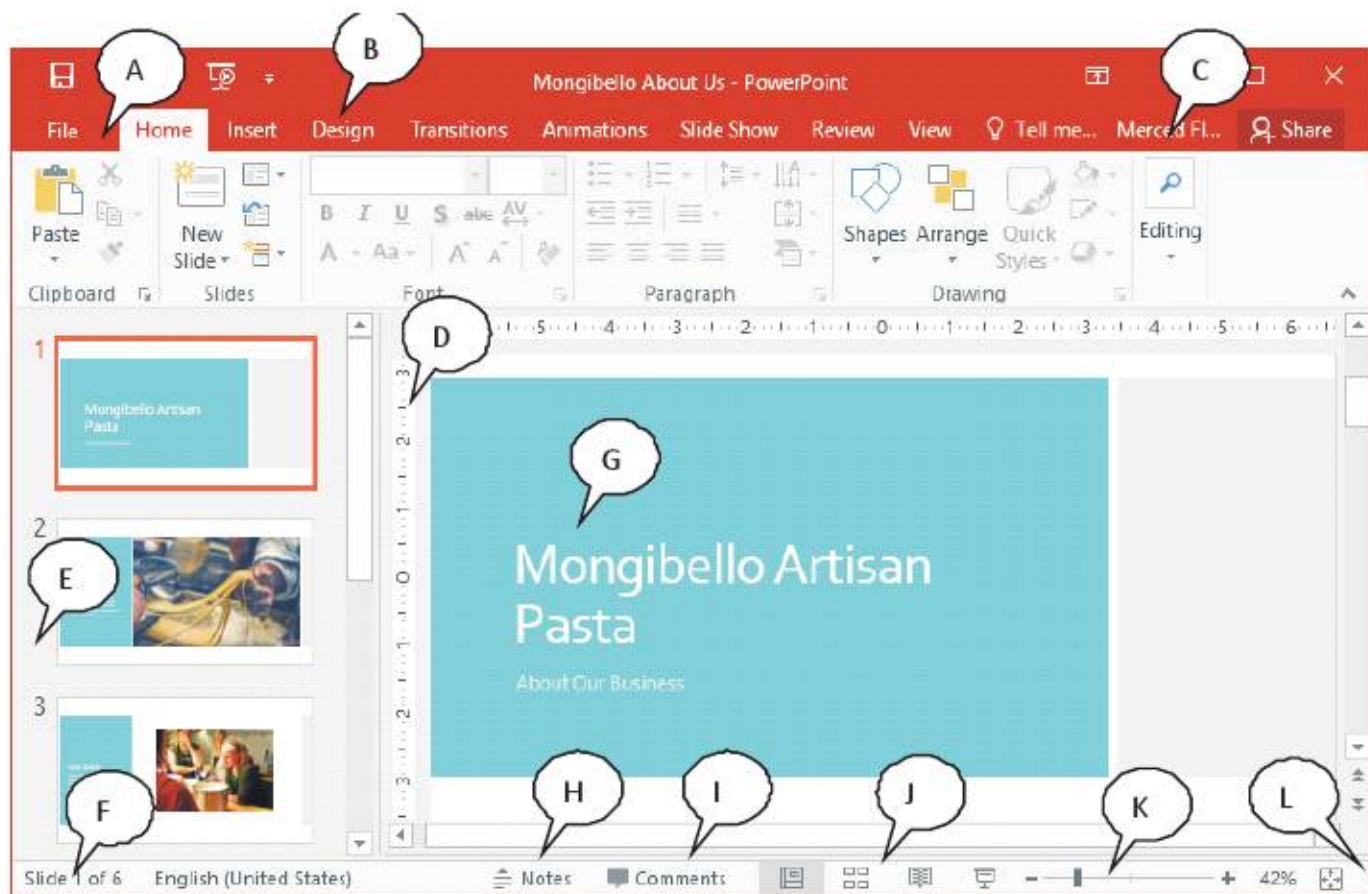

Presentation

PowerPoint uses slides to build a presentation. A presentation is a structure stepwise delivery of information made up of one or more slides. A presentation supported by images, animations and audio helps to catch and retain the attention of the audience.

How to start MS-PowerPoint

1. Click on Start menu.
2. Click on Word 2013

The PowerPoint 2013 program screen appears.

A. The Ribbon

The **Ribbon** contains all of the **commands** you will need to perform common tasks in PowerPoint. It has multiple **tabs**, each with several **groups** of commands.

B. Quick Access Toolbar

The Quick Access Toolbar lets you access common commands no matter which tab is selected. You can customize the commands depending on your preference.

C. Microsoft Account

From here, you can access your Microsoft account information, view your profile, and switch accounts.

D. Ruler

The Ruler is located at the top and to the left of your current slide. It makes it easy to align text and objects on your slide.

E. Slide Navigation Pane

The slide navigation pane allows you to view and organize the slides in your presentation.

F. Slide Number Indicator

Here, you can quickly see the total number of slides in your presentation, as well as which slide you are viewing.

G. Slide Pane

Here, you can view and edit the selected slide.

H. Notes

Click Notes to add notes to your current slide. Often called speaker notes, they can help you deliver or prepare for your presentation.

I. Comments

Reviewers can leave comments on any slide. Click Comments to view comments for the current slide.

J. Slide View Options

There are four ways to view a presentation. Simply click a command to select the desired view.

K. Zoom Control

Click and drag the slider to use the zoom control. The number to the right of the slider reflects the zoom percentage.

L. Vertical and Horizontal Scroll Bars

The scroll bars allow you to scroll up and down or side to side. To do this, click and drag the vertical or horizontal scroll bar.

Use of Presentation Software

- ✓ It is used at offices, schools and many other places to express ideas and opinions to an audience.
- ✓ It consists of information along with graphics, movies, sound, etc. which are displayed together on the screen.
- ✓ A presentation created in MS-PowerPoint consists of a number of pages called slides.
- ✓ A slide contains text, images, audio clips, movies, sound effects, animated transitions etc.
- ✓ Multiple slides are grouped together and displayed in sequence, which is called a slide show.

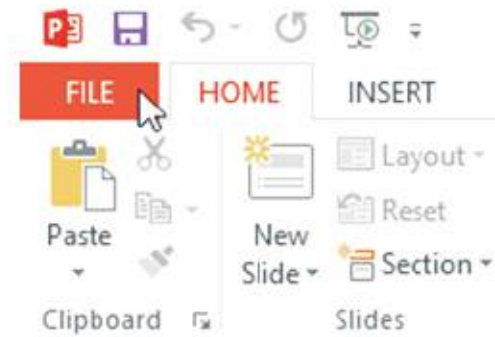

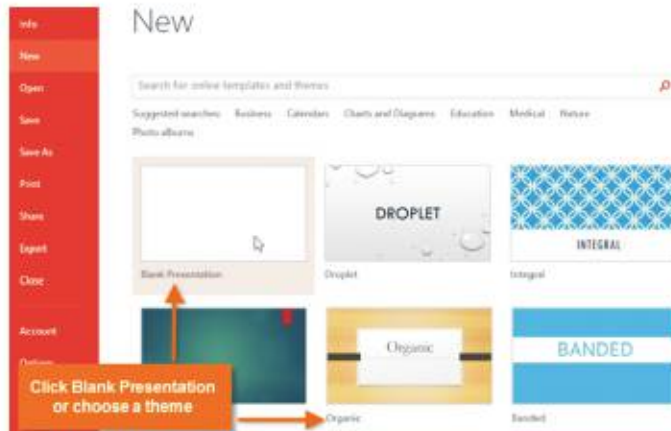

Creating a New Presentation

Creating a new presentation is one of the most basic commands you need to know in PowerPoint. A new blank presentation appears by default whenever you open the PowerPoint program.

You can also create a new presentation using a template. A template is a pre-designed presentation that you can use if you don't have the time or creative ability to design your own presentation from scratch.

Create a new blank presentation

1. Select the **File** tab to go to **Backstage** view.

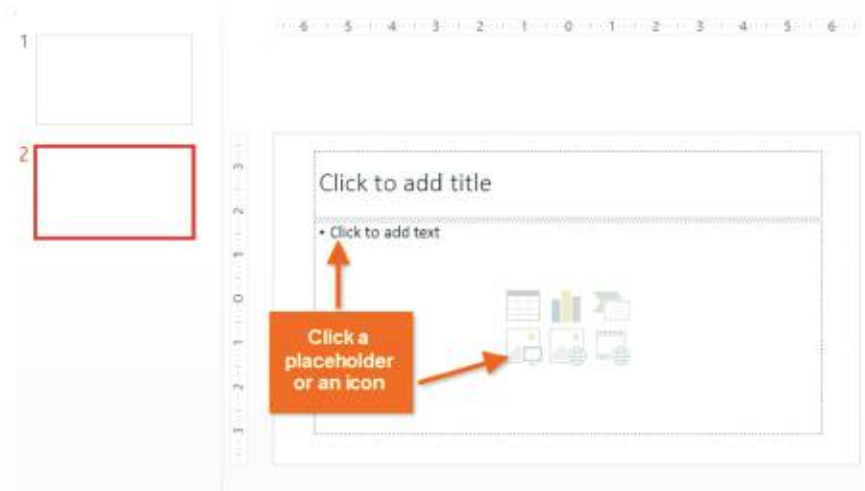

2. Select **New** on the left side of the window, then click **Blank Presentation** or choose a theme.
3. A new presentation will appear.

Insert a new slide

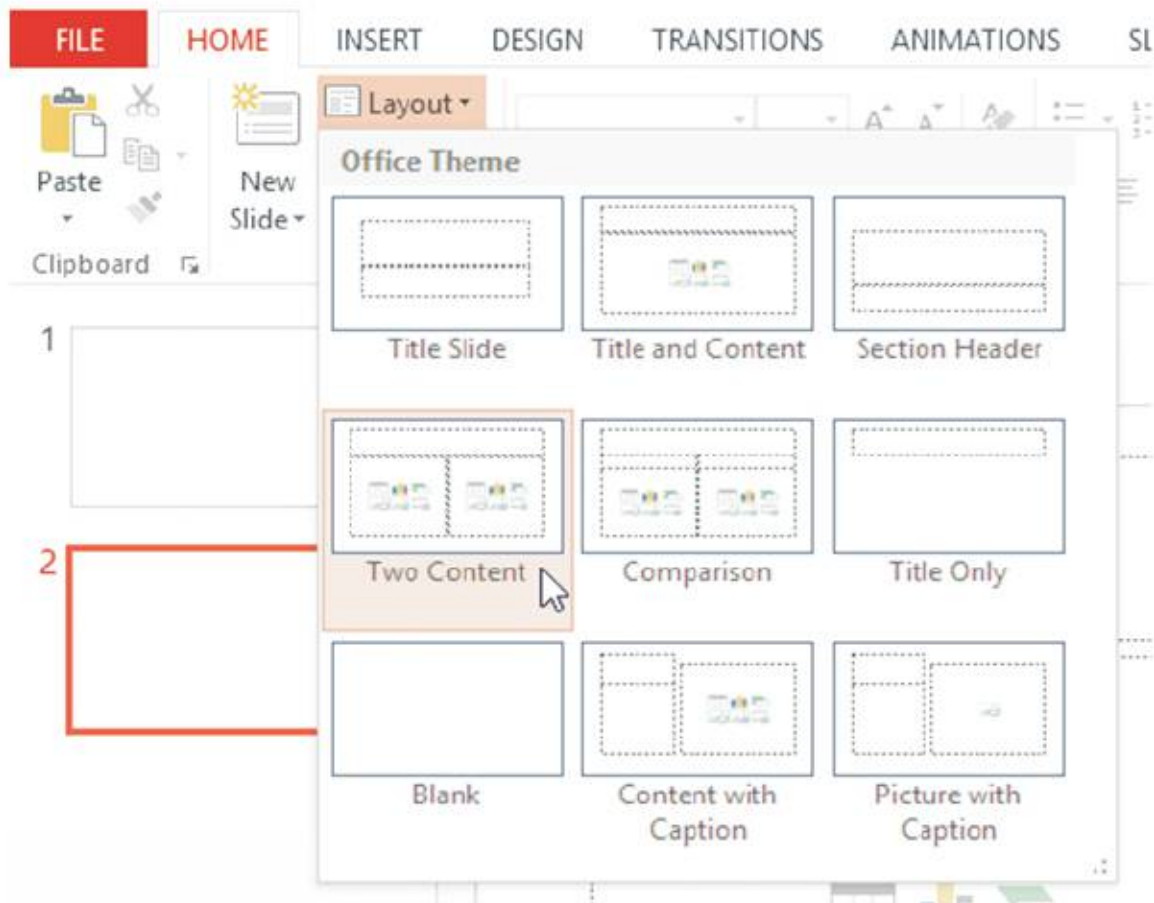

To insert a new slide :

Whenever you start a new presentation, it will contain one slide with the Title Slide layout. You can insert as many slides as you need from a variety of layouts.

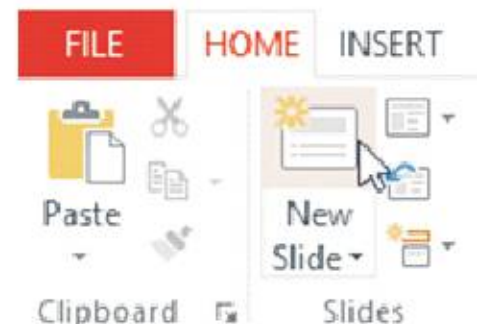

1. From the **Home** tab, click the bottom half of the **New Slide** command.
2. Choose the desired slide layout from the menu that appears.
3. The new slide will appear. Click any placeholder and begin typing to add text. You can also click an icon to add other types of content, such as a picture or a chart.

4. To change the layout of an existing slide, click the **Layout** command, then choose the desired layout.

5. To quickly add a slide that uses the same layout as the selected slide, click the top half of the New Slide command.

Select a Layout

Placeholders are arranged in different layouts that can be applied to existing slides or chosen when you insert a new slide. A slide layout arranges your content using different types of placeholders, depending on what information you might want to include in your presentation.

In the example above, the layout is called Title and Content and includes title and content placeholders. While each layout has a descriptive name, you can also tell from the image of the layout how the placeholders will be arranged.

Saving a Presentation

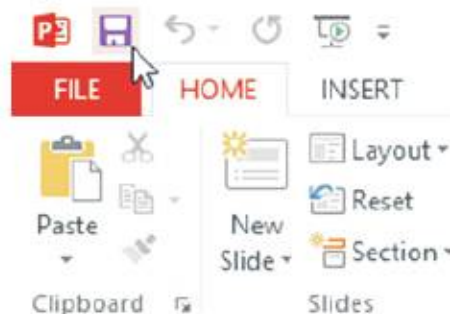

Once you have created a presentation, you need to save it if you ever intend on using it again.

PowerPoint offers two ways to save a file : Save and Save As. These options work in similar ways, with a few important differences:

Save : When you create or edit a presentation, you'll use the Save command to save your changes. You'll use this command most of the time. When you save a file, you'll only need to choose a file name and location the first time. After that, you can just click the Save command to save it with the same name and location.

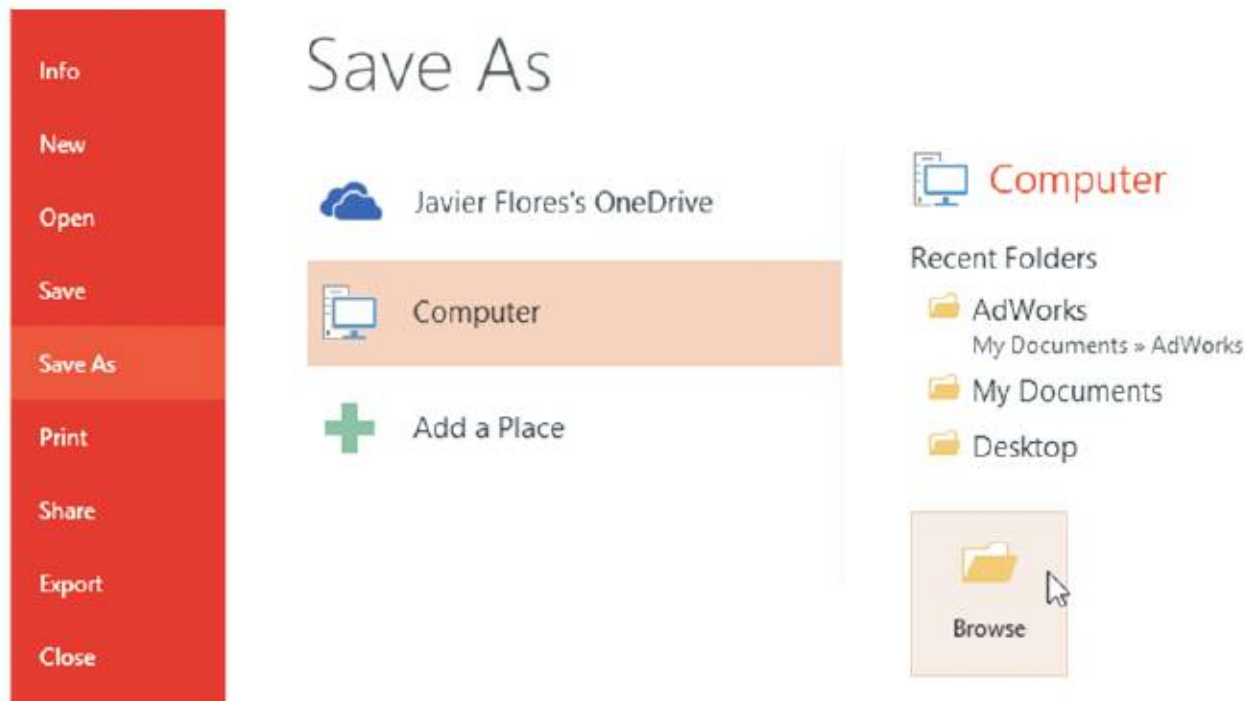

Save As : You'll use this command to create a copy of a presentation while keeping the original. When you use Save As, you'll need to choose a different name and/or location for the copied version.

1. Locate and select the **Save** command on the **Quick Access** toolbar.

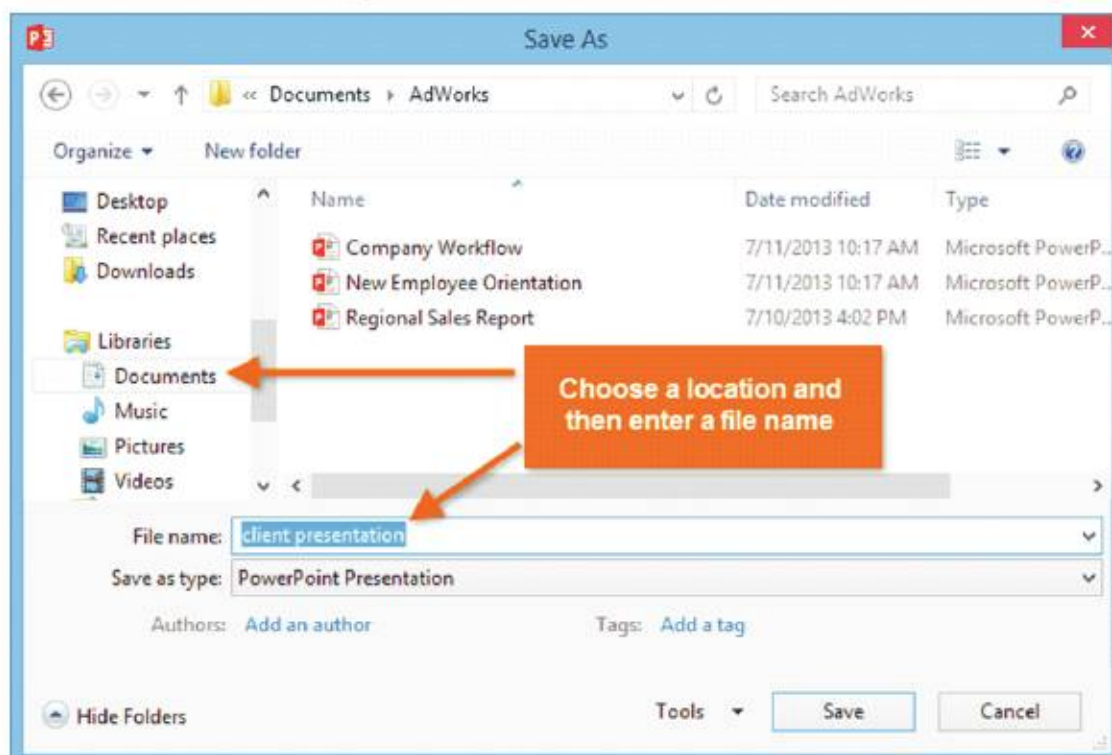

2. If you're saving the file for the first time, the Save As pane will appear in Backstage view.

3. You'll then need to choose where to save the file and give it a file name. To save the presentation to your computer, select Computer, then click Browse. Alternatively, you can click OneDrive to save the file to your OneDrive.

4. The Save As dialog box will appear. Select the location where you want to save the presentation.
5. Enter a file name for the presentation, then click Save.

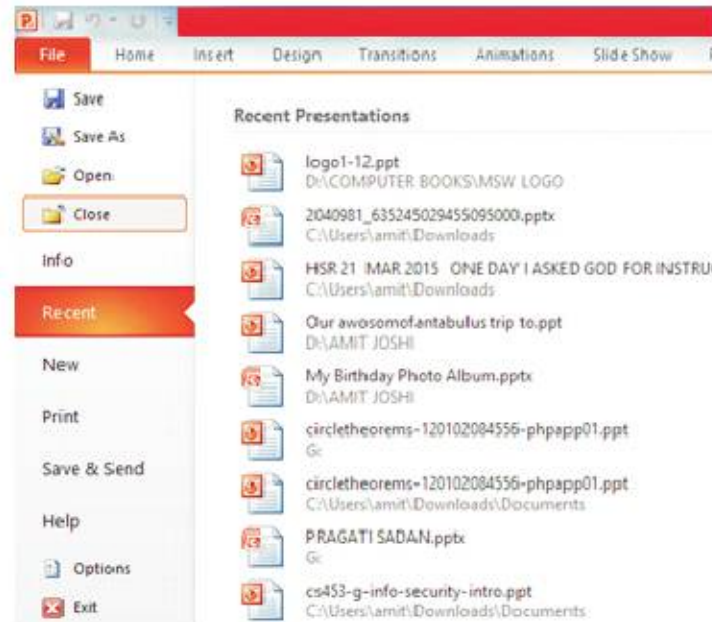

6. The presentation will be saved. You can click the Save command again to save your changes as you modify the presentation.

You can also access the **Save** command by pressing **Ctrl+S** on your keyboard.

Closing a Presentation

When you're finished working on a presentation, you need to close it.

Click the Office Button and select Close.

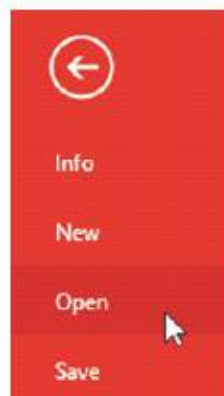

The presentation closes.

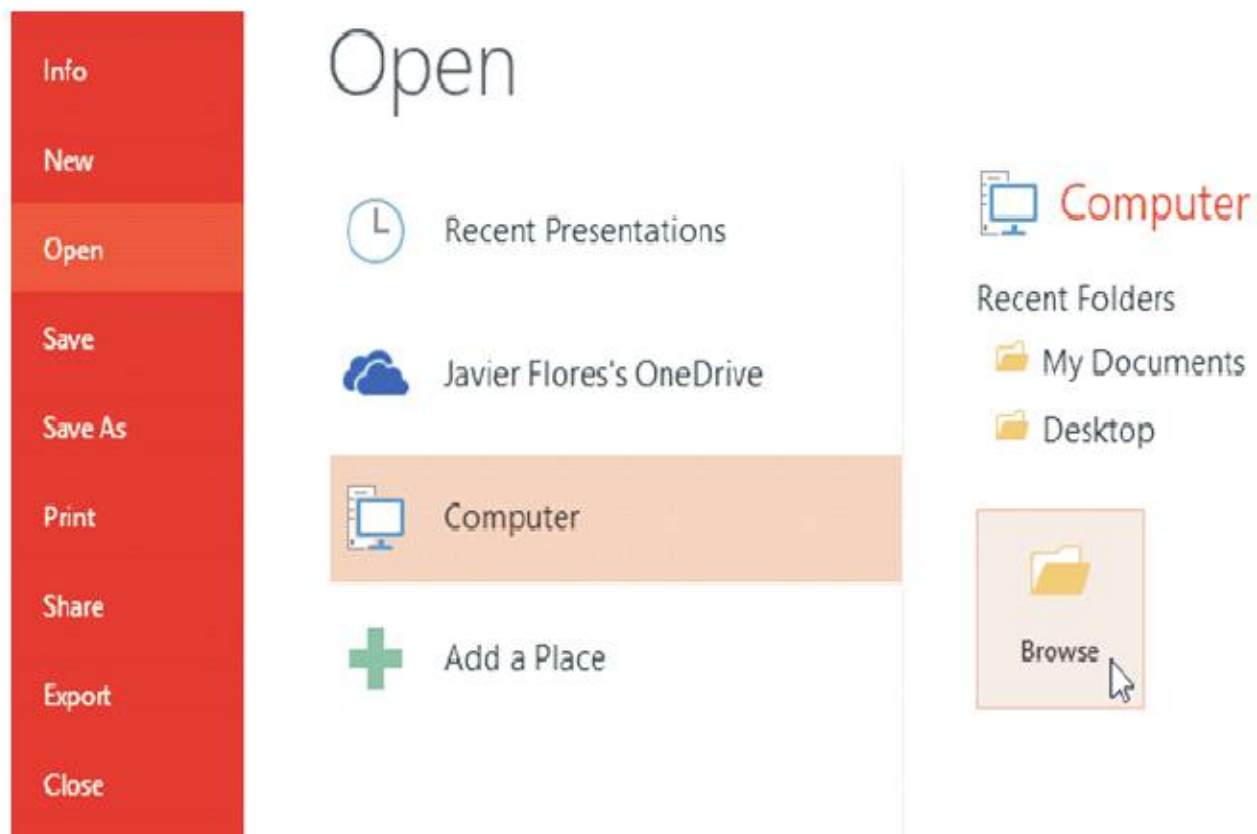

Opening a Presentation

Opening a presentation that you or someone else has previously created and saved is one of the most basic and common tasks in Microsoft PowerPoint.

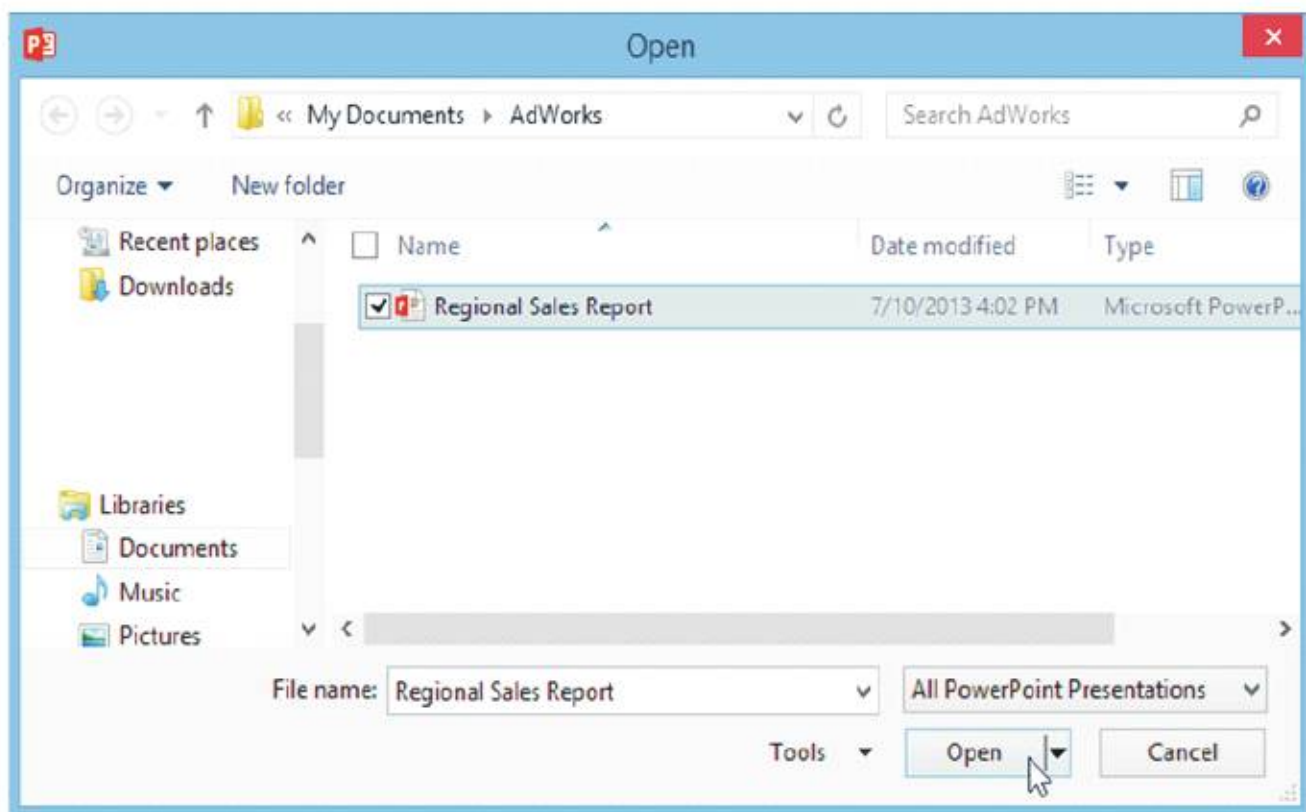

1. Select the File tab to go to Backstage view.
2. Select Open. The Open dialog box appears.

3. Select Computer, then click Browse. Alternatively, you can choose OneDrive (previously known as SkyDrive) to open files stored on your OneDrive.

4. The Open dialog box will appear. Locate and select our presentation, then click Open.

A Tick (3) the correct option.

(NEP) Analytical Skills

1. In PowerPoint creating dynamic slide that include animation, narration, images, and videos is called a:
(a) Word editing ☐ (b) Animation ☐ (c) Presentation ☐ (d) Narration ☐
2. This toolbar lets you access common commands no matter which tab you are on in the Ribbon.
(a) Slide Access ☐ (b) Outline Access ☐ (c) Quick Access ☐ (d) Tab Access ☐
3. This tab allows you to view and work with the slides in your presentation.
(a) Slide ☐ (b) Outline ☐ (c) Quick ☐ (d) Access ☐
4. This tab conveniently displays the text content of each slide.
(a) Slide ☐ (b) Outline ☐ (c) Quick ☐ (d) Access ☐
5. You can edit your text directly from this view.
(a) Normal view ☐ (b) Slide view ☐ (c) Outline view ☐ (d) Report view ☐

B Fill in the blanks.

1. PowerPoint uses slides to build a _____.
2. _____ Toolbar add other commands to make it more convenient.
3. You can add, delete, duplicate, and rearrange slides in the _____.
4. The _____ contains all of the commands you will need in order to perform common tasks.
5. _____ view displays smaller versions of all of the slides in the presentation.

C Write T for True or F for False.

1. You can add as many slides as you want to a presentation. ☐
2. You can also add sections to the Slides tab to organize and divide your slides. ☐
3. Reading view is selected by default and shows the Slide and Outline tabs, along with displaying the current slide. ☐
4. Normal view displays only the slides with buttons at the bottom of the screen for navigation. ☐
5. Slide Show will play your slides as an actual presentation. ☐

Logo Procedure

Lesson at a Glance

Introduction
Writing a Procedure

Logo Procedure
Saving a Procedure

Parts of Logo Procedure

Introduction

To make figures and shapes using logo commands, you write the commands step by step. When you enter commands in Logo, they are carried out instantly. Instead of writing all the commands again, you can save the commands and give them a collective name, with the help of logo procedure.

Logo Procedure

A logo procedure is a set of instructions given in a proper order to create a drawing or carry out a calculation, collectively saved under a name.

When you want to repeat an operation, you can simply use a procedure for it.

Before, learning the procedure let's recall the logo commands.

Logo Commands

Primitive	Functions	Syntax
FD	It moves the turtle in Forward direction.	FD [Number]
BK	It moves the turtle in Back direction.	BK [Number]
RT	It turn the turtle to its right.	RT [Number]
LT	It run the turtle to its left.	LT [Number]
HOME	It brings the turtle to the centre of the screen.	Home
CS	It is used to clear the screen.	CS
CT	It is used to clear the text area.	CT

Primitive	Functions	Syntax
HT	It makes the turtle disappear from the screen.	HT
ST	It is used to display the turtle on the screen.	ST
PU	It is used to move the turtle to any part of the screen.	PU
PD	It is used to continue the drawing.	PD
PE	It is used to erase any part of a drawing.	PE
Print	It is used to print a text message on the screen.	Print

Must Know!

A procedure may contain basic commands and multiple REPEAT statements too.

Rules for Naming a Procedure

- ✓ Procedure name should include letters, numbers or symbols.
- ✓ The first character of name always start with a letter.
- ✓ In procedure name Blank spaces cannot be included.
- ✓ Arithmetic operators +, -, *, / cannot be included in the name.
- ✓ LOGO Command names cannot be included in procedure name.

Parts of LOGO Procedure

LOGO Procedure has three parts: Title, Body and END.

Title : The first line of a LOGO procedure. It is the name of the procedure.

Body : The commands written for drawing figure.

End : The last line of the procedure.

Writing a Procedure

Every procedure has a name.

The general structure of procedure is as follows :

1. To Procedure Name
2. Logo Commands
3. END

We can write a procedure by two ways :

1. Using the Input Box.
2. Using Editor Window.

Must Know!

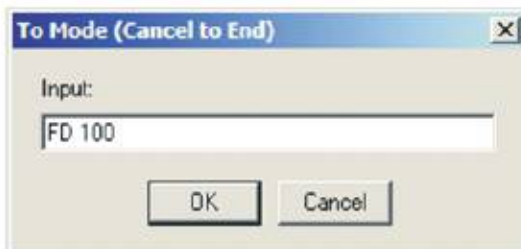

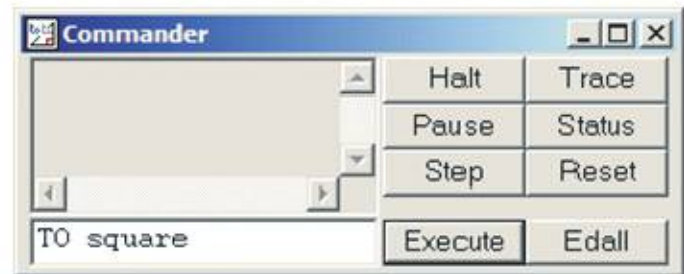

Don't use blank space while writing a procedure.

Method 1 : Using the Inputbox

Step 1 : In the command Inputbox, Type in :

To followed by the name of the procedure.
e.g. To square

Step 2 : Press the enter key. The To mode (cancel to end) box appears.

Step 3 : Type the commands to produced square. Press the enter key after each command.

FD 100
RT 90
FD 100
RT 90
FD 100
RT 90
FD 100
RT 90

Step 4 : When all your commands are entered, type END and press Enter key.

Your procedure for square has been defined.

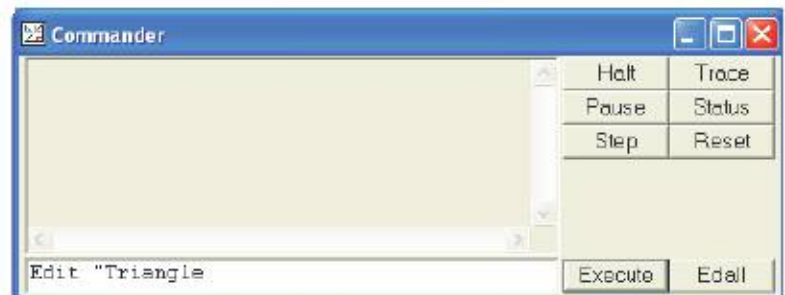

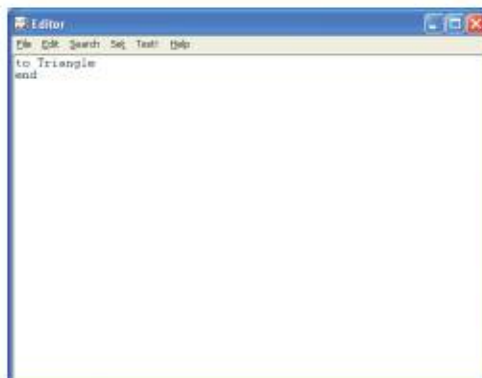

Step 5 : To run the procedure, type square in the input box and press the Enter key.

The square will appear on the MSW Logo Screen.

Method 2 : Using the Editor Window

Step 1 : In the Command Input Box, Type in :

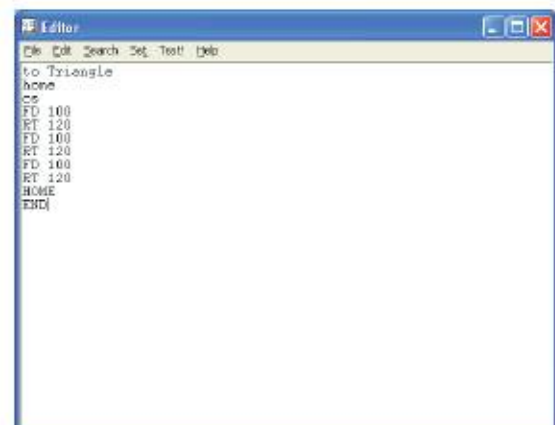

Edit "Triangle" and press enter key. The editor window will appear. Or

You can click on Edall button on the commander window.

Step 2 : Click at the end of to triangle and press enter key.

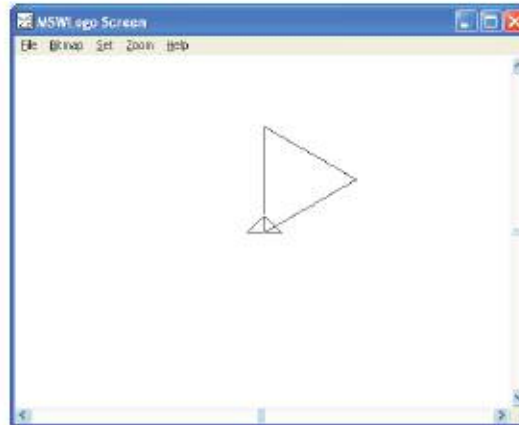

Step 3 : Type the command to produce a triangle.

Step 4 : Click on file menu. Click on Exit option. A dialog box appears.

Step 5 : Click on 'Yes' to save the procedure.

Step 6 : Run the procedure by typing Triangle in Input Box and Press enter key. The triangle will appear on the MSW Logo screen.

Must Know!

Logo file are saved with .LGO extension.

If your file is not saved in C:\MSWLOGO folder, then you will have to give the complete path of the file.

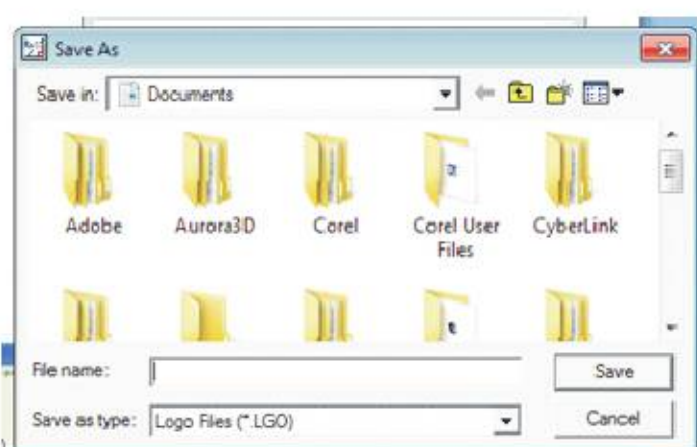

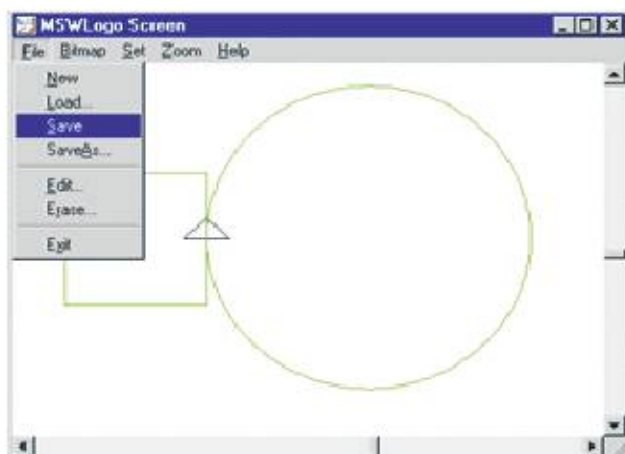

Saving a Procedure

MSW Logo provides the facility to save the procedure on disk. After saving the procedure, it is loaded into computer memory and can be used again. You can save your procedure by two methods :Using file menu or save command.

Using file menu

The steps to save the procedure file are :

Step 1 : Click on File>save option. The save as dialog box appears.

Step 2 : Choose the folder where you want to save your file. Type the file name.

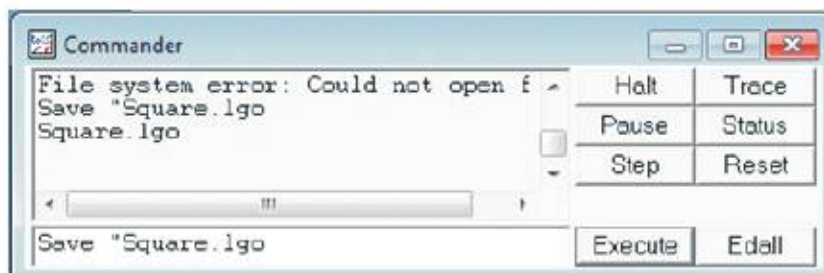

Step 3 : Click on 'Save' button.

Using the save Command

The steps to save the procedure file are :

Step 1 : Click inside the command input box.

Step 2 : Type 'save' command followed by the file name and press Enter key. e.g. Save "Square.lgo and press enter key." Lgo will save the file Triangle.lgo in the MSW Logo folder.

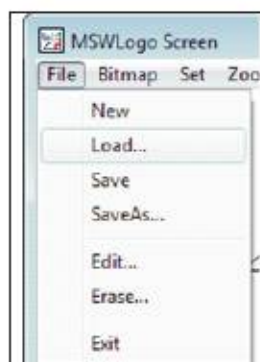

Loading A Procedure

You can use the stored procedure saved in a file by using two methods.

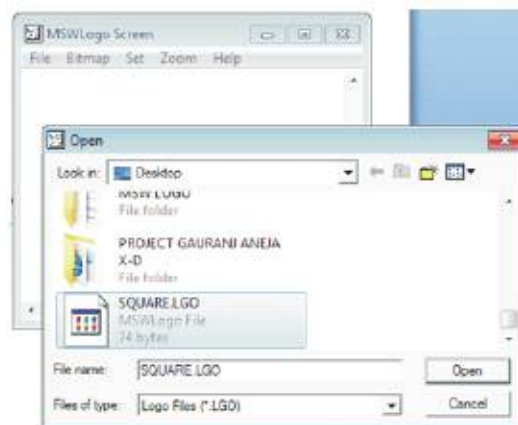

Using file menu or Load command.

Using file Menu

Step 1 : Click on File > Load. The open dialog box is displayed.

Step 2 : Go to the location where you have saved your file.

Step 3 : Select your saved file.

Step 4 : Click on open button.

Using the Load Command

Step 1 : Click inside the command Input box.

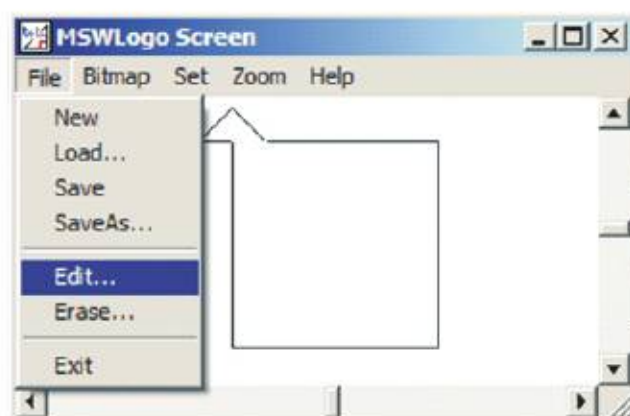

Step 2 : Type the command 'Load' with the filename and press Enter Key.
eg. Load "Square.lgo and Press enter key.

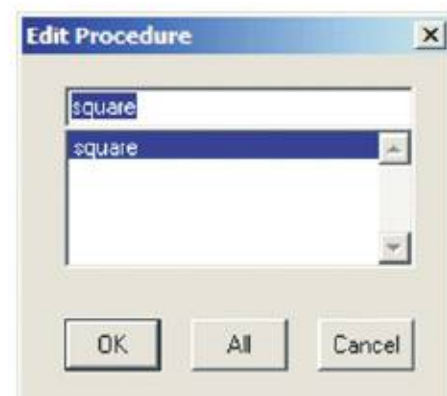

Changing A Procedure

You can make changes in the procedure which you have saved. If you want to make any change in Square procedure, follow the steps :

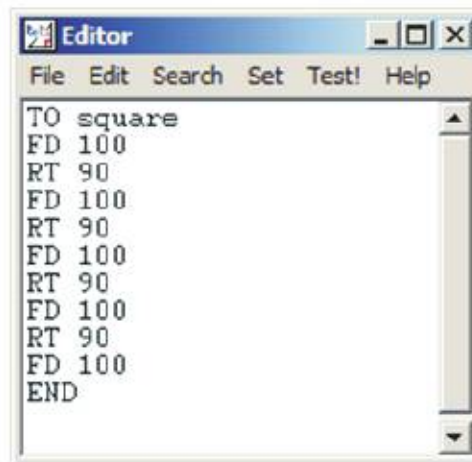

1. Click on the "File" menu and choose "Edit".

2. A dialog box open. Select the procedure and click open button.

3. The procedure will open in the Editor window.

4. Make the changes or correction and save the procedure.

Deleting A Procedure

Follow the steps to delete a procedure.

Step 1 : Click in the command Input box.

Step 2 : Type 'Erase' command followed by the file name and press enter key.
e.g. Erase "Square.lgo and press enter key.

The procedure will be deleted from the computer.

Must Know!

When a procedure is called all the commands written inside it are executed.
The POTS command displays the names of all the available procedures.
The PO command displays the contents of a procedure.

Work Station

A Tick (3) the correct option.

(NEP) Analytical Skills

1. The first line of a Logo Procedure.

(a) Body

☐

(b) End

☐

(c) Title

☐

(d) Print

☐

2. A set of instructions given in a proper order to create a drawing collectively.

(a) Group

☐

(b) Method

☐

(c) Procedure

☐

(d) Circle

☐

3. A procedure can be written in two ways - using the Input box and:
- | | | | |
|--------------------|--------------------------|-------------------|--------------------------|
| (a) Command window | ☐ | (b) Editor window | ☐ |
| (c) Dialog window | ☐ | (d) Main window | ☐ |
4. The extension of Logo language is:
- | | | | | | | | |
|---------|--------------------------|---------|--------------------------|---------|--------------------------|---------|--------------------------|
| (a).Log | ☐ | (b).Lgo | ☐ | (c)*Lgo | ☐ | (d)*lgo | ☐ |
|---------|--------------------------|---------|--------------------------|---------|--------------------------|---------|--------------------------|
5. It contains the commands to draw the desired figure.
- | | | | | | | | |
|-----------|--------------------------|----------|--------------------------|---------|--------------------------|----------|--------------------------|
| (a) Title | ☐ | (b) Body | ☐ | (c) End | ☐ | (d) Home | ☐ |
|-----------|--------------------------|----------|--------------------------|---------|--------------------------|----------|--------------------------|

B Fill in the blanks.

1. A _____ is a set of instruction in Logo.
2. The _____ command is used to list the names of all the procedures.
3. The _____ command displays the contents of a procedure.
4. Logo files are saved with _____ extension.
5. We cannot use _____ to name a procedure.

C Write T for True or F for False.

- | | |
|--|--------------------------|
| 1. A procedure can be saved and loaded from files. | ☐ |
| 2. A procedure can have a maximum of ten commands inside it. | ☐ |
| 3. There can be more than one procedure with the same name. | ☐ |
| 4. Procedures can be called as many times as required. | ☐ |
| 5. In procedure name Blank spaces can be included. | ☐ |

D Answer the following questions.

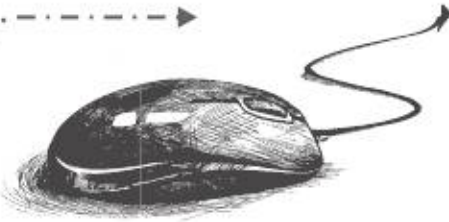

1. Define Command Input Box.

2. Explain an Editor window.

3. Why do we need procedure in LOGO?

4. Write down the structure of writing a procedure.

5. How can you save a LOGO procedure in a file?

Introduction to Windows Movie Maker

Lesson at a Glance

Working with Photos, Video, and Music
Adding Visual Effects

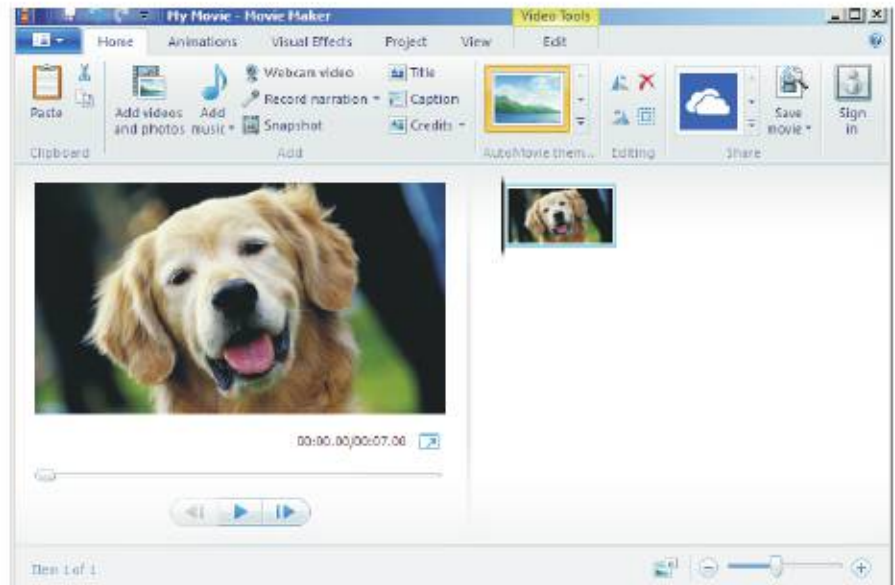

Working with Animations

Windows Movie Maker is the video editing program. It allows you to quickly build a personalized movie that incorporates video, still images, background music and narration.

This movie can be customized further by adding titles, transitions and video effects.

The Movie Maker Interface

- 1. Preview Monitor :** This is where you can view the video as you are editing it, allowing you to preview the changes you are making live.
- 2. Timeline :** This is where you can build and edit your video. You can add multiple videos, pictures and audio clips, splice them together, change the start and end points and add transitions to your video clips. Changes you make to the timeline will then be shown in the preview monitor.
- 3. Toolbar :** This top ribbon will be familiar to you if you use any Office products such as Word, Excel etc. Here you will find all the editing tools to apply to the videos on your timeline. It is also where you will find the File menu, allowing you to save your project and also to export your finished video.

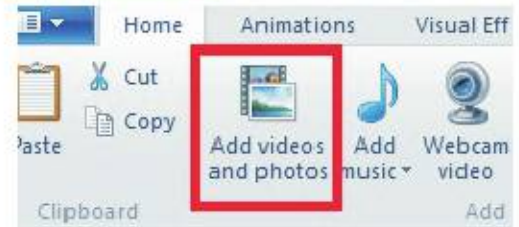

Working with Photos, Video, and Music

Adding Photos

To add photos to your project,

1. Under the Home tab, in the Add box, select Add videos and photos.
2. Browse through the photos in your documents and select the ones you wish to add to the storyboard. Hold the Ctrl key to select multiple photos at once.
3. Your added photos will appear on your storyboard. To rearrange the photos, click on the photo, then drag and drop the photo in the desired space.

Adding Video

There are two ways to import video into your project. You can either click the Add Videos and photos button or click the Click here to browse for videos and photos. Browse to the folder that you created and choose the video you wish to add.

To add video,

1. Under the Home tab, in the Add box, select Add videos and photos.
2. Find the video you wish to add in your documents. The video will then appear on the storyboard among other media you have already added.

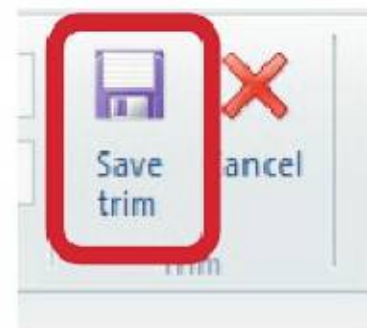

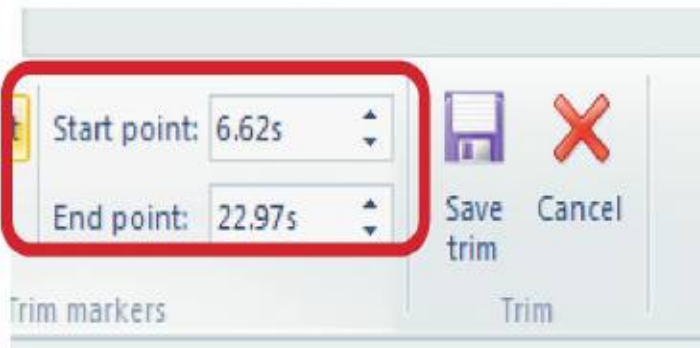

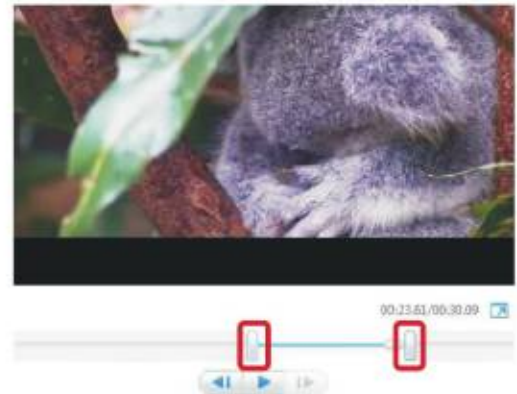

Editing Video

To edit the video,

1. Click on one of the panes for the movie, and on the toolbar, under the Edit tab, click Trim tool.

2. Click and drag the left end bar to set the Start point, and click and drag the right end bar to set the End point.
3. If you already know the exact timing for the start and end points for the clip of the video, simply enter them in the toolbar in Start point and End point.

4. When you have completed trimming the video, click Save trim.
5. To move the location of the video within the project, move as you would a picture. Simply click the image pane of the video, then drag and drop to the desired location.

Adding Music

To add music,

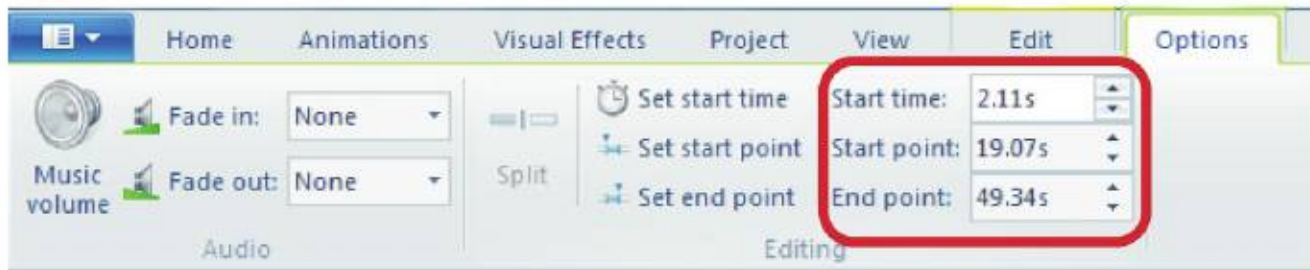

1. Under the Home tab, select Add Music. Choose whether you would simply like to add music and then choose the start time later, or enter music at the exact current point (the location of the moveable black bar).
2. In your music library, choose the music piece you wish to add and click Open. The music sample will then appear above your images and videos.

Editing Music

To edit music,

1. Click the music sample, and then on the toolbar, click Options.

2. The easiest way to set a start time and end time for music in Windows Live Movie Maker is to manually enter the time values. The Start time is the time into the movie the music actually begins playing. The Start point is the time into the selected music clip the music begins playing (example 30 seconds into a song). The End point is the time you wish the music to stop playing (this time is also the time into the selected music clip, NOT the time into the movie).
3. Additionally under the Options tab, specify the Music Volume, if you would like the music to Fade in/out, and the speed at which it will fade.

Note : If you wish to ever remove a music clip, movie clip, or picture/image within your movie, click the media item you wish to remove on the storyboard, and then click Remove under the Home tab in the editing pane.

Working with Animations

Adding Animations

Animations can be added to movies to add special effects to transitions between images and videos. There are transitions which add exciting and eye-catching effects and pan and zoom options which slowly zoom in/out when an image or video is on the screen. To add animations :

1. Click the image or video pane you wish to add the animation to. This is the most important step, because this is how Movie Maker will know where to add the animation. You cannot simply drag and drop an animation to the desired pane you wish.

2. After clicking the pane, it should be highlighted.

3. Under the Animations tab, scroll the mouse over the various transitions and pan and zoom options to get a preview of how the animation will look. When you find an animation you like, click the animation to apply it to the image/video. Use the arrows to the right of the options to scroll up and down to view more animations.

4. To indicate if an image or video has an animation, a transparent triangle will appear on the pane.

Note : To get rid of an animation, click to highlight the pane of the image/video, and then click the blank option at the beginning of the Transitions and Pan and Zoom options.

Adding Visual Effects

Adding Visual Effects

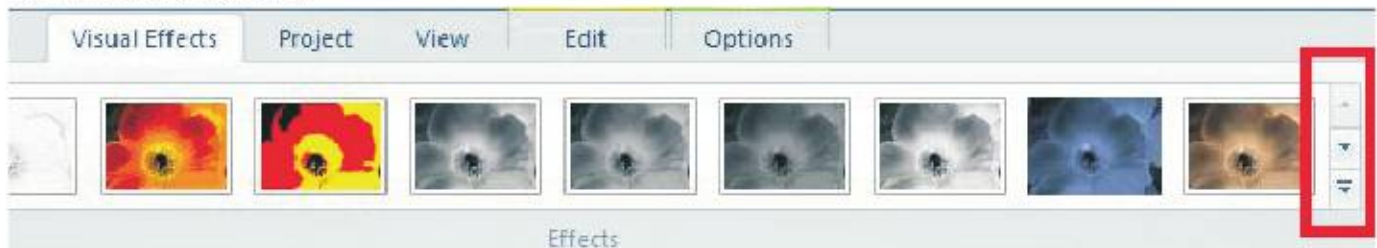

Visual effects can be added to movies to add special effects to the actual images and videos. Users can change colors, add ripple effects, and add other visually stimulating effects to specific images and/or videos. To add visual effects,

1. Click the image or video pane to which you wish to add the effect. This is the most important step, because this is how Movie Maker will know where to add the effect. You cannot simply drag and drop an animation to the desired pane you wish.

2. After clicking the pane, it should be highlighted.

3. Scroll the mouse over the various effect options to get a preview of how the effect will look. When you find an effect you like, click the effect to apply it to the image/video. Use the arrows to the right of the options to scroll up and down to view more effects.

4. When an image or video has an effect applied, it will be designated by a group of icons in the upper left corner as shown below.

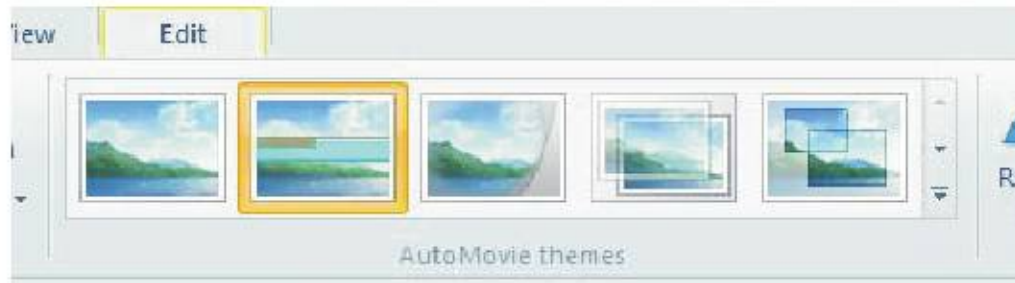

Note : To get rid of an effect, click to highlight the pane of the image/video, and then click the blank option at the beginning of the Effects options.

Auto Movie Themes

Auto Movie Themes are a great shortcut if you want Movie Maker to take your media and create a video for you complete with transitions, introduction slides, etc. To use an Auto Movie Theme,

1. Under the Home tab, in the center of the toolbar is the AutoMovie themes option. Browse through the various options, and roll your mouse over each to view a preview. When you found one you like, simply click the option.

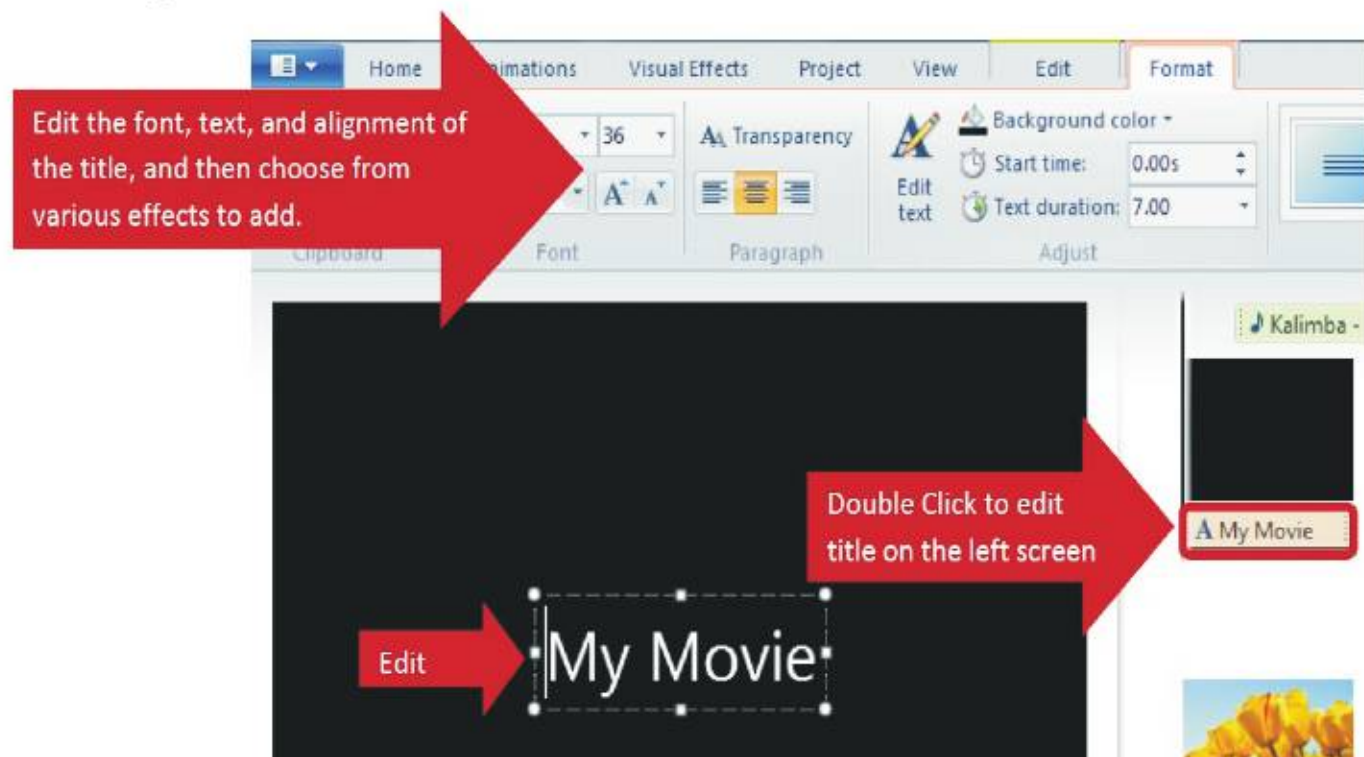

Adding a Title slide

To add a title slide,

1. Under the Home tab, click Title in the Add section.

2. After adding a title slide, a Format tab will appear. To edit the title, double click the current title under the slide on the storyboard, and the text box will appear on the preview.

A Tick (3) the correct option.

(NEP) Analytical Skills

1. To create a personalized movie on computer is used called:
(a) Windows Paint Maker ☐ (c) Windows Movie Maker ☐
(b) Windows Media Maker ☐ (d) Windows File Maker ☐
2. This is where you can view the video as you are editing it.
(a) Preview Windows ☐ (c) Preview Document ☐
(b) Preview Monitor ☐ (d) Preview File ☐
3. This is where you can build and edit your video.
(a) Timeline ☐ (c) Panel ☐ (b) Toolbar ☐ (d) Timebar ☐
4. Here you will find all the editing tools to apply to the videos on your timeline.
(a) Menubar ☐ (c) Statusbar ☐ (b) Filebar ☐ (d) Toolbar ☐
5. It is also where you will find the File menu, allowing you to save your project and also to export your finished video.
(a) Menubar ☐ (c) Statusbar ☐ (b) Filebar ☐ (d) Toolbar ☐

B Fill in the blanks.

1. _____ can be customized further by adding video effects.
2. _____ can add multiple videos, pictures and audio clips, splice them together.
3. _____ can be added to movies to add special effects to transitions between images and videos.
4. _____ can be added to movies to add special effects to the actual images and videos
5. _____ are a great shortcut if you want Movie Maker to take your media and create a video for you complete with transitions.

C Write T for True or F for False.

1. Windows Movie Maker is a video editing software. ☐
2. The changes you make to the panel will be shown in the preview monitor. ☐
3. There are many ways to import video into your project. ☐
4. The easiest way to set a start and end time for music is to manually enter the time values. ☐
5. Transitions add exciting and eye-catching effects and pan and zoom options. ☐

D Answer the following questions.

1. What is Windows Movie Maker?

2. What is Preview Monitor?

3. What is the use of Timeline?

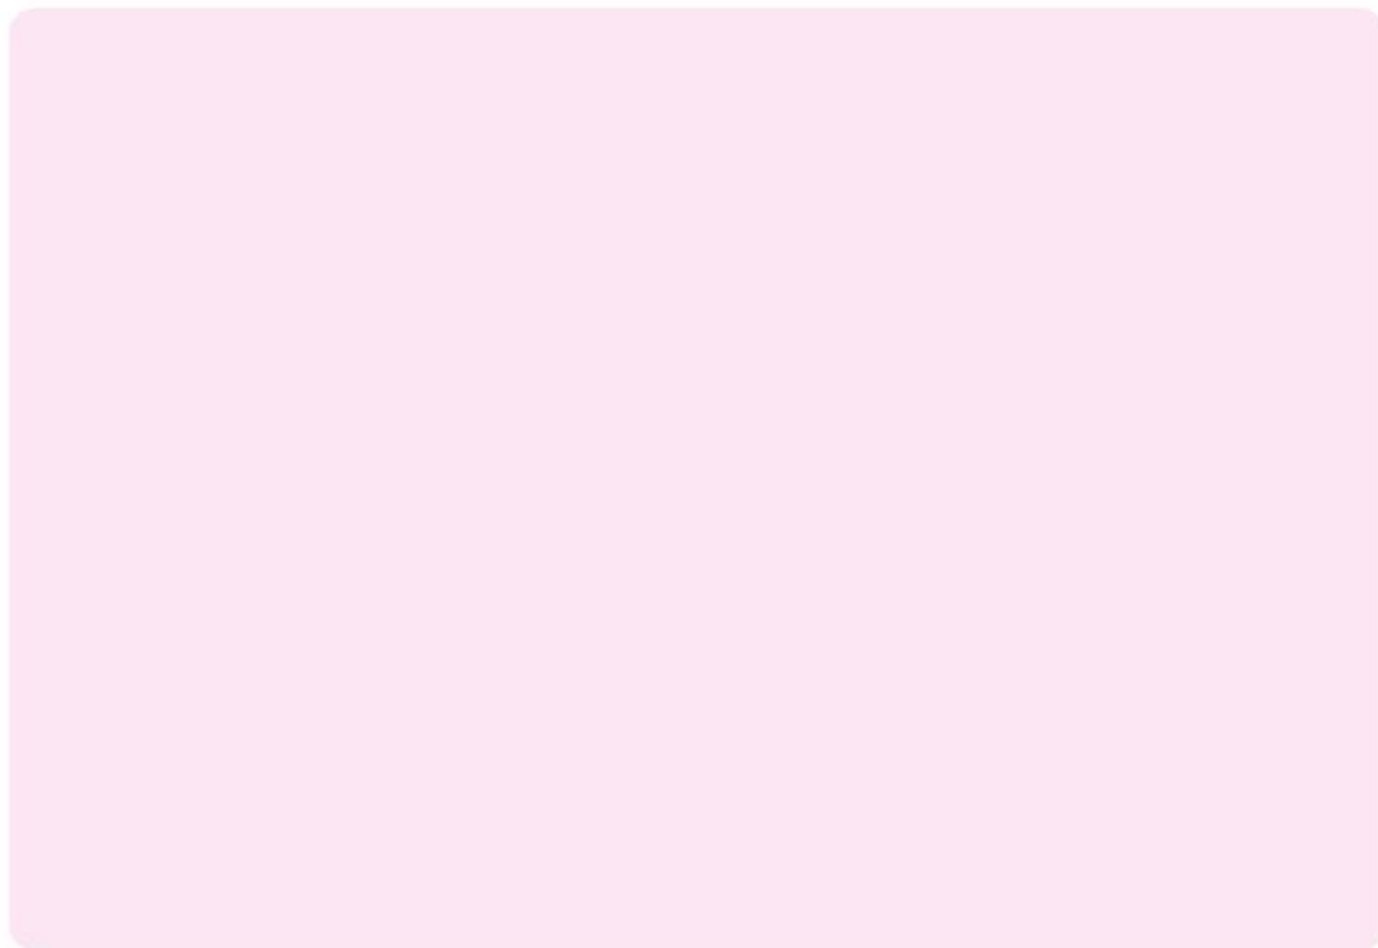

4. What are Visual Effects?

5. What do you mean by Animations?

Services on Internet

Lesson at a Glance

Internet Services
Communication via the Internet

Information Retrieval from the Internet
Introduction to E-commerce

The term Internet is the short form of International Network. It is often called the Net, the Information Superhighway or Cyberspace. The Internet is the largest computer network in the world.

Internet Services

The Internet provides a wide range of services to meet the different requirements of people. These services can be categorized into following types:

- ✓ **Information retrieval :** It is the procedure for gaining access to information stored on the Internet. Net surfing/browsing is the process of obtaining information from the Internet. When your computer is linked to the Internet, you may begin retrieving data.
- ✓ **Communication :** To exchange data/information among individuals or organisation we need communication services. It requires a sender, a message, and a recipient, although the receiver doesn't have to be present or aware of the sender's intent to communicate at the time of communication; thus it can occur across vast distances in time and space.
- ✓ **File Transfer Protocol :** The exchange of data files across computer systems is referred to as file transfer. Using the network or internet connection to transfer or shift a file from one computer to another is known as file transfer. The participants in a file transfer are : FTP client and FTP server.
- ✓ **E-commerce :** Electronic commerce is a business concept that allows business and individuals to buy and sell goods through the internet. It draws on technologies such as mobile commerce, electronic funds transfer, supply chain management, Internet marketing, online transaction processing, electronic data

interchange (EDI), inventory management systems, and automated data collection systems.

Information Retrieval from the Internet

Using a Web Browser

A web browser is a software application for retrieving, presenting, and traversing information resources on the World Wide Web. Although browsers are primarily intended to access the World Wide Web, they can also be used to access information provided by web servers in private networks or files in file systems.

Search Engines

A search engine is an information retrieval system designed to help find information stored on a computer systems accessed through the means such as the World Wide Web. The search engine allows you to make a query usually with a word or phrase and retrieves a list of items that best match the criteria you have requested.

Communication via the Internet

The Internet carries a vast array of communication services. Most traditional communications media, such as telephone and television services are reshaped or redefined using the technologies of the Internet.

Let us learn more about these services :

What is an Electronic Mail?

E-mail (electronic mail) is the exchange of computer stored messages by telecommunications. You can also send non-text files, such as graphic images and sound files, as attachments. It has three main parts Header, Message body and Signature.

Using Instant Messaging

The Internet has revolutionized the way we communicate. With IM, you can keep a list of people you interact with. You can do IM with anyone on your list or contact list as long as that person is online. You type messages to each other into a small window that shows up on both of your screens.

Newsgroups

A discussion group is an online forum for individuals to discuss various topics amongst each other. People add their comments by posting a block of text to the group. Others can then comment and respond. Discussion groups differ from

chatrooms and instant messaging because they usually deal with one topic and personal exchanges are typically discouraged.

Online Newspapers

An online newspaper, also known as a web newspaper, is a newspaper that exists on the World Wide Web or Internet, either separately or as an online version of a printed periodical.

Social Networking

Facebook is a social networking service and website launched in February 2004. Users may create a personal profile, add other users as friends, and exchange messages, including automatic notifications when they update their profile. Facebook users must register before using the site. Users may join common-interest user groups, organized by workplace, school or college, or other characteristics.

Blogs

A blog is a type of website or part of a website. Blogs are usually maintained by an individual with regular entries of commentary, descriptions of events, or other material such as graphics or video. Blog can also be used as a verb, meaning to maintain or add content to a blog.

Video Conferencing

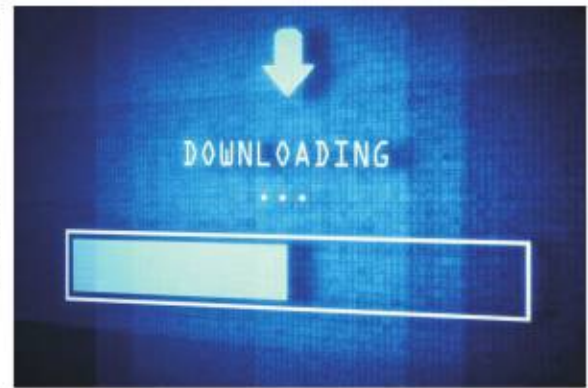

Videoconferencing is the conduct of a videoconference by a set of telecommunication technologies which allow two or more locations to interact via two-way video and audio transmissions simultaneously. It has also been called 'visual collaboration' and is a type of groupware.

Downloading

Downloading indicates the receiving of data that is used immediately as it is received.

Download implies specifically "receive and save" instead of simply "receive". It is also important to note that "downloading" is not the same as "transferring". Sending/receiving data between two storage devices would be a transferring of data, but receiving data from the Internet would be considered a download of data.

Online Chat

Online chat may refer to any kind of communication over the Internet, that offers an instantaneous transmission of text-based messages from sender to receiver.

Communication Protocols Used on the Internet

Telnet : TELNET is a term used to imply remote login. It is the ability to access and work on a computer somewhere on the Internet. It allows you to log into the computer and use the software and data files present in it.

Gopher : It is a menu-based information retrieval tool. It is used to search the keywords to get the closest menu. It was used to retrieve information by linking up to Telnet. It was very popular www came into existence.

FTP : File Transfer Protocol (FTP) is used to transfer information in the form of file from one user computer to another computer. It's also commonly used to download programs and other files to user's computer from other servers.

HTTP Protocol : Hypertext Transfer Protocol (HTTP) is a secure method of accessing or sending information across a web page. It is the foundation of data communication for the World Wide Web.

Introduction to E-commerce

Electronic commerce, commonly known as e-commerce, or e-comm, refers to the buying and selling of products or services over electronic systems such as the Internet and other computer networks. However, the term may refer to more than just buying and selling products online. It also includes the entire online process of developing, marketing, selling,

delivering, servicing and paying for products and services. E-commerce are specially designed and have some extra features.

There are three modes of E-commerce available at present. These are:

- ✓ Business-to-business
- ✓ Business-to-Customer
- ✓ Digital Middleman

Business-to-Business

Business-to-business (B2B) describes commerce transactions between businesses, such as between a manufacturer and a wholesaler, or between a wholesaler and a retailer. Contrasting terms are business-to-consumer (B2C) and business-to-government (B2G).

For example, an automobile manufacturer makes several B2B transactions such as buying tires, glass for windscreens, and rubber hoses for its vehicles.

Business-to-Customer

Online shopping is the process whereby consumers directly buy goods or services from a seller in real-time, without an intermediary service, over the Internet. It is a form of electronic commerce. An online shop, e-shop, e-store, internet shop, webshop, webstore, online store, or virtual store evokes the physical analogy of buying products or services at a bricks-and-mortar retailer or in a shopping centre.

Digital Middleman

Digital Middleman refers to a company which provides information about several companies on a single website. This company gathers information from other companies about the same type of products or services. A commission is charged for every sale or purchase by the company hosting the website.

E-commerce Payment System

An e-commerce payment system facilitates the acceptance of electronic payment for online transactions. Also known as a sample of Electronic Data Interchange (EDI).

There are numerous different payments systems available for online merchants. These include the traditional credit, debit and charge card but also new technologies such as digital wallets, e-cash, mobile payment and e-checks.

E-Commerce Payment Systems

one of the modes of electronic payments are following.

- Credit Card
- Debit Card
- Smart Card
- E-Money
- Electronic Fund Transfer (EFT)

E-Greetings Cards

An e-card is created using digital media instead of paper or other traditional materials. E-cards are made available by publishers usually on various Internet sites, where they can be sent to a recipient, usually via e-mail.

E-Shopping

Online shopping is the process whereby consumers directly buy goods or services from a seller in real-time, without an intermediary service, over the Internet. It is a form of electronic commerce. The process is called Business-to-Consumer (B2C) online shopping.

E-Education

Commonly referred to as online education, is the process of learning online. The flexibility of online learning is particularly helpful for working professionals who want to return to school, but need to remain employed to support their families.

E-Reservation

An online reservation system is a user friendly means for consumers and website visitors to book and pay for accommodations or other tourism products or services immediately, in real time over the internet. The e-reservation facility liberates us from the task of visiting an airlines office or a railway reservation counter, etc. to reserve our journey tickets.

A Tick (3) the correct option.

(NEP) Analytical Skills

1. It is a software for retrieving information on the WWW.

(a) blog ☐ (b) facebook ☐ (c) browser ☐ (d) search engine ☐

2. It is a type of website or part of a website.

(a) blog ☐ (b) newspaper ☐

(c) chatting ☐ (d) none of the above ☐

3. E-learning is a:
 - (a) class room program ☐
 - (b) video conferencing program ☐
 - (c) learning technology anywhere at anytime ☐
 - (d) None of these ☐
4. Chatting is communication through:

(a) text messages ☐	(b) voice messages ☐
(c) video interface ☐	(d) All of these ☐
5. Doing banking using web is called as:

(a) phone banking ☐	(b) e-banking ☐
