Publication of Key to this book is strictly prohibited.

Every effort has been made to avoid errors of omission in this Publications. In spite of this, some errors might have crept in. Any mistake, error or discrepancy noted may be brought to our notice which shall be taken care of in the next edition. It is notified that neither the Publishers nor the authors, seller will be responsible for any damage or loss of action to nay once, of any kind in any manner, therefrom.

For binding mistakes, misprints or for missing pages, etc., the publishers' liability is limited to replacement within one month of the purchase by a similar edition. All expenses in this connection are to be borne by the purchaser.

FORWARD

Social Circle is a graded series of the books on Social Studies for class 1 to class 8. It introduces the students to geography, history and civics and other aspects of life. The world is becoming increasingly smaller. We are more aware and connect easily with the events of the world. Today the world is observed as a whole and not just as an individual society or a nation. Our series introduces the global world to the students in a gradual manner. Special emphasis has been laid on creating awareness about the society and environment among the students.

This series conforms to the **National Education Policy (NEP)** Scheme prescribed by the **NCERT** for the teaching and learning of Social Studies in an interactive manner.

The salient features of this series are:

- The text uses simple language, attractive illustrations and photographs and maps to explain concepts.
- Each chapter contains **Just Rewind Up** that reminds the whole chapter at a glance.
- **Work Station** includes a variety of questions such as Multiple Choice Questions (MCQs), Fill in the blanks, True/False, Matching the Columns, Answer the following questions and name the following, etc.
- **Funny Tasks** includes a variety of interdisciplinary activities such as write Right, Puzzles, Project work, etc.

Suggestions for the further improvements of the series will be gratefully acknowledged and incorporated in subsequent editions.

—Publishers

Incorporates NEP 2020

Created with new dimension of joyful learning along with completely mapped parameters of National Education Policy, 2020

Critical Thinking

Strengthening decision making and innovation

Art Integration

Promoting art based learning

Computational Thinking

Enables to help solve problems and make thinking more engaging.

Inter Disciplinary

Connects knowledge across the curriculum for holistic development

Subject Enrichment

Aimed at understanding and skill developing in specific subject

Communication

Emphasis on soft skills and power of language

Experimental Learning

Encourages learning by doing through hands-on activities.

Life Skills and Values

Inclined towards empowering moral values in learner

Creative Learning

Thinking out of the box.

INSIDE

THE BOOK

Key Features includes the topics to be learnt in the chapter.

KEY FEATURES

- The Globe
- Languages of Maps
- Understanding Time Zones
- The Maps
- Mapping the Earth
- Type of Maps

Informative has some facts related to chapter to enhance the knowledge of the students.

Informative

A tributary is a small river which adds water to the main river, but a distributary is a branch of river which flows away from the main stream and does not return to it.

Just Rewind Up contains something important to remind the chapter at a glance for doing exercises.

Just Rewind Up

- ▶ People living near our houses are our neighbours.
- ▶ The area around our houses makes a neighbourhood.
- ▶ We should help our neighbours in need.
- ▶ We can dial 100 for police in need.
- ▶ We can dial 101 for fire brigade in need.
- ▶ We can dial 102 for ambulance.

Work Station contains some exercises to test the knowledge about the chapter.

Work Station

A

Tick (✓) the correct answer :

Analytical Skills

1. We get medicines from :
(a) post office ☐ (b) medical store ☐
2. We buy postcards from :
(a) post office ☐ (b) police station ☐

Funny Tasks provides some interesting experiments based on chapter contents.

FUNNY TASKS

- Look at the pictures of foods and write the sources where you get these:

Problem Solving

Life Skills and Values includes the life skills and values questions.

LIFE SKILLS AND VALUES

Make a list of food-items you have in your breakfast, lunch and dinner. Also write, is it a balanced diet?

Contents

Unit 1 The World : Our Home

- | | |
|-------------------------|----|
| 1. Conquering Distances | 7 |

Conquering Distances

In this chapter, you will learn about transportation, kinds of means of transportation, roadways, railways (land transportation), waterways and airways.

Children, you know that there was no means of transport in olden times. The early men used to go on foot from one place to another. They carry their goods on their back or shoulders from one place to another. It was very difficult for people to travel.

Later on, man made a cart without wheels. It was called the **sledge**. It was pulled by the animals or the people themselves. After thousands of years, man invented a wheel. He started using the wheels in his sledge.

The invention of the wheel brought about a great change in the field of transport. But it was the invention of the **steam engine** which proved to be the turning point in the life of human beings. The first steam powered vehicle for transport was a complete revolution. It was invented by **James Watt** in England. These engine powered vehicles were more dependable. They could carry heavy loads and move much faster.

James Watt

Transportation

Transport or transportation is the movement of people and goods from one place to another. Modes of transport include **air, rail, road, water, cable, pipeline** and **space**.

Informative

Wheel is the most important invention in the field of transport.

• Kinds of Transportation •

We need different means of transport for different purposes. The present system of transport can be grouped under **land**, **water** and **air** transport. Land transport includes roadways and railways.

Land Transport : Roadways

Roads are needed for smoother and faster movement of vehicles. There are special broad roads in many countries that connect major cities. These are called **national highways**, **freeways** or **expressways**. India has many such roads.

The roads of a country are often connected to the roads of another country. These are called **international highways**. All the countries of Europe are connected with one another by a large network of roads.

India too is connected by road with her neighbours such as Pakistan, Nepal, Bhutan and Bangladesh. The **Grand Trunk Road** runs between Kolkata in India and Peshawar in Pakistan. It was built by **Sher Shah Suri**. India is also connected to China through the Hindustan-Tibet Road.

These means of road transport cause pollution. Dust and smoke from vehicles pollute the air. The number of road accidents is increasing. Most countries are making strict rules for safer driving and pollution control.

Railways

Railways is one of the most important means of transport. They are convenient for travelling long distances. They also carry heavy goods over long distances.

The development of railways began with the invention of steam engines and iron rails. Now, railway engines run on diesel or electricity. The development of railways has played a big role in the growth and distribution of industries in different parts of the world.

Network of Indian Railways

The British Government introduced railways in India. The first train in India ran in 1853 from Mumbai to Thane. Today, all major cities, towns and other regions are connected by railways. Many superfast trains have also been introduced in our country. A number of heritage trains, which are reconstructed, have been introduced specially for foreign tourists. The **Deccan Queen** and the **Palace on Wheels** are two examples.

The railway network is more extensive in Europe and North America than anywhere else in the world. In South America, Africa, Australia and Asia, however, the network is not as good as Europe and North America.

The United States of America has the largest railway network in the world. India has the second largest railway network in Asia and the fourth largest in the world.

In some countries, railways connect cities on the eastern coast with those on the western coast. These railway lines are called **Trans-Continental Railways**. USA, Canada and Australia have such railway networks.

Stretching across Europe and Asia is the **Trans-Siberian Railway**. This line runs between St Petersburg in European Russia and Vladivostok in Asian Russia. This train covers a distance of about 8,000 km in seven days. The **Grand Orient Express** connects Paris to Istanbul.

Japan, France, Germany and China have some of the fastest trains in the world. They can run at a speed of over 400 km per hour. The **Bullet train** of Japan, the **Maglev** of China and the **TGV** of France run very fast.

Waterways

Rafts and boats were the olden means of waterways. The increase in trade demanded improvements in boat-making. New boats fitted with steam engines were built. These boats were called **ships**. They could carry more goods and also move faster.

Railway Network

Major Ocean Routes

Nowadays, there are many big ships which run on steam and diesel engines. They carry raw materials and finished goods from one place to another. Waterways are cheaper than other means of transport. This is because unlike roads and railways. Waterways requires only ports for loading and unloading.

The cheaper cost of transportation of waterways has encouraged trade in agricultural raw materials such as cotton, tobacco, rubber, wheat and mineral ores. Petroleum is carried in special ships called **oil tankers**. Vegetables, fruits, meat and dairy products are transported in **refrigerated ships**. The busiest sea route in the world is between Eastern North America and Western Europe. It is called the **North Atlantic Route**. India has a 6,000 km long coastline. The Major seaports of India are well connected with the rest of the world.

The rivers **Ganga** and the **Brahmaputra** are used as waterways in India. The **Yangtze Kiang** and **Hwang Ho** in China, the **Rhine** and **Danube** in Europe, the **Nile** and **Congo** in Africa and the **Amazon** in South America are busy waterways. In North America, the **Great Lakes** are also used as waterways.

The **Suez Canal** and the **Panama Canal** have reduced travel time. The Mediterranean Sea and the Red Sea are joined by the Suez Canal. It is about 17 km long and about 150 m wide. It was completed in 1869. Now, one can go from India to England in just 15 days whereas earlier it would take as much as six months.

The Atlantic Ocean and the Pacific Ocean are joined by the Panama canal. It was completed in 1914. The canal is about 82 km long. A ship can cross it in just eight hours. Before it was built, ships had to go around the southern tip of South America while going from the Atlantic Ocean to the Pacific Ocean.

Airways

It is the fastest and most expensive means of transport. The first successful attempt to fly was made by the **Wright Brothers** in 1903. They invented an aeroplane and named it 'The Flyer'. It stayed in the air for 12 seconds and covered a distance of about 230 metres.

Airways in the World

people travel to different parts of the world by air. Cities such as London, Paris, New York, Moscow, Tokyo, Rome and Jeddah have large airports with modern facilities.

India is well connected to all the countries by the airways. Now, we have so many airlines offering tickets at affordable prices that people prefer aeroplane to trains or buses because they are faster and less tiring. Delhi, Mumbai, Kolkata, Amritsar, Thiruvananthapuram, Hyderabad and Chennai are some of the international airports of India.

India's main five airports are as follows :

1. **Indira Gandhi International Airport**, Delhi
2. **Sahar International Airport**, Mumbai
3. **Meenambukkam International Airport**, Chennai
4. **Subhash Chandra Bose International Airport**, Kolkata
5. **Thiruvananthapuram International Airport**, Karala.

Helicopter is very small aircraft. It carries a few passengers. It is very useful for dropping food and medicines in the remotest areas as well as to rescue people trapped in isolated areas. It can land in a small area.

- ▶ There was no means of transport in ancient times.
- ▶ Man invented wheel before thousands of years ago.
- ▶ James Watt invented the steam engine.
- ▶ Roads are needed for smoother and faster movement of vehicles.
- ▶ The first train in India ran in 1853 from Mumbai to Thane.
- ▶ The earliest means of water transport were rafts and boats.
- ▶ The first successful attempt to fly was made by the Wright Brothers in 1903.

Work Station

A

Tick (✓) the correct answer :

Analytical Skills

1. Steam engine was invented by :
 (a) Wright Brothers ☐ (b) Marconi ☐ (c) James Watt ☐
2. Suez Canal is suitable for :
 (a) airways ☐ (b) waterways ☐ (c) roadways ☐
3. The man first invented the :
 (a) train ☐ (b) wheel ☐ (c) aeroplane ☐
4. In India, train ran first in :
 (a) 1853 ☐ (b) 1953 ☐ (c) 2002 ☐

B

Fill in the blanks :

Experiential Learning

1. Dust and smoke from vehicles pollute the _____.
2. The _____ introduced railways in India.
3. G.T. Road runs between _____ in India and _____ in Pakistan.
4. The _____ has the largest railway network in the world.

C

Tick (✓) for the true and cross (×) for the false statements :

Critical Thinking

1. Suez Canal is useful for waterways. ☐

2. Cargo ships are useful to carry loads.
3. Trans-Siberian railways runs in India.
4. Helicopter can be landed in a small place.

D

Answer the following questions :

1. Where are the most dense air routes?
2. How did the people move in ancient time?
3. Which is the turning point in the world of transport?
4. Which is the fastest means of transport?
5. How many types of means of transport are there?
6. When and where did the first train run in India?

- **Mark five international airports on the map of India. Write a short note on each.**
Creativity
- **Find out some interesting information about the Wright Brothers and their Work. Make charts and models of their invention. Take the help of your teacher or parents.**
Scientific Temper

LIFE SKILLS AND VALUES

Modern means of transport are very helpful to us for travelling but they cause pollution. Discuss with your friends, how to control the pollution.

Communication

To express our ideas, we have two types of means of communication : Personal Communication and Mass Communication.

Children, you know that our many relatives and friends live far from us. We send our messages to them and they send to us. This sending and receiving messages is called the **communication**. The means which are used to send or to receive the messages are called the **means of communication**.

You should know that there were no means of communication before some centuries ago. People used to send their messages through pigeons, hawks and horse-riders. It was very difficult to send any message at a proper time to other places.

In ancient times, people did not know how to read and write. They used signs to express their ideas or emotions. They learnt to draw pictures on the walls to express themselves.

It was only 5000 years ago that the men were able to write. They had no paper as we have. So they wrote on the bark and leaves of the trees.

But nowadays people are able to read and write their messages. They have many modern means of communication to send their messages.

Kinds of Means of Communication

To express our ideas, we have two types of means of communication :

1. Personal Communication
2. Mass Communication

1. Personal Communication

When the people communicate with one another or send message to the friend and relative, it is called the **personal communication**.

Some means of personal communication are as follows :

Post Office

Postal service is the oldest means of communication. We buy postcards, envelopes, inland letters from the post office. After writing our messages, we drop them into a letter box. Postman takes out all the letters from the letter box and fixes stamp on them. Then the letters are sent to their addressees. Important or urgent letters can be sent through registered post or courier. It is the most widely used means of communication.

Telephone

Telephone was invented by **Graham Bell** in 1876. Verbal communication started with the invention of telephones. Nowadays telephones have become an important need of every family. Every village has telephone connections. Now one can dial a number and talk to a person thousands of miles away instantly. With the help of **STD** and **ISD**, one can talk directly with anyone, anywhere in the world from one's home.

Now with the advent of mobile phones, there is not a single second in a day when person is not accessible. We can also send and receive messages and pictures through some mobiles. The added advantage is that the internet can also be accessed through mobile phones, known as I-phones. One can carry these mobiles anywhere and make or receive calls even while travelling by car, train, aeroplane or ship. Mobile phones have become very popular nowadays.

Informative

When Alexander Graham Bell passed away in 1922, every telephone served by the Bell system in USA and Canada was silent for one minute.

Teleprinter

We can send our printed messages to any place through the teleprinter. A teleprinter prints the messages at the receiving place. All the countries of the world have now direct teleprinter services connected with one another.

Fax Machine (Facsimile)

A fax machine is used to copy a printed matter or the pictures. The fax machine is connected to a telephone line. The exact copy of the printed matter reaches the receiver instantly. Faxing is also another means of sending messages and pictures quickly.

E-mail

The most popular way to send our messages is through electronic mail or E-mail. It is a relatively new system of sending and receiving messages with the help of computer and internet connection. The messages reach anywhere in the world. This method is cheaper and can be used for all purposes—official and personal.

2. Mass Communication

‘Mass’ means ‘crowd’ or a ‘large number of people’. When messages are sent to a large number of people at the same time, it is called the mass communication. Books, magazines, newspapers, radio, television, cinema, advertisements are the main means of mass communication.

Radio

Radio is the oldest means of mass communication.

We listen many programmes, conversations, songs on radio. It was invented by **Guglielmo Marconi** in 1886. Radio stations at different places in a country are established to broadcast the programmes. The radio gives us programmes on national and international news, movies, music, drama and even education programmes. In India, radio broadcast was started in 1927.

Television

It is the most popular means of mass communication. Television was invented by **John Logie Baird** in 1926. With this, he gave entertainment a whole new meaning. For the first time, people were able to watch pictures in a machine. Over the years, TV evolved from the humble box which produced

black and white images to the ones we see now, full of colours and lots of channels. Television enables us to watch live scenes such as news, sports, etc. Movies are also shown on television. The television has brought the people of the world closer.

Newspapers and Magazines

Newspapers are of three types such as local, national and international. We get the newspapers early in the morning and read all types of news of the country and abroad.

Magazines are a type of book. These are published weekly, monthly, half-yearly and annually. They contain story-type news and articles of our great scholars.

Informative

The first newspaper was published by Julius Caesar in Rome. This was in the year 60 BCE. The newspaper was titled Acta Durna.

Cinema

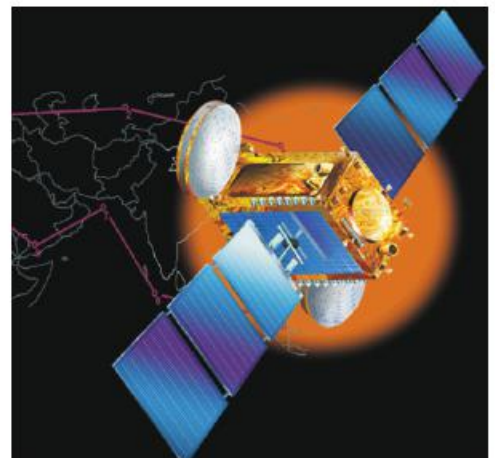

It is one of the most popular means of communication. It is not only fun to watch, but it is also educative and informative. We have documentary and educational movies. Films and documents are regularly exchanged among different countries of the world. International film festivals are held to share good films from different countries. Thus, people come to understand the lifestyle, values and problems of other people.

Internet

A general sense, an internet (with a lower case “i”) is a computer network that connects several other networks. The art of connecting networks in this way is called **internet-working**.

It has become the most popular means of communication.

Nowadays **satellite** is the most important means of communication. These satellites help in telephone, radio, television communication all over the world.

- ▶ Sending and receiving messages is called communication.
- ▶ Means of communication are of two types : personal communication and mass communication.
- ▶ Postal services, telephones, teleprinter, fax machine, e-mail, etc. are the means of personal communication.
- ▶ Radio, television, newspapers and magazines, cinema, internet, etc. are the means of mass communication.

Work Station

A

Tick (✓) the correct answer :

Analytical Skills

1. The oldest means of personal communication is :
 (a) telephone ☐ (b) post office ☐ (c) internet ☐
2. Telephone was invented by :
 (a) Einstein ☐ (b) Marconi ☐ (c) Graham Bell ☐
3. The oldest means of mass communication is :
 (a) radio ☐ (b) television ☐ (c) telephone ☐
4. Radio was invented by :
 (a) Graham Bell ☐ (b) Marconi ☐ (c) Einstein ☐

B

Fill in the blanks :

Experiential Learning

1. We can send our printed messages with pictures through _____ .
2. The word 'mass' means _____ .
3. Radio is a means of _____ communication.
4. We can see live telecast on _____ .

C

Tick (✓) for the true and cross (×) for the false statements :

Critical Thinking

1. We can only listen programmes on television. ☐
2. We can see live scene on radio. ☐

3. Before some centuries, people sent their messages through pigeons.
4. In ancient time, people did not know how to read and write.

Writing Skills

D

Answer the following questions :

1. How many types of means of communication are there?
2. What do you mean by mass communication?
3. What do you mean by communication?
4. Which is the oldest means of personal communication?
5. Differentiate between radio and television.

- **Read the newspaper every day. Cut out four important news items and paste them in your scrapbook.**

Creativity

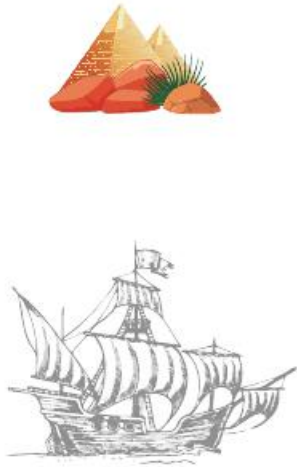

- **Write three means of:**

1. Personal Communication :

(a) _____ (b) _____ (c) _____

2. Mass Communication :

(a) _____ (b) _____ (c) _____

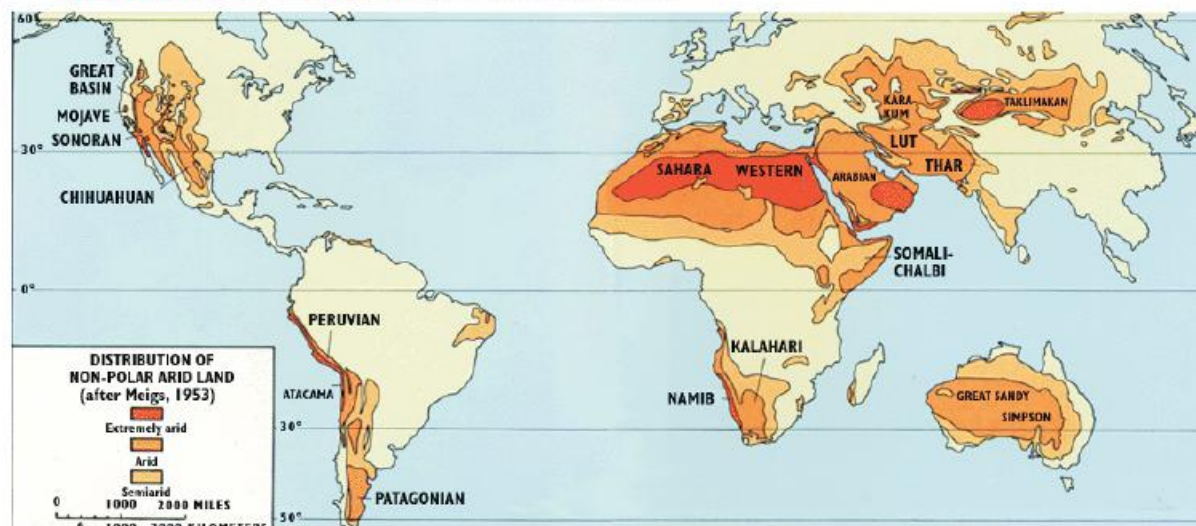

Life in the Tropical Deserts

There is a great contrast in the climate of hot wet regions. There are many differences between the lives of the people of both the regions.

Children, in the last chapter, you have learnt about the life of the people of the hot-wet regions. There is a great contrast in the climate of hot-wet regions and that of the Tropical deserts. In the hot-wet regions, it rains heavily throughout the year but in deserts, it rains very little. Therefore, there are many differences between the lives of the people of both the regions. In this chapter, you will study about the life of the people living in tropical deserts of the world.

Tropical deserts in the world are as follows :

- ◆ Sahara (North Africa)
- ◆ Arabia and Thar (Asia)
- ◆ Kalahari and Namib (South Africa)

Tropical Deserts of the World

- ◆ Desert of California (North America)

- ♦ **Atacama** (South America)
- ♦ Desert of **Western Australia** (Australia)

To study about the people living in the tropical deserts, we take up Saudi-Arabia, the main country of the Arabian Desert.

Location

The tropical deserts are located between 20°–30° north and south latitudes on the western side of continents.

Saudi Arabia is a country in the Middle East. It is located in the Arabian desert. It occupies about four-fifth of the Arabian Peninsula. It is surrounded by the sea on three sides. Most part of Saudi Arabia is a rocky plateau. It is a sandy area broken by rocky hills. There are narrow coastal plains along its western and eastern coasts.

Saudi Arabia

Climate and Vegetation

Saudi Arabia experiences very critical climatic conditions. During summers, the temperature may reach upto 50°C or even more. The days are very hot. In winter also, the days are hot and nights are cold. This area receives very little rainfall. Due to such type of critical conditions, sands become extremely hot. Strong dusty winds blow here, sometimes with very great speed. These winds cause **dust-storms**. They make sand-dunes. These winds do not blow from the sea. Instead, they come from the interior of the continent. These dry winds are called **trade winds**.

Desert

The Sandstorm

Due to the shortage of water, there is less vegetation found in Saudi Arabia. It rains scarcely for a month throughout the year. Hence, a few grasses grow here and there. But mostly you will find shrubs and cactus in this region because they need very little water to grow. Some waterly spots are also found here. These

spots are called **oases**. In these oases, trees of date palms can be found.

Lifestyle of the People

The life in the deserts is very difficult for the people. They have to face many difficulties, mostly for water, food and pastures. The people who live in the desert areas, are called **Bedouins**.

They lead their nomadic life. They domesticate goats, sheep, camels. They wander from place to place in search of food and water. They get wool, meat and milk from their animals and sell to others. They wear long and loose clothes. Both men and women cover their heads with white clothes. The women wear colourful clothes and they are also fond of wearing heavy ornaments.

Political Life

Riyadh is the capital city of Saudi Arabia. **Jeddah** is a famous seaport. **Mecca** and **Medina** are the greatest centres of pilgrimage of the Muslims all over the world. The followers of Islam come to these places every year in a large number.

Informative

The pipelines are made underground here. It is the cheapest means of transportation for crude oil.

Wide metalled roads are found here. Multi-storeyed, air-conditioned modern buildings, schools, big hospitals, colleges and universities are found here. The Super Market and the Departmental Stores are full of imported items.

Occupations

The main occupations of the people of Saudi Arabia are petro-chemicals, chemical fertilisers, plastic, textiles, soap, leather, cement, etc. **Dammam** and **Yanbu** are the main business centres of Saudi Arabia.

A lot of mineral oil is taken out and refined into petroleum and other products. After it, these products are sent to the ports through the huge pipe-lines. From the seaports these products are exported to the other countries of the world.

- ▶ Saudi Arabia is a desert land which occupies about four-fifth of the Arabian Peninsula.
- ▶ The climate of Saudi Arabia is extremely hot and dry.
- ▶ Sand dunes are the small hills of sand. Some crops are grown around the oasis.
- ▶ The nomadic people of Saudi Arabia are called Bedouins.
- ▶ Mecca and Medina are the holiest places of the Muslims.

Work Station

A

Tick (✓) the correct answer :

Analytical Skills

1. The pilgrimage centres are :
 (a) Mecca ☐ (b) Medina ☐ (c) both of them ☐
2. Saudi Arabia earns a lot of money by exporting :
 (a) machines ☐ (b) foodgrains ☐ (c) petroleum ☐
3. 'Thar' desert is located in :
 (a) Africa ☐ (b) Asia ☐ (c) South America ☐
4. The capital of Saudi Arabia is :
 (a) Mecca ☐ (b) Riyadh ☐ (c) Jeddah ☐

B

Fill in the blanks :

Experiential Learning

1. _____ are called nomads.
2. _____ is the capital city of Saudi Arabia.
3. The temperature may reach upto _____ or even more.
4. The _____ are called trade winds.
5. Main occupation of people of Saudi Arabia is _____.

C

Tick (✓) for the true and cross (×) for the false statements :

Critical Thinking

1. Tropical deserts are found near the equator. ☐
2. Saudi Arabia is rich in mineral oil. ☐

3. Date palms are found in the deserts.
4. Dammam and Yanbu are the port cities of Saudi Arabia.
5. The markets in Saudi Arabia are full of imported goods.

D

Match the following :

Critical Thinking

A

1. Kalahari
2. Thar
3. Atacama
4. Sahara
5. Arabia

B

- (a) North Africa
- (b) Asia
- (c) South Africa
- (d) India
- (e) South America

E

Answer the following questions :

Writing Skills

1. Write about the political life of Saudi Arabia.
2. Name the tropical deserts which are found in the world.
3. Describe the lifestyle of Bedouins.
4. What type of climate is found in the Tropical Deserts?
5. Describe the occupations of the people of Saudi Arabia.

- **Discuss with your class-fellows about the main occupations of Saudi Arabia.**
- **On the map of Saudi Arabia, locate the following :**

Creativity

1. Tropic of Cancer
2. Persian Gulf
3. Mecca and Medina
4. Riyadh, Jeddah, Dammam

LIFE SKILLS AND VALUES

Reserves of petroleum are limited. Use solar energy instead of petroleum and save it.

The Tropical Hot-Wet Forest

In this chapter, you will learn about location, climate and vegetation, important cities, wildlife, lifestyle of the people, occupations.

In this region, **Amazon Basin** of South America, **Congo Basin** of Africa and south-east part of Asia such as **Malaysia**, **Indonesia**, etc. are situated. These regions are located about 5°N and 5°S of the equator in the lowlands only, because the climatic condition of highlands of the equatorial region is entirely different from the lowlands.

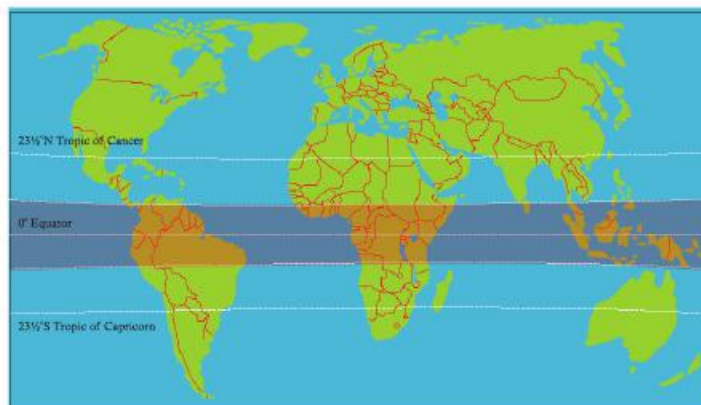

Congo in Africa

In this chapter, you will study about the geographical features of Democratic Republic of the Congo (earlier called Zaire).

Location

Look at the map of the world you will find the DRC, Amazon Basin of Africa. DRC is very suitable to study its unfavourable natural condition such as environmental effect on the people, vegetation, occupation, etc. Democratic Republic of the Congo is located on the both sides of the equator.

The Equatorial Region of the world

Hence, this region is called the **equatorial region**. Congo is also the name of its main river. Earlier the name of Congo river was **Zaire**.

Climate and Vegetation

The climatic condition of Democratic Republic of the Congo is hot and wet throughout the year. Its average temperature is 27°C. Its total rainfall is 200 cm annually. Here it rains daily in afternoons.

On the banks of the river Congo (Zaire), there are lush and thick green forests. Besides these, we find tall bamboo and cane, etc., various types of bushes, shrubs and grass. Mahogany, rubber, cinchona, oil-palm, etc. are main trees found here. These trees are so thick that it is difficult to make a path through these forests. These forests remain green all the year round. Therefore, these forests are called **Evergreen Forests**.

Wildlife

Various kinds of poisonous insects, birds, monkeys, gorillas, butterflies, chimpanzees, etc. are found in the forests of Democratic Republic of the Congo (DRC). Reptiles such as snakes, lizards, pythons wander here and there freely. They are very poisonous. Hence, the DRC is called the **natural zoo of the world**.

Insect

Python

Chimpanzee

Bird

Lifestyle of the People

According to the survey of United Nations 2007, the population of DRC was about 62.6 million. The Congo river basin is densely populated. Most of the people here are Christians. The people of Congo are quite tall and hefty. On account of hot and humid climate people generally do not wear many clothes, which explains their dark complexion. They have characteristic short and curly hair.

Most of the people live in small villages. They are divided into several tribes. Most of them belong to **Bantu** tribe. It is the largest racial group in Congo. They

Informative

A fly named **tsetse** is very poisonous found in Congo. It spreads sleeping sickness after biting the people.

live in small scattered villages along the banks of the rivers and lakes. People living in villages follow traditional ways of living, whereas the city people wear modern clothes and live in pucca houses.

Nowadays, in the cities, education is also spreading widely. New schools and colleges are being opened. Many students are going abroad for higher education.

Informative

Congo River is called the Highway of Central Africa.

Village people
of Congo

City People
of Congo

A Pygmy

A primitive tribe called **Pygmies** lives in the deeper forests of the Congo. They are also known as **Bambuti**. They are of short stature with height of about 1.5 metres. They are good hunters. They lead a nomadic life and continuously move about in search of food. They make small round huts using leaves, branches and trunks of trees. They do not grow crops. Their food consists of meat, nuts, roots, fruits, berries and honey. They are fond of music and dance.

Important Cities

Kinshasa is the capital city of the DRC. It has become independent recently like India. Kinshasa is located on the banks of river Congo. **Matadi**, **Kisangani**, **Lubumbasi**, and **Kananga** are other important cities. **Matadi** is the most important **seaport** of the Congo and **Kinshasa** is an important **riverport**.

Occupations

The people of Congo grow many crops such as rice, maize, cotton, coffee, rubber, bananas, groundnuts, etc. They have cleared the forests for the farming purpose. **Cassava** is the staple food of the people of Congo. It is the root of a plant.

Congo is rich in minerals. Gold, copper, diamonds, manganese, tin, uranium, etc. are found in Katanga state. These minerals are exported also. New factories are now being set up here. Textiles, cement, soap, paper, chemical industries are also found in cities.

Some occupations in Congo

Transport and Communication

Congo did not have proper means of transport and communication earlier. However, in recent years, railways and roadways have been developed significantly. Although, water transport is vital in Congo but the river Congo is navigable only due to the presence of waterfalls like **Stanley Falls** and the **Inga Falls**.

Just Rewind Up

- ▶ Congo is located on both sides of the Equator.
- ▶ Congo is also the name of its main river.
- ▶ Earlier the name of Congo river was Zaire.
- ▶ Congo experiences hot and wet weather throughout the year.
- ▶ Kinshasa is the capital city of DRC.
- ▶ Kassava is the staple food of the people of Congo.
- ▶ Congo is rich in minerals.

Work Station

A

Tick (✓) the correct answer :

Analytical Skills

1. Congo is called the natural zoo of the :
 (a) country ☐ (b) city ☐ (c) world ☐
2. Earlier the river Congo was known as :
 (a) Ganga ☐ (b) Congo ☐ (c) Zaire ☐
3. Katanga state is rich in :
 (a) pearls ☐ (b) minerals ☐ (c) liquid ☐

B**Fill in the blanks :**

Experiential Learning

1. The average temperature of Congo is _____.
2. Minerals are found in the state of _____.
3. People of _____ tribe are nomads.
4. _____ is an important river port of Congo.

- **Collect the pictures of Pygmies and Bantu tribes and find out more about their lifestyle. Compare their lifestyle with other tribes of Africa.** Creativity

**LIFE SKILLS AND VALUES**

Fresh air is good for health. We should go for a morning walk every day.

The Temperate Grasslands

A vast area covered with grass is called a grassland.

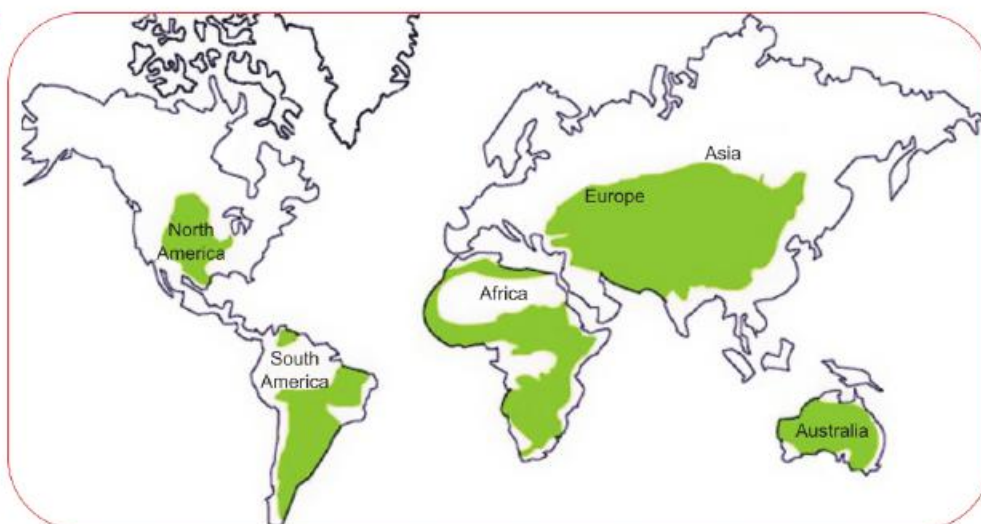

The temperate zone lies in the temperate regions which are neither too hot nor too cold. These regions are located away from the equator between $23\frac{1}{2}^{\circ}\text{N}$ and $66\frac{1}{2}^{\circ}\text{N}$ in the northern hemisphere and $23\frac{1}{2}^{\circ}\text{S}$ and $66\frac{1}{2}^{\circ}\text{S}$ in the southern hemisphere. These regions are known for their grasslands. A vast area covered with grass is called a **grassland**. The trees and mountains are hardly seen here.

The grasslands have different names of the different countries. The major grasslands of the world are as follows :

- ♦ **Prairies** in North America
- ♦ **Pampas** in South America
- ♦ **Downs** in Australia
- ♦ **Steppes** in Eurasia
- ♦ **Velds** in Africa

In this chapter, you will study about the main features of the temperate grassland of the **Prairies**.

A vast stretch of gently sloping grassland is situated in the interior of North America. It extends from Canada to Mexico. It is called the **Prairies**. 'Prairie' is a French word which means a grassland.

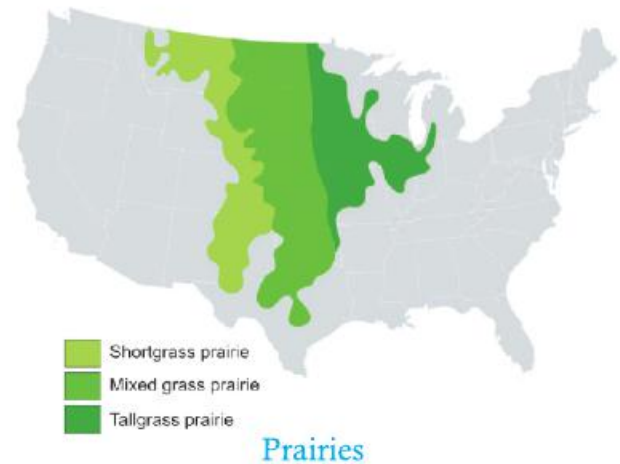

Major grasslands of the world

Location

The Prairies are located in the central part of the United States of America and parts of Canada.

This region consists of flat or hilly land covered by tall grasses. The farms here are very big. They are stretched over thousands of acres. The important places in the Prairies are **Chicago, Dallas, Texas, New Mexico, Illinois, Colorado, Oklahoma** and **Minneapolis** in the USA. In Canada, the three provinces **Alberta, Manitoba** and **Saskatchewan** are called the **Prairie Provinces**.

The **Mississippi** and the **Missouri** are the two rivers which flow through the Prairies.

Climate and Vegetation

In the Prairies, winters are cold and summers are hot. A moderate rainfall of about 50 to 70cm occurs, mostly in the summer season. The amount of rainfall varies greatly from year to year.

Trees are rare in the Prairies, except along the rivers. The climate is not suitable for growing trees. Grasses grow quickly during the spring season and change to hay in autumn. European settlers used the Prairies, first for grazing the cattle and then as a farmland.

Informative

Chicago is the largest meat-packing centre in the world.

Occupations

People of prairies are engaged in agriculture. They produce corn (maize) in the eastern part, wheat in the central part and cattle rearing in the western part. Other important crops grown are wheat, barley, rye, oats and nutritious grasses. Farmers produce enough wheat for the whole country and also for export. That is why, the Prairies are called the **Wheat Basket of the World**.

Life of the People

European settlers converted the grasslands into farmlands. An average farm here is spread over thousands of hectares. Farmers live with their families on the farms. Some workers also live on the farms. Homesteads are built for the farmers' families and the workers. Cattle and farm machinery have separate sheds.

Modern agricultural implements are used for ploughing, sowing, harvesting, threshing and winnowing in agriculture. The storing of food grains in the **silos** is also done through machines. Thus, many workers are able to cultivate thousands of hectares. Surplus production has made the farmers rich. They have all the modern facilities and comforts.

Animals are reared on large open areas called **ranches**. Cattle are reared mainly for meat. A large part of the total meat produced is consumed locally. The rest is exported to Europe. The open land towards the west is hilly. The soil is coarse and less fertile.

The farmers in prairies rear cattle for milk and other products. Most of the dairy farms are near the cities. Big dairy farms have modern facilities for processing milk. Even milking of cows is done through machines. Thus, in the Prairies machines have almost replaced manual **labour**.

Industries

The Prairies are rich in many minerals. Lignite, coal and mineral oil are mined in large quantities. Ore-crushing factories and oil refineries have been developed. The important industries in the Prairies are meat-packing and flour mills.

People living in the Prairies are continuously trying to improve their lifestyle using scientific discoveries and new technologies. However, climate still controls the various economic activities.

Informative

Beef is the staple food of the most Americans.

Just Rewind Up

- ▶ The temperate grasslands are found in the Temperate zones.
- ▶ The Prairies have extreme climate with hot summers and cold winters.
- ▶ Farming is done by machines in the prairies.
- ▶ Meat-packaging, ore-crushing, flour mills and oil extracting are the main industries here.
- ▶ People lead a comfortable life. Their standard of living is very high.

Work Station

A

Tick (✓) the correct answer :

Analytical Skills

1. Most of the grasslands of the world are found in the :
 (a) temperate zone ☐ (b) frigid zone ☐ (c) tropical zone ☐
2. The main rivers flowing in Prairies are :
 (a) Mississippi ☐ (b) Missouri ☐ (c) both of these ☐
3. Steppes are found in :
 (a) Asia ☐ (b) Eurasia ☐ (c) Africa ☐
4. Machines have replaced the :
 (a) manual labour ☐ (b) ranches ☐ (c) farmers ☐
5. The economic activities of the Prairies depend upon the :
 (a) government ☐ (b) farmers ☐ (c) manual labour ☐

B

Fill in the blanks :

Experiential Learning

1. The Mississippi and the _____ rivers provide water to the Prairies.
2. Ore- _____ and meat _____ are two important industries in Prairies.
3. Cattle are reared in large areas called _____.
4. The rainfall in Prairies _____ occurs in the summers.
5. _____ is the largest meat-packing centre in the world.

C

Match the following :

Critical Thinking

A

1. Velds
2. Downs
3. Chicago
4. Steppes
5. Prairies

Creativity

The Globe : Model of the Earth

In this chapter, you will learn about globe, parallels of latitude, lines of longitudes and longitudes and time zone.

Our earth is a unique planet because of the presence of life. Life exists on this planet because of the presence of air and water. The earth is the home of human beings, animals and plants.

In olden days, people believed that the earth was flat. They thought if they travelled too far to the edges, they would fall off this flat surface.

Some philosophers and explorers such as **Pythagoras**, **Aristotle**, **Magellan** and **Copernicus** changed the opinion of people about the earth. They said that the earth is round in shape. **Sir Issac Newton** suggested that the earth is not a perfect sphere but is somewhat flattened at its tops.

What is a Globe?

A globe is a man-made model of the earth. It is the simplest and the most accurate way to represent the earth. The map drawn on the surface of the globe shows the relative sizes and shapes of the continents and oceans. It also shows the correct location of different places and features in relation to one another.

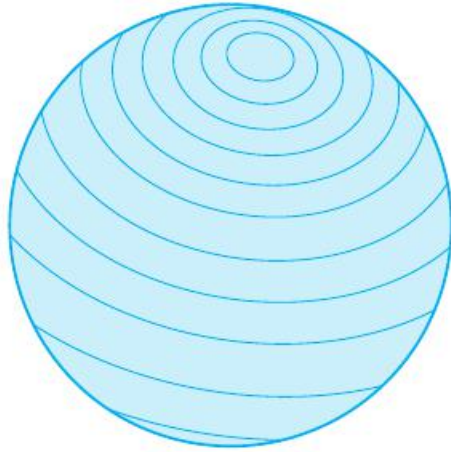

Children! You know that our seven continents such as **Asia**, **Africa**, **South America**, **North America**, **Europe**, **Australia**, **Antarctica** and four oceans such as **Pacific ocean**, **Atlantic ocean**, **Indian ocean** and **Arctic ocean** are shown in different colours on the globe and the map. The biggest landmasses surrounded by water bodies on all sides are called the continents. The globe has two points—

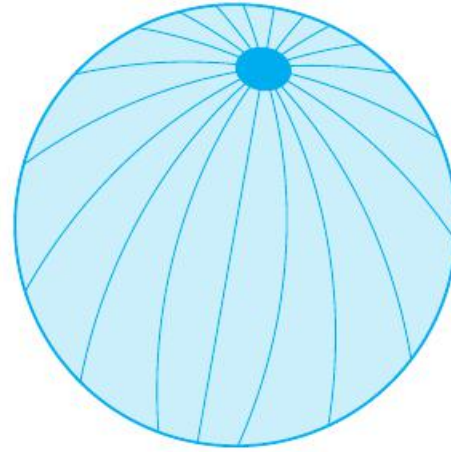

Northernmost point and Southernmost point. Northernmost point is called the **North Pole** and Southernmost point is called the **South Pole**. Both poles are flat in shape.

Parallels of Latitude

If you look at the globe, you will see many lines running parallel to the equator, i.e., they are full circles. They run from east to west.

Parallels of Latitude

Lines of Longitude

They are numbered from the equator. Equator is located at 0° . The poles are at 90° each. The North Pole is marked as 90°N and the South Pole as 90°S . They never meet one another as they are parallels. These lines are called the **lines of latitudes** or the **parallels of latitude**.

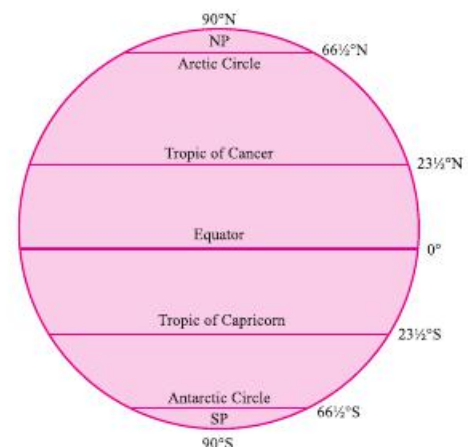

The earth has two end points : the **North Pole** and the **South Pole**. The Equator is the longest of the parallels and thus it is called the **Greatest Circle**. There are some other special parallels. These are marked and named as under :

1. $23\frac{1}{2}^\circ\text{N}$ - **Tropic of Cancer** lies in the Northern Hemisphere.
2. $23\frac{1}{2}^\circ\text{S}$ - **Tropic of Capricorn** lies in the Southern Hemisphere.
3. $66\frac{1}{2}^\circ\text{N}$ - **Arctic Circle** lies in the Northern Hemisphere.
4. $66\frac{1}{2}^\circ\text{S}$ - **Antarctic Circle** lies in the Southern Hemisphere.

Informative

- Equator is called the Greatest Circle.
- The Tropic of Cancer passes through the middle of India.
- The Parallel of Latitude running close to Delhi is 28°N .

Important parallels of latitudes.

The latitudes are 181 in number with equator. These important parallels help in dividing the earth into various heat zones.

Lines of Longitude

If you look at the globe, you will find semi-circles joining the North Pole to the South Pole. Longitudes are 360 in number and all are equal in length. These lines are also called **Meridians of Longitude**. In 1884, all the countries of the world decided that the meridian passing through the observatory at Greenwich near London in the United Kingdom (UK), would be taken as the starting line. It is marked as 0° . This is called the **Greenwich Line** or **Prime Meridian**.

Informative

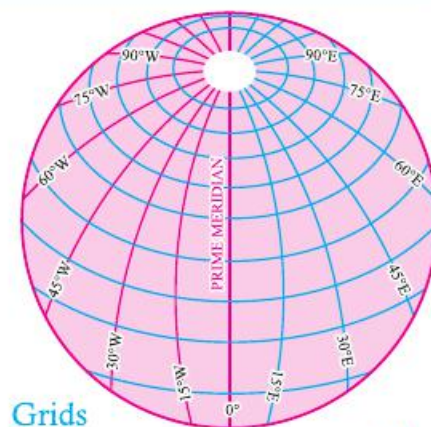

The Greek astronomer Ptolemy invented the system of Latitudes and Longitudes.

Locating a Place

If we want to locate a place on the globe, we must know both its latitudes and longitudes. Because the point at which these two lines cross each other, will be the location of that place. The intersection of lines makes a grid.

There are 180° longitudes to the east of the Prime Meridian and similarly, there are 180° longitudes to west of the Prime Meridian.

The meridians numbered as 0° and 180° join to form a full circle around the earth. They divide the earth into two equal parts, named as the **Eastern** and **Western Hemispheres**. The meridians which are to the east of Prime Meridian are marked as $^\circ\text{E}$ and those to the west as $^\circ\text{W}$. For example, India is located to the east of the Prime Meridian.

Informative

India is located to the east of the Prime Meridian.

The latitudes and longitudes cross each other and form a network. This is called **grid**. The grid helps us in locating places.

Longitudes and Time Zones

There is a relationship between longitude and time. As the earth rotates, every place has its sunrise, sunset and noon. When the sun is at its highest point in the sky, it is noon.

Informative

The 180° meridian was designated as the International Date Line at the International Meridian Conference, held in Washington D.C. in 1884.

Local Time

Local time can be reckoned by the shadow cast of the sun, which is the shortest at noon and the longest at sunrise and sunset.

When the Prime Meridian of Greenwich has the sun at the highest point in the sky, all the places along this meridian will have mid-day or noon. As the earth rotates from west to east, the places to the east of Greenwich will be ahead of Greenwich time and those to the west will be behind it.

Standard Time

The local time of the places which are on different meridians is bound to differ. This will create problems for the people. There are about 30 meridians of longitude passing through India. That means India has 30 local times.

Time zones of the world

To avoid this confusion, the local time of a central meridian is taken as the time for the whole country. This is called **Standard Time**.

Some countries like Russia have a great longitudinal extent and so they have adopted more than one standard time.

Indian Standard Time

In India, the longitude of $82\frac{1}{2}^{\circ}$ E passing through Allahabad is considered as standard meridian. When it is noon on this longitude, the time is taken as noon for the whole country. This is known as **Indian Standard Time (IST)**.

India is situated between the longitudes of 68°E and 97°E and the latitudes of 80°N and 37°N . India has central position on the globe.

Informative

A.M. stands for Ante-meridian, i.e., before noon and P.M. stands for Post-meridian, i.e., afternoon. These were derived from the Roman Language.

Just Rewind Up

- ▶ A globe is a man-made model of the earth.
- ▶ There are four oceans and seven continents on the earth.
- ▶ The equator divides the earth into two hemispheres : Northern Hemisphere and Southern Hemisphere.
- ▶ The equator is the longest circle or latitude around the earth.
- ▶ The lines running parallel to the equator are called latitudes or parallels.
- ▶ The lines running from the North Pole to the South Pole are called longitudes or meridians.
- ▶ The meridians and latitudes cross each other to form a grid.
- ▶ The two end points on the globe are called poles.

Work Station

A

Tick (✓) the correct answer :

Analytical Skills

1. In India, longitude of $82\frac{1}{2}^{\circ}\text{E}$ passes through :

(a) Delhi

(b) Meerut

(c) Allahabad

2. Parallel lines to the Greatest Circle are called :

(a) latitudes

(b) equator

(c) longitudes

3. Equator is located at :

(a) $23\frac{1}{2}^{\circ}\text{N}$

(b) $66\frac{1}{2}^{\circ}\text{S}$

(c) 0°

4. Landmasses on the earth are known as :
 (a) seas (b) continents (c) oceans
5. The Tropic of Cancer is located at :
 (a) $23\frac{1}{2}^{\circ}\text{S}$ (b) $23\frac{1}{2}^{\circ}\text{N}$ (c) $66\frac{1}{2}^{\circ}\text{N}$

B

Fill in the blanks :

Experiential Learning

1. The Prime Meridian passes through _____.
2. The _____ is located at 0° longitude.
3. The _____ is a model of the earth.
4. Meridians run from _____ to _____.
5. The Tropic of Cancer is located in the _____ Hemisphere.

C

Tick (✓) for the true and cross (×) for the false statements :

Critical Thinking

1. Length of all the parallels is equal.
2. The Equator divides the earth into two equal parts.
3. All parallels are circles.
4. The Equator passes through India.
5. Arctic Circle is located at $66\frac{1}{2}^{\circ}\text{E}$ longitude.

☐
☐
☐
☐
☐

D

Match the following :

Critical Thinking

A

B

- | | |
|---------------------|-------------------------------------|
| 1. Prime Meridian | (a) $23\frac{1}{2}^{\circ}\text{N}$ |
| 2. Tropic of Cancer | (b) Greenwich |

| 4. North Pole | (d) Equator |

E

Answer the following questions :

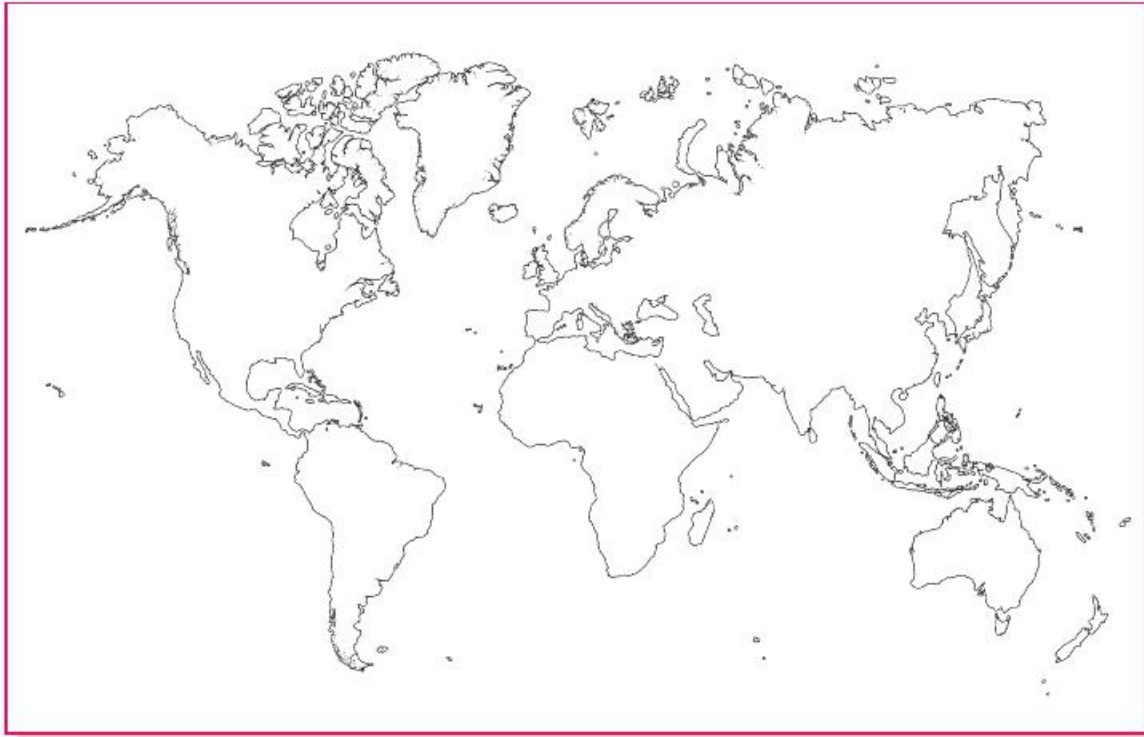

Writing Skills

1. How do parallels differ from meridians?
2. Where do the Tropic of Cancer and the Tropic of Capricorn lie?
3. How are you sure about the shape of the earth?
4. Describe the Indian Standard Time.
5. What are the longitudes?

- Draw a globe and mark the lines of latitude and longitude.
- Locate the time zones of the world on the outline map of the world.

Creativity

Factors that Affect the Climate

In this chapter, you will learn about weather and factors that affect the climate.

Children, you know that all the days in a year are not the same. Some days are cold, some are hot while some are rainy. You would have also seen it in a day that morning is cold, afternoon is hot, sometimes rainy and evening is again cold or rainy. There are many changes in a day of the air. These changes in the air for short time is called the **weather**.

Climate is the average condition of weather of a place or region throughout a season. In other words, the climate is a condition of temperature of atmosphere for a longer time.

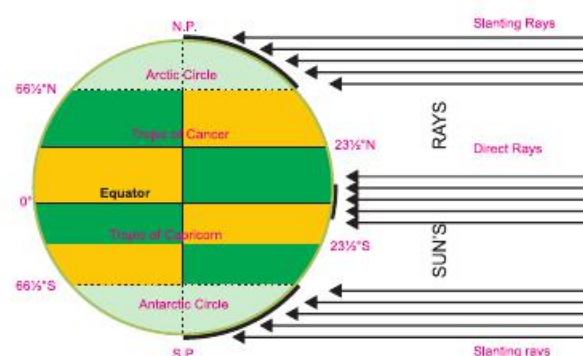

Climate is one of the most important elements of our natural environment. It influences the human life in several ways.

Factors that Affect the Climate

The following are the factors that affect the climate :

A. Distance from the Equator

You know that the rays of the sun fall directly on the equator. The place is hot where the sunrays fall directly and cold where they are slanting. Look at the position of the earth and the sun in the figure given aside.

India lies between 8°N and 37°N latitudes. The Tropic of Cancer passes through the middle of India. While the southern part lies in the tropical zone, the

northern part falls in the sub-tropical zone. As such the temperature remains quite high during summer season all over the country except in the areas of high altitudes. But during winter, temperature falls considerably in the northern plains and records below freezing point in many parts of the Himalayan belt. However, it is low to moderate in the rest of the country. Thus, India by and large, enjoys a hot tropical climate. It is just in front of the sun, the sunrays fall directly on it. So, this place and its surroundings are hot.

The more we move away from it towards the poles, the sunrays become more slanting and they spread over large areas. Hence, these are very cold all the year round.

For a long time, during the year, the poles get no sunlight. Therefore, the places near the poles are always covered with snow. Near South Pole, there is a frozen continent. It is called Antarctic. It is the coldest part of the world. Ice and snow is found everywhere and blizzards blow constantly. None wants to live in such a place. So we can say that the climate near the equator is hot.

According to the amount of heat received from the sun, the more we go towards the poles the colder it becomes.

Heat Zones

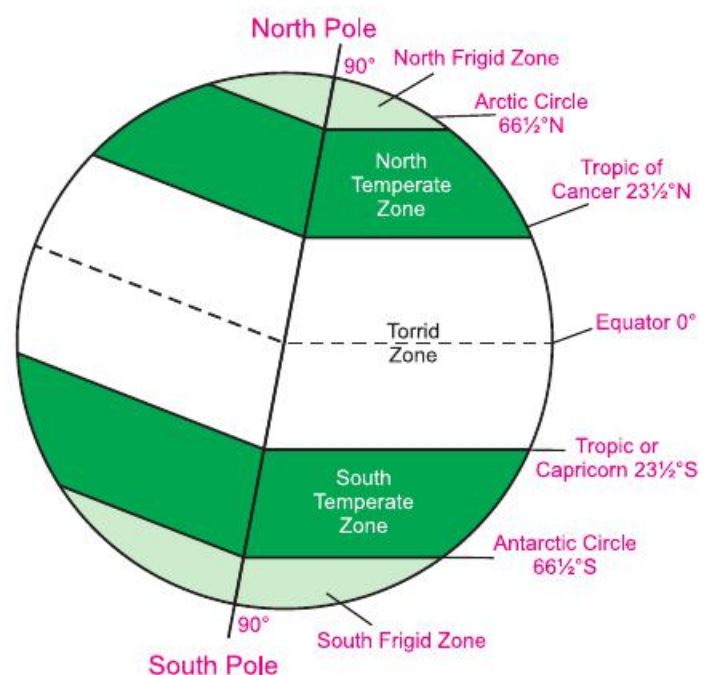

The earth is divided into the following heat or temperate zones— 1. Torrid zone, 2. Temperate zone and 3. Frigid zone.

1. Torrid zone

It lies between the Tropic of Cancer and the Tropic of Capricorn. It is also called **Tropical zone**. It is located between the $23\frac{1}{2}^{\circ}\text{N}$ latitude and $23\frac{1}{2}^{\circ}\text{S}$ latitude. This zone has the hottest climate.

2. Temperate zone

It lies in both the hemispheres. It lies in the northern hemisphere between Tropic of Cancer ($23\frac{1}{2}^{\circ}\text{N}$) and Arctic Circle ($66\frac{1}{2}^{\circ}\text{N}$), whereas in the southern hemisphere it lies between Tropic of Capricorn ($23\frac{1}{2}^{\circ}\text{S}$)

Heat Zones of the Earth

and Antarctic Circle ($66\frac{1}{2}^{\circ}\text{S}$). The climate in the temperate zones is neither too hot nor too cold. This zone is very favourable for the living beings.

3. Frigid zone

This zone also lies in both the northern and southern hemispheres. In northern hemisphere, it lies between Arctic Circle and North Pole (90°N) whereas in southern hemisphere, it lies between Antarctic Circle and South Pole (90°S). These zones have the critical cold climate. These zones remain covered with ice for almost the whole year.

B. Distance from the Sea

The climate of a place also depends on its distance from the sea. The peninsular character of southern India also has its climatic influence. With a long coastline, we have a large coastal area enjoying the equable influence of the sea. However, a large area in the northern part of the country lies too far away from the sea. Here the climate is continental.

If you compare the climate of Mumbai and Delhi, you will notice that Delhi is hotter in summer and cooler in winter as compared to Mumbai. Mumbai is neither very hot in summer, and nor very cold in winter. It is because Mumbai is near the sea while Delhi is far away from the sea.

Property of water is that it takes more time to absorb and to lose heat while land gets heated faster and also cools faster than water. During day time, the land near the sea absorbs more heat and therefore, becomes warmer than the nearby sea. The air over the land gets heated up and starts rising over the land. To fill the space created by this hot air, the cool air from the nearby sea moves towards the land and makes it cooler. The opposite happens during night time. Due to this continuous flow of land and sea breezes, the places near the sea have a more or less 'equable climate' while places far from the sea have 'extreme climate'.

C. Humidity

It is the main factor to affect the climate. When air has a large content of moisture or water vapour in it, it leads to humidity. Humid air also affects the climate of a place. It is one of the main reasons of rainfall. The amount of rainfall and the season influence the climate of that place. Places with cold climate experience snowfall instead of rainfall.

D. Direction of Winds

Winds also affect the climate of a place. The winds decrease the temperature of any place. Winds coming from the sea with water particles cause rains. This rain decreases the temperature. Some winds that move from dry lands do not provide rain. These hot winds increase the temperature of the place. For example, Delhi is hot in summer due to the dry and hot winds blowing from Rajasthan. While in summer, cold winds from the Himalayas cause a cold wave in northern India.

E. Altitude or Height above the Sea Level

You know that mostly in the summers, people go to hill areas to avoid the heat. Why?

The temperature decreases at higher and higher place. It decreases at the rate of 1°C for every 165 metres ascent. So the mountains are generally cooler than the plains. A higher altitude is responsible for lower temperature not only in the northern mountainous region but also in the peninsular plateau region. Hill stations of the peninsular region, such as Ooty, though quite close to the equator, have a rather cool climate. However, the temperatures in the Himalayan regions are still lower due to both a greater distance from the equator and a higher altitude. That is why, the hill stations are most numerous in the Himalayas. For example, **Darjeeling** (at a height of 6,982 feet above the sea level is cooler than Delhi.

A barometer is used to measure the atmospheric pressure of area. It can measure the pressure exerted by the atmosphere by using water, air or mercury.

A thermometer is used to measure the temperature. It is measured in degrees like **Celcius** (centigrade) and **Fahrenheit**.

The rainfall is measured with the help of **Rain Gauge**. It is also known as **Udometer** or a **Pluviometer**.

- ▶ The condition of air for a short time is called the weather.
- ▶ The average condition of weather of a place is called the climate.
- ▶ There are three heat zones : torrid zone, temperate zone and frigid zone.
- ▶ Altitude, winds, humidity, etc. affect the climate of a place.
- ▶ We can measure the climatic conditions with the help of the barometer, thermometer and rain guage.

Work Station

A

Tick (✓) the correct answer :

Analytical Skills

1. The rainfall is measured with the help of :
 (a) barometer ☐ (b) thermometer ☐ (c) rain- guage ☐
2. Temperature decreases 1°C at the height of :
 (a) 100 metres ☐ (b) 165 feet ☐ (c) 165 metres ☐
3. Delhi is warmer than :
 (a) Jaipur ☐ (b) Mumbai ☐ (c) desert areas ☐
4. With the help of thermometer, we measure the :
 (a) temperature ☐ (b) rainfall ☐ (c) wind ☐

B

Fill in the blanks :

Experiential Learning

1. The winds have _____ particles.
2. Ooty is a _____ station.
3. The Tropic of Cancer is considered at _____.
4. Temperate zone lies between Tropic of Cancer and _____.

The Maps

In this chapter, you will learn about what is map, kinds of map, language of map and sketch and a plan.

In the previous chapter, you have studied about the globe which is a model of the earth. Except the globe, map is also an essential component to study the earth and its structures. Now, you will study in this chapter about the maps, directions and the kinds of the map.

World Map

Map

A map is a flat symbolic representation of the earth or a part of the earth's surface and it is drawn to a scale. The origin of the term **MAP** is from the Latin word "Mappo", that means a napkin or cover-cloth.

Children! You know that a map is drawn on a flat or plain sheet of the paper. It is a representation of any area or whole earth's surface. You might also be knowing that it is very difficult to convert a round or spherical surface into a flat surface. Try to flatten a half-cut rubber ball into a flat surface. You will see that the rubber of the ball is torn on the edges. Similar is the case with the northern and southern portions of the earth when they are stretched out of proportion on a map. The map thus is not an accurate representation of the earth. Still the maps are very useful to us and we use them more often than the globes. The most important advantage of maps is that we can draw a part or the whole of the earth on a map. Many details can be shown on such a map.

• Types of Maps •

There are many types of maps. Some of them are as follows :

1. Political Maps, 2. Physical Maps and 3. Thematic Maps

1. Political Maps

Maps showing the boundaries of different continents, countries, states, cities, towns, etc. in any given area are called **political maps**.

2. Physical Maps

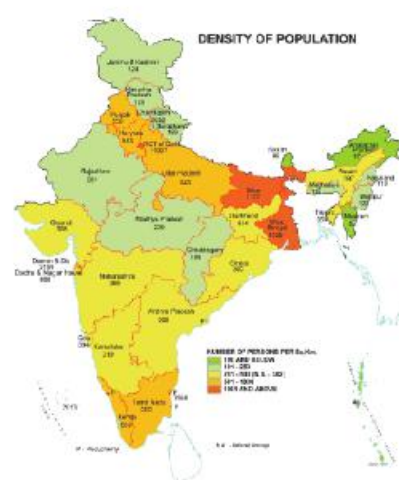

Those maps which show physical features such as mountains, rivers, plains etc. are called **physical maps**.

Physical Map

Political Map

Thematic Map

3. Thematic Maps

The maps which focus on specific information of the regions are called **thematic maps**.

(a) Some maps show rainfall in different areas. They are called **rainfall maps**.

(b) Some maps show population in different areas. They are called **population maps**.

(c) Some maps show crops grown in different parts of the given area. They are called **crops grown maps**.

Advantages of Map

Maps are very useful to us in the following ways :

1. With the help of a map, you can easily locate the political boundary of a country.

2. Through a map, you can easily show the courses of rivers, roads, railways, waterways and airways.

3. Distribution of rainfall, forests, minerals, crops, population, climate, industries, etc. are shown easily on maps.

4. You can easily locate cities, hills, mountains, plains, plateaus, valleys, etc. on a map.

5. You can carry a map very easily.

Informative

A person who makes a map is called a **cartographer**. The study of maps is called **cartography**.

Language of a Map

A number of signs, symbols, scale, title and colours are used to show different things on a map. This is called the language of map. To understand a map, we should know this language.

Key or Symbols :

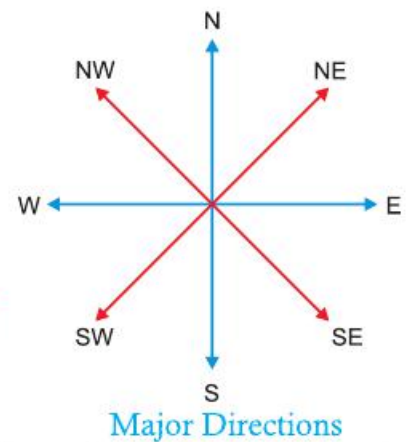

Key or symbols tell about the map. Some symbols used on a map are given below.

	Level Crossing		Well with relative depth
	River Bed		Tubewell
	District Boundary		Spring
	Railway Line with Station		Railway Line with bridge

Key or symbols

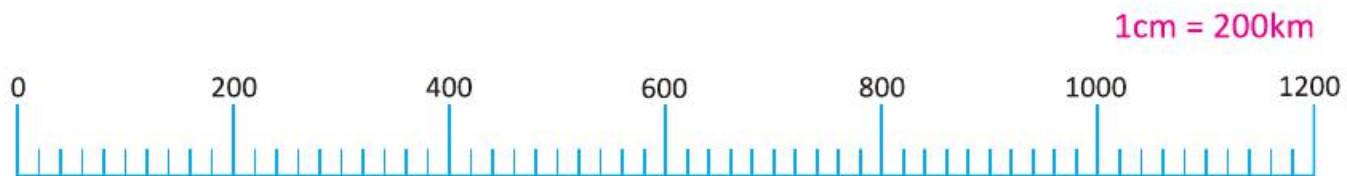

Direction

Children! You have learnt that the sun rises in the **east** and sets in the **west**. If you stand facing the sunrise, you will find **north** to your left hand, **south** to your right hand and **west** to your back side. Thus, there are four main directions. In similar manner, on the map the **upper side** is called north, **lower side** is south, **left side** is west and the **right side** is east direction.

As the Jammu and Kashmir is in the north, Tamil Nadu is in the south, Arunachal Pradesh is in the east and Gujarat lies in the west side of India.

Scale : “A scale is a ratio between a unit distance on the map and actual distance on the land”. A scale of 1:200 means that a distance 1cm on the map is 200 km on the ground.

After studying the four main directions, it becomes more necessary to know about the sub-directions. As the distance from north to east is **North-east**; north to west is **North-west**. So the south to east is **South-east** and south to west is **South-west**. Thus the sub-directions are also four.

Title : All maps have a title which tells the reader what the map is about.

Colours : In the maps, the colours play an important role. They tell a recognition to every part or things separately. Colour descriptions are given below.

Colours	Parts
Brown	Mountains
Dark Blue	Deep water, Oceans
Light Blue	Lesser depth of water
Green	Plains

Informative

A book of maps is called an **Atlas**.

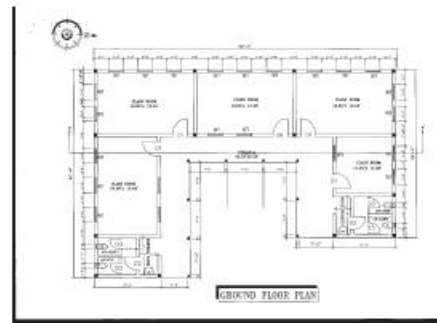

A Sketch and a Plan

A Sketch : Some maps are drawn hurriedly. They are not drawn according to scale. Such maps are called a **sketch**.

A Plan : Some maps are drawn at a very large scale in a planned way. These are called **plans**.

Sketch

A plan of a classroom

These maps are drawn when much details of a small area is to be shown on the map. If you want to show the number and position of benches in your classroom, you will have to draw a plan of the classroom itself. Such detail cannot be shown on the map of your town or the city.

Informative

The weather maps are prepared by the Meteorological Department of India by collecting data from various meteorological stations.

Just Rewind Up

- ▶ A map is a drawing of the whole or a part of the earth's surface on a flat surface.
- ▶ A map without a scale is called a sketch.
- ▶ A book of maps is called an atlas.
- ▶ Every map has a key that indicates what the colours and symbols used in the map stand for.

Work Station

A

Tick (✓) the correct answer :

Analytical Skills

1. Drawing of the earth on a flat surface is called :

(a) globe

☐ (b) map

☐ (c) symbol

2. A book that contains many maps is called :
 (a) atlas ☐ (b) diary ☐ (c) magazine ☐
3. The origin of the term 'Map' is from the Latin word :
 (a) Mappo ☐ (b) Tappo ☐ (c) Hippo ☐
4. Physical map shows the :
 (a) mountains ☐ (b) rivers ☐ (c) all of these ☐
5. Green colour shows the :
 (a) hills, mountains ☐ (b) plains ☐ (c) rivers, oceans ☐
6. Upper side of the map shows the :
 (a) south ☐ (b) north ☐ (c) south-west ☐

B

Fill in the blanks :

Experiential Learning

1. Dark-blue colour shows the _____.
2. The origin of the term _____ is from the Latin word _____.
3. The upper side of map indicates the _____ direction.
4. Brown colour shows the _____.
5. The map which shows the physical features is called _____ map.

C

Match the following :

Critical Thinking

A

1. Brown colour
2. Jammu and Kashmir
3. Physical map
4. Sketch
5. Atlas
6. East

B

- (a) Arunachal Pradesh
- (b) an imaginary map
- (c) a book of maps
- (d) north
- (e) continents, oceans, etc.
- (f) Mountains

D

Tick (✓) for the true and cross (×) for the false statements :

Critical Thinking

1. Lower part of map shows the east direction.
2. The colour scheme used in maps is universal.
3. Map is a model of the earth.

☐
☐
☐

4. There are six major directions.
5. A map without a scale is called a globe.

Writing Skills

E

Answer the following questions:

1. What are the four major directions?
2. What is called a sketch?
3. What colour is used to show a river?
4. Mention the role of colours in the maps.

- **Draw a sketch of your classroom.**

Art Integration

LIFE SKILLS AND VALUES

Make a plan of your house. Give a key with signs, symbols representing the places at your home.

The Birth of the United Nations

The large factories were set up and the things began to be manufactured in a large number.

As man entered the machine age, mass production started. The large factories were set up and the things began to be manufactured in a large number. This was called the **Industrial Revolution**. In the beginning, some European countries were only able to build machines and produce goods in large quantities. They purchased raw materials from the poor countries at very low rates and sold their finished goods at high rates to these poor countries. Thus, they earned huge profits.

They went to different parts of the world and made a few countries as their colonies. This enhanced competition and rivalry among the European nations.

This rivalry resulted in two world wars. Many countries were involved in these wars. The **First World War** was fought from **1914 to 1918** and the **Second** from **1939 to 1945**. The Second World War was the most expensive in terms of human life and property. Millions of people died and a large number of people were disabled. The United States of America dropped two atom bombs on **Hiroshima** and **Nagasaki** cities in **Japan**. The two big industrialised cities were reduced to ashes. The Second World War came as a shock to the

whole world. Millions of innocent people and soldiers lost their lives. The right thinking people thought that the huge wealth spent on wars should be used for bringing prosperity and happiness for the entire human race.

These wars made people worried all over the world about their future. After the first world war, the **League of Nations** was formed. It could not prevent or stop even small wars. The league could not function because it had two major flaws.

1. One of the world's most powerful nations, the USA was not its member.
2. The league members were not willing to oppose aggressions by Japan, Italy and Germany in 1930s.

As a result, this unopposed aggression led to World War II. The league failed but the idea of league once again took shape.

United Nations Headquarters
in New York

The leaders of different nations of the world were worried and concluded that if a Third World War took place, the entire human race would be finished.

This fear forced the countries of the world to establish another organisation which would prevent wars and promote peace and security in the world.

This feeling gave birth to the **United Nations**. The name was first suggested by **President Roosevelt of USA**. Finally representatives of **51 nations** met in San Francisco in April, 1945. India was one of them. This conference prepared the Charter of United Nations. Now its headquarter is in New York in USA. The UN flag has light blue background with its symbol which is a world map at the centre surrounded by olive branches. Olive branches symbolise peace.

President Roosevelt's
of USA

The UN was founded on 24th October 1945, after the World War II to replace the League of Nations, to stop wars among the countries, and to provide a platform for dialogue. Since then, this day is celebrated every year as the **United Nation Day** throughout the World.

It contains multiple subsidiary organisations to carry out its missions. There are currently **192 member nations**, including nearly every sovereign state in the world.

The Principles of UN are as follows :

1. All the member nations should respect the sovereignty and rights of each other.
2. Threats and the use of force should be avoided.
3. Only peaceful measures should be used to settle disagreements and disputes.
4. The member nations must support and cooperate with the UN in all its activities.

Informative

The Charter of UN was signed on 26th June 1945 and came into force on 24th October 1945.

The Aims of UN

- ◆ To maintain international peace and security by avoiding every kind of war-big or small war.
- ◆ To develop friendly relations and co-operation among the nations of the world.
- ◆ To promote respect for human rights and human freedom all over the world and protect them.
- ◆ To remove differences based on religion, race, language and sex among the people of the world.
- ◆ To solve economic, social, cultural and human problems peacefully in co-operation with every nation.
- ◆ To assist nations in these tasks and coordinate their efforts.
- ◆ To help the people of the world in removing illiteracy, diseases, poverty, etc.

Declaration of Human Rights

In order to achieve their aims and goals, the UN took a step forward. It made a declaration of human rights on 10th December, 1948. They are as follows :

- | | |
|----------------------------------|--|
| ◆ Right to live as free citizens | ◆ Equality before the law |
| ◆ Equal pay for equal work | ◆ Freedom of worship |
| ◆ Right to education | ◆ Freedom to marry according to one's wish |
| ◆ Freedom to travel anywhere | ◆ Right of free speech and writing according to one's choice |

The people of the world are still facing some of the problems, but United Nations is working sincerely to help the human race in its growth, maintenance of peace and development.

- ▶ The first world war started in 1914 and ended in 1918.
- ▶ The League of Nations was set up to prevent destructions of life and property.
- ▶ America dropped two atom bombs on Hiroshima and Nagasaki.
- ▶ The UN was formed on 24 October, 1945.
- ▶ At present, the United Nations has 192 member countries.

Work Station

A

Tick (✓) the correct answer :

Analytical Skills

3. The First World War was fought from :
 (a) 1914 to 1918 ☐ (b) 1920 to 1940 ☐ (c) 1919 to 1920 ☐
1. The UN was formed on 24th October, :
 (a) 1945 ☐ (b) 1993 ☐ (c) 1995 ☐
2. The World War II broke out in 1939 and ended in :
 (a) 1914 ☐ (b) 1918 ☐ (c) 1945 ☐

B

Fill in the blanks :

Experiential Learning

1. The UN has _____ member countries.
2. Nagasaki is a city of _____.
3. First World War was fought from _____ to _____.
4. UN was formed on _____.
5. The concept United Nations was introduced by _____.

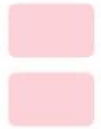

C

Tick (✓) for the true and cross (×) for the false statements :

Critical Thinking

1. Second World War was fought in 1920. ☐
2. First World War was fought from 1914 to 1918. ☐
3. The head offices of the UN are located in Paris. ☐

4. In the machine age, the mass production began.
5. The UN does not have its own flag.

Writing Skills

D

Answer the following questions :

1. Describe the flag of the United Nations?
2. Write the aims of UN.
3. Why did European countries turn to Asian and African countries?
4. How was the United Nations formed?
5. When was the First World War fought?

- **Discuss in your class about the loss in the world wars.**
- **Locate the following on the outline map of the world :**
(Japan, New York, Washington DC, Paris, Delhi)

Creativity

This monument was selected as a “**World Heritage site**” by UNESCO in 2007.

- Name the monument _____
- Country where it is located _____
- City where it is located _____
- Importance on 15th August related to it _____

- Find out the names of five other monuments in India that are World Heritage Site

Governing Ourselves

In this chapter, you will learn about parliament : lok sabha, rajya sabha, judiciary, state government, forming the government, the president.

India is a large country. It has the seventh place in the world in term of area. For the ruling purpose, India has been divided into 28 states and 8 union territories. All the states and union territories together make India an **Indian Union**. The government at the centre which looks after the welfare and defence of the whole country is called the **Central Government** or the **Union Government**. The government at the state level which looks after the welfare only of its own state is called the **State Government**. Every state in India has its own government. The union territories are governed by the Union Government of India.

The Constitution of India has provided powers and many rights to the state government. The Central Government also helps the state if the states face problems like floods, famine or any terrorist attacks.

Parliament

Central Government is headed by the President, the Prime Minister and his Council of Ministers. The Parliament is the law-making body of the country. It has two houses : the Lok Sabha and the Rajya Sabha.

Lok Sabha

The Lok Sabha is called the **lower house** of the Parliament. A Lok Sabha can have maximum of 552 members. These members are elected by the people who are 18 years of age or above. They are elected for five years. Any citizen of India, at the age of 25 or above can contest to become the member of Lok Sabha. Members of Lok Sabha are called **M.P.** (Member of Parliament).

Rajya Sabha

The Rajya Sabha is called the **upper house** of the Parliament. It has 250 members. Its members are elected by the members of Lok Sabha and the States Assemblies for a period of 6 years. 12 members are nominated by the President of India. The **Vice President** is the **Chairman** of the Rajya Sabha.

The one-third members of the Rajya Sabha retire every two years and then new members come in their place. Rajya Sabha is a permanent body of the Parliament.

Informative

The President of India and the Governor of any state must be of the minimum age of 35 years.

The President

MPs and MLAs together elect the President of India. He is the head of the country and the supreme commander of our defence forces. However, it is the Prime Minister who holds most of the powers as the head of the government.

Forming the Government

Our India is a democratic country. **Democracy** is the government of the people, for the people and by the people. The citizens of India contest or fight elections as **independent candidates** or by forming parties.

The leader of the party with majority of elected members in the Lok Sabha is nominated as the **Prime Minister** of India. He chooses a **Council of Ministers** to assist him from among his party members. The President swears them into their respective offices. The prime minister and his ministers are responsible to the parliament. Sometimes when single party does not get the majority, then many parties come together and form the government. This is called the **coalition government**.

Informative

In India, coalition governments have been formed from 1995 to 2014. May 25, 2014 single party, the BJP became able to form the government under the leadership of Narendra Modi.

State Government

Every state has a **Legislative Assembly** or **Vidhan Sabha**. The members of Legislative Assembly are elected by the people of the state for five years. These members are called the **MLAs**. When the Assembly election results are declared, the party that gets majority, forms the government. The **Governor** is the head of state like the President at the centre invites the leader of the majority party to form

the government. Now, the leader of the majority party becomes the **Chief Minister** of the state.

A Governor is the head of the state. He is appointed by the President of India for five years.

Judiciary

Judiciary helps in maintaining the law and order in the country. The Judiciary is an independent organ of the government. The highest judiciary body is the **Supreme Court**. It is located in **Delhi**. The **Chief Justice** of the Supreme Court is the highest justice of India. The President of India appoints the Chief Justice in consultation with the Prime Minister.

High Courts are the high judicial body at the state level and the office of the Chief Justice of a High Court is the highest office of a state.

Each state consists of many districts. Each district has the **District** and **Session Court** headed by a judge known as the **District** and **Session's Judge** respectively.

Informative

Among the Union territories, only Delhi has a High Court.

Just Rewind Up

- ▶ India has 28 states and 8 union territories.
- ▶ Central Government looks after the whole country.
- ▶ Every state has its own government.
- ▶ Union territories are governed by the central government.
- ▶ Members of Parliament are called MPs.
- ▶ Members of Assemblies are called MLAs.
- ▶ The Supreme Court of India is located at Delhi.

Work Station

A

Tick (✓) the correct answer :

Analytical Skills

1. Members of the Lok Sabha are called :

(a) MLAs

☐ (b) MPs

☐ (c) Presidents

2. Central Government looks after the whole :

(a) country

☐ (b) state

☐ (c) village

3. The highest judicial body at the state level is the :
(a) Supreme Court ☐ (b) High Court ☐ (c) District Court ☐
4. State Government looks after the whole :
(a) country ☐ (b) union territory ☐ (c) state ☐
5. The Supreme Court of India is located at :
(a) Delhi ☐ (b) Lucknow ☐ (c) Mumbai ☐

B

Fill in the blanks :

Experiential Learning

1. The Rajya Sabha is the _____ house of Parliament.
2. Each district has a _____ court.
3. India has _____ states and _____ union territories.
4. Union territories are governed by the _____ Government.
5. Central Government is headed by the _____ of India.

C

Answer the following questions :

Writing Skills

1. Who appoints the President of India?
2. Who appoints the Governor of a state?
3. What is the Parliament? Which are the two houses of Parliament?
4. Who can contest the elections of the Lok Sabha?
5. What is judiciary?

- **Make a list of the presidents of India.**
- **Make a list of the Prime ministers of India.**

Creativity

India, UN and World Peace

Our country was called the 'Golden Bird'. Learn in this chapter about India and UN and world peace.

India has been the peace-loving country since pre-historical age. It wants that all the countries of the world should live peacefully and cooperate one another in their economic and social discrimination. It does not like any type of prejudice among the people or among the communities.

Hence, our country was called the "Golden Bird". A number of scholars and saints were born here. They spread the message of peace, non-violence and truth, throughout the world. You will study in this chapter about the contribution of India to the peace of the world.

India and the UN

India has been a member of the UN since its inception. It signed the UN Charter in 1945. Although India was not an independent country at that time, still the British authorised India to join the UN.

Later, India was also elected as a member of the Security Council. It has participated actively in many of its programmes conducted by its agencies like the UNESCO, WHO, UNICEF, FAO, ICO.

Many Indians have occupied places of importance in the UN. Indian talents have been utilised by several agencies of the UN. **Vijaya Lakshmi Pandit** was elected the first woman president of the UN General Assembly in 1953.

Vijaya Lakshmi Pandit at
UN General Assembly

Indians have also been working very effectively in the various organs and agencies of the United Nations.

The Help of UN to India

The United Nations has also been helping India in many ways to carry out its welfare programmes. Many students and teachers are being given training through UNESCO. Many nurses and doctors are being trained by WHO. The FAO has helped our farmers to increase their agricultural production by using new techniques of farming. By many other ways, the UN is helping India.

NAM (Non-Aligned Movement)

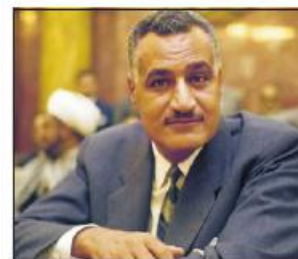

After the second World War, the world was divided into two political blocks– the **Capitalist and the socialist block**. Many Asian and African countries got their independence. At that time, the USA and the USSR emerged as the two super powers. Both of them wanted to spread their influence in as many countries as possible. The result was that either the Capitalist Block was headed by USA, or the Socialist Block was headed by USSR. It resulted in an atmosphere of cold war in the world. Some military packs were also made such as **NATO** (North Atlantic Treaty Organisation) and **WARSAW** Pact by Capitalist countries and Socialist countries respectively. But India remained neutral and did not join any of these blocks. It initiated a movement of those nations which neither wanted to join the Capitalist nor the Socialist block. This movement was called the Non-Aligned Movement (NAM). This movement was based on five principles known as “**Panchsheel**” enunciated by the then Prime Minister of India Pt Jawahar Lal Nehru at a conference at Bandung (Indonesia) in April 1955.

The principles of Non-Aligned Movement are :

1. Mutual non-aggression.
2. Mutual non-interference in each other's affairs.
3. Equality and mutual benefit.
4. Peaceful co-existence.
5. Mutual respect for each other's territorial integrity and sovereignty.

Pt. Jawahar Lal Nehru

Gamal Abdel Nasser

Marshall Tito

The Non-Aligned Movement was born in September, 1961, when the first non-aligned summit was held at Belgrade (Yugoslavia). **President Marshall Tito of Yugoslavia, Prime Minister Pt Jawahar Lal Nehru of India and President Nasser of Egypt** were the founders of this movement.

The first meeting of NAM was attended by only 25 members. Today it has 114 members and most of them are developing countries.

Just Rewind Up

- ▶ Smt. Vijaya Lakshmi Pandit was elected the president of General Assembly.
- ▶ Pt Nehru, Marshall Tito and Nasser were the founders of NAM.
- ▶ India has been elected the member of the Security Council.
- ▶ The meeting of NAM was attended by only 25 members.

Work Station

A

Tick (✓) the correct answer :

Analytical Skills

1. America has the :

(a) USA Block

☐

(b) USSR Block

☐

(c) MA Block

☐

2. India was called the :

(a) Golden temple

☐

(b) Golden Bird

☐

(c) Golden Fruit

☐

B

Fill in the blanks :

Experiential Learning

1. In the beginning, there were _____ members in NAM.

2. The UN was organised on October, _____.

3. Today NAM has _____ members.

4. _____ was elected as the president of UN.

5. Pt Nehru, Nasser and Tito were the founders of _____.

C

Tick (✓) for the true and cross (×) for the false statements :

Critical Thinking

1. America has the US block.

☐

2. India was called “Golden Bird”.

☐

3. There are 114 members in the Non-Aligned Movement.
4. India does not participate in the UN.

D

Match the following:

Critical Thinking

A

1. First NAM summit
2. Founding fathers of NAM
3. Two superpowers
4. Apartheid
5. First woman President of the UN

B

- (a) South Africa
- (b) Vijaya Lakshmi Pandit
- (c) Belgrade
- (d) Tito, Nehru and Nasser
- (e) The USA and the USSR

E

Answer the following questions:

Writing Skills

1. Write the principles of NAM.
2. How does India participate in the UN?
3. Who were the founders of NAM?
4. How is the UN helping India.

FUNNY TASKS

- **Make a list of countries who are the members of the NAM.**
- **Collect pictures of the main leaders of the NAM and paste them in your scrapbook.**

Creativity

Living Longer and Healthier

In this chapter, you will learn about medical instruments, basic health care and discovery of new medicines.

Everyone should be healthy, wealthy and happy. These three elements are the symbols of a rich life. Sadness is curse to one. In olden days, many people died at a young age due to lack of proper medical facilities. The infant mortality rate was high and spread of epidemics would claim thousands of lives in a matter of few days. The average life expectancy was very low. People used to think that diseases were caused by evil spirits. They used to worship gods and goddesses to cure their illness. But today, we are more aware and we know how diseases are caused and how they can be treated. We have become more conscious about our health. We know more about food and nutrition, health and fitness, treatment and cure.

Nowadays, medical science deals with the treatment of diseases. By observation and experimentation, man has invented many instruments and machines which help in fighting with diseases. We can now live longer and lead a healthier life.

Informative

Alexander Fleming of Britain discovered **Penicillin** in 1928.

Let us learn about man's progress in the field of medical science which has led to long and healthy life.

Doctor's Thermometer

Thermometer is used to measure the temperature of human body. There is mercury in it which goes high with the heat.

Thermometer

It has a scale, on it marked showing the **Fahrenheit** scale. Generally marked from 95° F to 110° F. 98.4° F is taken to be the normal temperature of the human body. If it is somewhat higher, it brings the possibility of fever. Thermometer was invented by **Gabriel Daniel Fahrenheit** in 1715.

Stethoscope

It is an instrument which magnifies the sounds of heart and lungs. Thus, it helps to find out the condition of a patient's heart and lungs.

The Stethoscope was invented by **Rene Laennec** in around 1819.

Stethoscope

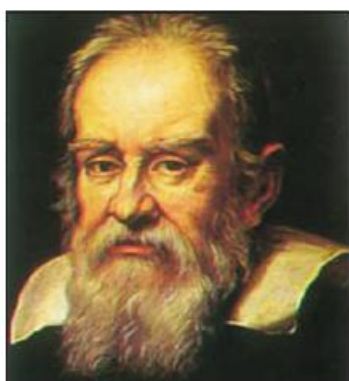

Dr Rene with his patient

It so happened that Dr Rene saw two children playing with a log of wood. One was whispering and the other was listening to the sound at the other end of the log. This gave him an idea. He rolled up a newspaper and tried to listen to the heartbeats of a patient. He was surprised to realise that he could hear the heartbeats clearly. He could also listen to the sound of air passed by the lungs more clearly. All these findings led to the invention of the stethoscope.

Microscope

It is an instrument that makes very small objects look large. The microscope was not invented by any one person. Once the owner of an optician shop in Holland happened to

Galileo

look at a fly through two lenses placed one behind the other. He was surprised to see how big the fly looked. He used this observation to invent the 'fleaglass' which could magnify things. The 'fleaglass' became very popular in Europe. **Galileo** learnt about this invention and improved on it. He used two lenses to make an early version of the microscope. Over the years, the microscope kept improving. It was an important invention for the fight against diseases.

Microscope

X-Ray Machine

The X-Ray has played a very major role in the field of medical science. This machine helps the doctors to find out the condition of almost every thing inside our bodies.

X-ray machine was invented by **W.K. Roentgen** of Germany in 1895. The discovery of X-Ray machine has brought a revolution in the world of medical science. This has made the proper treatment of many diseases possible.

Apart from these, the **CAT-Scan**, the **Ultrasound**, **Laser Beams** have greatly helped the doctors in their quest for a better life and man is continuing to progress by each passing day.

X-ray Machine

Discovery of New Medicines

A few centuries ago, due to the superstitions, many people consulted witch-doctors or magicians as they believed that diseases were due to the curse of Gods.

However, some of the more intelligent ones used various herbs to cure diseases. Day by day, new and better medicines were discovered. Except these instruments and machines, many other medicines were discovered by the scientists, such as, **Quinine**, **DDT**, **Dettol**, **Savlon**, **Antibiotic Medicines**, **Penicillin**, **Tetracycline**, etc. All the medicines are boon to the rich health of a man.

Quinine is very useful to cure **Malaria**, and **DDT** stops the breeding of mosquitoes. **Dr James Simpson of Britain** discovered **chloroform** in 1847. It became very useful anaesthetic in making a patient unconscious for the required time, as long as the surgery is being performed. It is the best pain killing medicine which helped a lot in relieving unbearable pains in any part of our body.

Alexander Fleming of Britain discovered **penicillin** in 1928. It is an antibiotic drug. It is useful in curing the various diseases caused by bacteria. **Streptomycin** is very important for the **tuberculosis** patients. **Joseph Lister**, a Scottish surgeon, discovered an antiseptic chemical which could be used to kill germs.

Louis Pasteur (1822-1895) of France found out that many diseases spread through several germs. These germs are present in air, water, milk, etc. He discovered that most of the germs got killed at a very high temperature. The technique involved heating the milk to 72°C for 15 minutes followed by rapid cooling to below 10° C. This technique is called **pasteurisation** after the name of Louis Pasteur.

Edward Jenner of Britain discovered the science of vaccination. He discovered an **anti-smallpox** vaccine in a very strange way. Dr Jenner's discovery encouraged scientists to develop several other vaccines to prevent many fatal diseases like cholera, polio, tetanus, yellow fever, diphtheria, typhoid, whooping cough, tuberculosis, etc.

Basic Health Care

We have learnt how medicines cure diseases. But what if we make preventive measures so as to keep off at least some of them. There are very simple measures which are cheap and effective :

- ◆ The first way is to keep ourselves and our surroundings clean.
- ◆ The second way is to eat good nutritious food which would help our body to fight with diseases.
- ◆ Regular exercise, to a great extent keeps the diseases away.
- ◆ Clean and safe drinking water is must.
- ◆ Proper drainage system and a good disposal system are most essential.
- ◆ Primary health services like hospitals and dispensaries should be set up.

Just Rewind Up

- ▶ Everybody wants to live a healthier and longer life.
- ▶ Thermometer is used to measure the temperature of human body.
- ▶ The stethoscope is an instrument which was discovered by chance.
- ▶ The growth of population must be controlled.

Work Station

A

Tick (✓) the correct answer :

Analytical Skills

1. Fleaglass was a :

(a) bird

(b) wild animal

(c) toy

2. Temperature of a healthy person should be :

(a) 36° F

(b) 110° F

(c) 98.4° F

3. Stethoscope was invented in :

(a) 1819

(b) 1857

(c) 1918

B

Fill in the blanks :

Experiential Learning

1. Galileo invented _____.

2. X-Ray machine was invented by _____.

3. Stethoscope was invented by _____.
4. We should drink _____ water.

C

Tick (✓) for the true and cross (×) for the false statements :

Critical Thinking

1. Shethoscope is used to observe everything inside our body.
2. Alexander Fleming discovered penicillin.
3. The normal temperature of a healthy person is 98.9° F.
4. We should keep ourselves and our surroundings clean.

☐
☐
☐
☐

D

Answer the following questions :

Writing Skills

1. What is an Antibiotic?
2. What is basic health care? Give two examples.
3. What does the X-Ray machine help us to do?
4. What do you know about Thermometer? For what purpose is it used?
5. Write names of some medicines.

- **Discuss with your class teacher about the HIV test.**
- **Make a chart about basic health care for your classroom.**

Communication

LIFE SKILLS AND VALUES

We should wash thermometer preferably with an antiseptic solution before using it.

The World of Growing Knowledge

In this chapter, you will learn about the world of growing knowledge.

We have read much more about the progress made by man. Progress means change.

Imagine a world without books. We should not have been able to learn about our ancestors or about our glorious past. As man observed and learnt new things, he grew more intelligent. He did not want to lose what he had learnt, but wanted it to go to his next generation. Earlier, it was all done orally. But man learnt so fast that he could neither grasp all of it nor pass it on. Hence, the need to record knowledge arose. This is the point when man's story about writing began.

The Story of Writing

Long before man started to write, he had begun to draw. The art of drawing and painting came much before the art of writing. Man drew pictures of animals which he came across. Such paintings are found even today drawn on the walls of caves. The earliest of writings by man were pictorial in nature. Such a 'Script' was simple to read but very difficult to write. To write them down required a lot of time. With experience and need, these pictures were simplified and became more symbolic. Thus, gradually pictures became symbols, which became signs for words and then for various sounds gradually gave birth to the alphabet.

The earliest writings were found in Egypt and Mesopotamia in West Asia. In Egypt, one can still find ancient tombs of the king which contain such 'pictorial scripts'. In Mesopotamia, the writings were done on an earthen tablet with a sharp-edged knife.

Apart from this, similar pictorial scripts were being thought of and evolved elsewhere as well. The scripts of China, Korea and Japan are all based on pictures and they are examples of pictorial scripts. These scripts are very difficult to read as a simple book.

In India, the oldest script was in use during the Indus Valley Civilisation. Such a script is found on the seals used in those days. However, we have not yet been able to decipher the script. Then came the 'Brahmi Script'. The Indian scripts we use today have largely been derived from the Brahmi Script.

Today, various scripts like the 'Devanagari' are based on sound. Apart from Devanagari, we also use Arabic and Persian scripts in our country.

The Story of Numbers

Like the script; numbers are also dated back from same olden times. Man, as a hunter not only wanted to identify the animals or their names but also their number. He had to draw the same number of animals he saw or hunt. It was a very tedious exercise.

In most languages, counting and numbering from one to ten was common. One may believe that to early man, fingers came in very handy to tell the number of his catch. This made him count very easily. This way of counting first evolved in India. Even the **concept of zero** was born in India. The use of zero for different purposes was a difficult task. From here, this concept of numbers travelled to the Arab world. They named these numbers '**Hindsa**' which meant 'India'. As the Arabs travelled to Europe and other parts of the world, they carried along with them this concept of '**Hindsa**'. Hence, the international numerals are based on the Indian system.

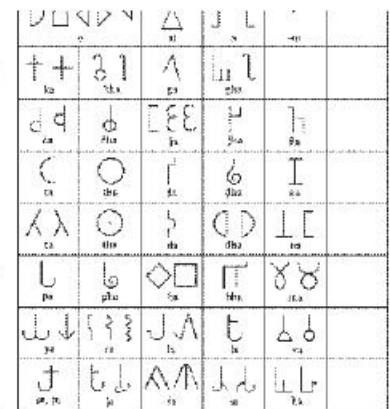

The Art of Printing

The first printing of any kind was done by the Chinese. At that time, books were written by hands, so they were scarce and hard to make. So few people could read or had books to learn.

It took nearly a thousand years before any real change was applied in the method used to reproduce the written words. **Johannes Gutenberg** a German

Devnagri and Urdu Scripts

Brahmi Script

printer, put the idea of using movable metal type. He printed his first book, the famous **Gutenberg Bible**, by this method.

Printing soon became the first means of mass communication. It put more knowledge in the hands of more people faster and more cheaply than ever before. As a result, reading and writing spread widely and rapidly.

Johannes Gutenberg and his Press

The Story of Paper

Man had created a writing material before he invented paper. The first ever materials used for writing were the skin of birch, the leaves of palm trees and the copper plates. But the first paper was developed in Egypt. In the Nile delta, **reeds** grow in plenty. In local language, the reed is called **papyrus**. The Egyptians took stems of papyrus plant, peeled them and flattened them. When dry, this made a sheet of papyrus and they could write on them.

But it was not paper. Paper was first developed in China. From there the art of paper making spread to Europe and England. Nowadays paper is one of the world's most important industrial products. Books, magazines and newspapers are printed on paper. Education, government and industry cannot operate without printing and paper.

Informative

Gutenberg invented the first printing press in Germany. The first book printed was the Bible.

Paper Industry

Braille Script

Long ago, there was a system of engraving letters on blocks of wood, so that blind people could make them out with their fingers. A person's finger tips are very sensitive. A blind person can read with his fingers. In 1829, a man called **Louis Braille** who was blind himself and

Informative

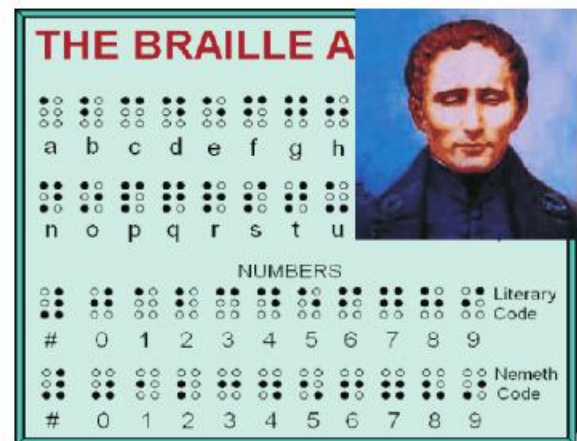

Egyptians made paper from a plant called **Papyrus**. The word '**paper**' is derived from papyrus.

was a teacher of the blind, developed a system that could be read by the blind and could also be written by them with a simple instrument.

The Braille system consists of raised dots. The Braille alphabet consists of different arrangements of the dots. It has helped many blind people to enjoy the pleasure of reading and writing. Another help for the blind is the 'Talking Book' which is a long playing record of a book and there are even special 'Talking Books' for blind children.

Literacy and Progress

Today's world is the world of competition. Man has progressed in numerous fields. He has gained great knowledge through literacy. In order to gain knowledge, it is essential to be literate. If a country has to progress its people, have to be literate and knowledgeable. Advanced countries have a cent percent rate of literacy. This means that everyone living, is educated and literate. In India a majority of the people are illiterate. Literacy shows the progress and development of country.

Government of India has started many literacy programmes. Some of them are :

- ♦ **Adult education** for illiterate people.
- ♦ **Sarva Shiksha Abhiyan** was launched in 2001.
- ♦ **District Primary Education** programme was launched in 1994.
- ♦ **Mid-day meals Programme** was launched 1995.

Just Rewind Up

- ▶ The earliest writings used by different people were mainly pictorial.
- ▶ The Indian scripts of today have been largely derived from the Brahmi Script.
- ▶ The concept of zero was born in India. The international numerals are based on the Indian system.
- ▶ In the olden days, books were written and compiled by hand.
- ▶ The Egyptians were the first to make paper like material from papyrus.
- ▶ Louis Braille developed a script for the blind.

Work Station

A

Tick (✓) the correct answer :

Analytical Skills

1. Who were the first to use papyrus?
 (a) Indians ☐ (b) Egyptians ☐ (c) Chinese ☐
2. The concept of Zero was born in :
 (a) China ☐ (b) India ☐ (c) Japan ☐
3. The earliest writings were found in :
 (a) Egypt ☐ (b) Mesopotamia ☐ (c) both are correct ☐
4. Who invented the printing press?
 (a) B. Pascal ☐ (b) Marconi ☐ (c) Gutenberg ☐
5. Braille script was developed for the :
 (a) deaf ☐ (b) blind ☐ (c) dumb ☐

B

Fill in the blanks :

Experiential Learning

1. _____ invented a script for blind in 1829.
2. 'Zero' was invented in _____.
3. _____ script was used in Egypt.
4. The printing press was invented in _____.
5. _____ was the first book to be printed using movable metal type.

C

Tick (✓) for the true and cross (×) for the false statements :

Critical Thinking

1. The Brahmi script is pictorial in nature. ☐
2. The script for the blind is called 'Braille'. ☐
3. The word 'paper' comes from the word 'papyrus'. ☐
4. The art of writing came much before drawing and painting. ☐
5. Printing was first developed in China. ☐
6. The use of zero for different purposes was a difficult task. ☐

D**Answer the following questions :**

1. Which country introduced the zero system?
2. Where was paper first developed in the world?
3. Who first developed the art of printing?
4. Who invented the first printing press?
5. What is a Braille script? Who invented it?
6. How did the spread of knowledge help people?

- Find out the names of 22 languages recognised by our Constitution.
- Visit a printing press and learn about making of books.
- Learn how the digits 1 to 10 are written in your mother tongue. Write them both in numerals and words.

Creativity

**LIFE SKILLS AND VALUES**

A number of people are still illiterate in our country. It is our duty to follow the programme— 'Each one teach one'.

The Social Awakening

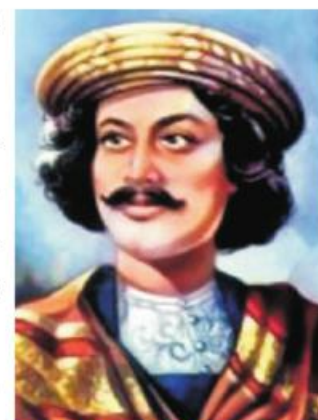

There are many social workers of our country in our history. Read and learn in this chapter about them.

Main features of the Indian Renaissance are :

- ◆ Renaissance aroused nationalism.
- ◆ It highlighted the need for ancient Indian ideals and love for the motherland.
- ◆ People began to oppose superstitious and superfluous rituals.
- ◆ The nation began to be considered as a part of world community.
- ◆ The western education infused in people the ideas of liberty, equality and fraternity. Many educated young people visited England where they got working knowledge for democratic institutions.

Brahmo Samaj

Raja Ram Mohan Roy was a great social reformer of the 19th century. He worked for the abolition of the sati-system, child marriage and other many social evils. All these social evils had made the condition of women miserable. He founded the 'Brahmo Samaj' in 1830 to remove these social evils and worked for the general welfare of all sections of the society. He was influenced by the broad outlook of the European culture. The members of the Brahmo Samaj also opposed idol worship and preached the belief in one God. Raja Ram Mohan Roy was a great scholar of Arabic, Persian and Sanskrit. The greatest achievement of Raja Ram Mohan Roy was the abolition of Sati System in 1829.

Raja Ram Mohan Roy

Movement for Widow Re-marriage

Ishwar Chandra Vidyasagar openly supported widow remarriage and proved that it was not prohibited by the Shastras. He strongly opposed the orthodox Hindus. However, Governor General Lord Dalhousie appreciated his efforts and the **Widow Remarriage Act** was passed in 1856. First of all, Vidyasagar married a widow in Calcutta (Kolkata) in 1856.

Arya Samaj

Swami Dayanand Saraswati was born in an orthodox Brahmin family of Tankara in Gujarat in 1824. He did not believe in idol worship. He established Arya Samaj in 1875 at Bombay (Mumbai). He established a number of Gurukuls based on the Vedic ideals. The most important of these institutions was set up at Kangri village at Haridwar in Uttarakhand.

Swami Dayanand
Saraswati

Rama Krishna Mission

The Rama Krishna Mission was established by Swami Vivekanand. He was the pupil of Shri Rama Krishna Paramahans. He had a dynamic personality, deep knowledge of Hinduism and a rare vision. He attended the **World Parliament of Religions at Chicago** in 1893, where he was heard with great favour. Vivekanand was the first Indian who re-established the spiritual pre-eminence of the Vedanta Philosophy on a global scale. He aroused nationalism among the Indian people and opposed all the social evils.

Swami Vivekanand

The Theosophical Society

The Theosophical Society led by **Annie Besant** in India was inspired by the philosophy of western enlightenment. But it found in the Upanishads a storehouse of wisdom for the realisation of the absolute. Based on this discovery, the Theosophical Society of India was founded at Adyar in Madras (Chennai) in 1886 which carried out extensive research on the Hindu religious systems. This society published many books and founded the **Central Hindu College** at Varanasi in 1858. Society strongly opposed child marriage and supported the abolition of caste system.

Aligarh Movement

The Muslim society was against European culture and education. Their

religious leaders were against the education of women. Due to lack of education, the Muslim society was very backward. He opposed the polygamy system.

Sir Syed Ahmed Khan took the support of Britishers to improve the condition of Muslims. He set up schools for spreading education of English. He also gave emphasis to the education of science. In 1875, he set up **Muhammadan Anglo-Oriental College** at Aligarh which later became famous as the **Aligarh Muslim University**. With the efforts of Sir Syed Ahmed Khan, Muslim women could also get higher education and it brought a new awakening in the Muslim society. Some other notable Muslim reformers were **Syed Ahmed**, **Shariatullah** and **Nawab Abdul Latif**.

Sir Syed Ahmed

All these social reformers helped in improving the status of women and spreading education. They developed the feeling of patriotism and nationalism among the people of India. It helped a lot in giving new life to the Indian national movement.

Just Rewind Up

- ▶ Ishwar Chandra Vidyasagar married with a widow.
- ▶ Raja Ram Mohan Roy established Brahmo Samaj in 1830.
- ▶ Swami Vivekanand established Rama Krishna Mission.
- ▶ The Theosophical Society of India was established in 1886 at Adyar in Madras (Chennai).
- ▶ Muhammadan Anglo-Oriental College was established in 1875 by Sir Syed Ahmed Khan at Aligarh.

Work Station

A

Tick (✓) the correct answer :

Analytical Skills

1. Raja Ram Mohan Roy established Brahmo Samaj in :
 (a) 1880 ☐ (c) 1850 ☐ (c) 1830 ☐
2. Ishwar Chandra Vidyasagar married with a :
 (a) widow ☐ (b) maiden ☐ (c) girl ☐

3. Rama Krishna Mission was established by :
(a) Annie Besant (b) Vivekanand (c) Dayanand

B

Fill in the blanks :

Experiential Learning

1. Dayanand Saraswati was born in _____.
2. Widow Remarriage Act was passed in _____.
3. Sir Syed Ahmed Khan started _____ Movement.
4. Raja Ram Mohan Roy founded _____.
5. The Theosophical Society was led by _____.

C

Tick (✓) for the true and cross (×) for the false statements :

Critical Thinking

1. Vidyasagar established Arya Samaj. ☐
2. Annie Besant founded the Brahmo Samaj. ☐
3. Central Hindu College was established at Varanasi in 1898. ☐
4. Sir Syed Ahmed started Aligarh Movement. ☐
5. Vivekanand participated in World Parliament of Religions at Chicago. ☐

D

Answer the following questions :

Writing Skills

1. Who established Arya Samaj?
2. Who was Raja Ram Mohan Roy?
3. What were the main social evils prevalent in Indian society during British rule?
4. Who was Sir Syed Ahmed Khan?

- Write the names of any five famous social reformers.
- Make a chart of a social reformer you like the most.

Creativity

Some People Never Die

Some people never die, they always live in our history. Such people pass away but even then they remain alive in the hearts of people.

Some people are born only for the well beings of the others. They never think for themselves. They sacrifice their all comforts and luxuries for other persons or for their nation. They do not wish anything in return. They know only to give not to take in return. Such people pass away but even then they remain alive in the hearts of people. They never die after death. They are memorised by the people forever. Some people who had died for others are given below.

Abraham Lincoln (1809-1865)

Abraham Lincoln was born in a poor farmer's family of America in 1809. He could not get formal education due to poverty. But he was educated by his mother at home. He became a lawyer when he grew up. He was an honest man and soon became popular as **Honest Abe**.

Abraham Lincoln

He was elected as the President of USA in 1860. He fought against slavery which was very common in those days. Especially in the Southern states of America people bought men, women and children, who were brought from Africa to work on their fields. They were treated brutally. People in Northern states were against slavery. Difference of opinions resulted in a civil war between Northern states and Southern states. Lincoln won the civil war and maintained the unity of the states. Slavery was abolished and made illegal. Abraham Lincoln was elected President of the United States of America for the second time.

Some people were against his policies. One night in 1865, while watching a play, in a theatre with his family, Lincoln was shot dead. His death was mourned all over the world. Lincoln has become immortal.

Mahatma Gandhi (1869-1948)

Gandhiji was born on 2nd October in 1869 at Porbander in Gujarat. His full name was Mohandas Karamchand Gandhi. We celebrate his birthday as **Gandhi Jayanti** every year.

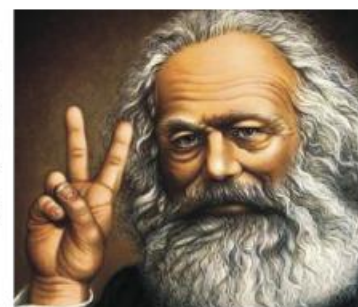

Gandhiji got primary education in Porbander and went to England for higher education. He studied law in England and became barrister. He started practice in Mumbai High Court. After some time, he went to South Africa for a case. In South Africa, he saw the discrimination against dark skinned people by the whites. He started fighting a peaceful battle against this inequality. He believed that all human beings were equal and had a right to live with dignity. He asked people to fight peacefully against the British rule. He preached **non-violence** and **non-cooperation**. He returned to India in 1915. He was shocked to see the condition of Indians under the British rule. He called for **Quit India Movement**. It was again a war without violence. Use of British products were banned, non-violent marches and ways were adopted and non-cooperation made it difficult for the British to rule. In the end, British had to accept moral defeat and give independence to India on 15th August, 1947.

Some of Mahatma Gandhiji's views were not acceptable to a section of people. They thought he was favouring the Muslims and was responsible for the creation of Pakistan. He was assassinated by one such person **Nathuram Godse** on 30th January 1948.

Mahatma Gandhi had served his country and mankind all his life. He is remembered all over the world as one of the greatest leader of modern times. He was called **Mahatma**. We remember him as **Bapu**, the **Father of the Nation**.

Karl Marx (1818-1883)

You have read about the Industrial Revolution and mass production. The factory owners grew richer but the workers were paid meagre wages. Thus, society was divided into two classes— the capitalists or rich people and the labourers or the workers.

The capitalists were concerned only with their own profits. They did not take care of their workers. The workers led a miserable life. It

was during this period that Karl Marx came forward in support of the workers. Karl Marx was born in Germany in 1818 in a very rich family. He and his friend **Friedrich Engels** advised the workers to unite and fight against the capitalists.

Karl Marx came up with the idea that the workers should have a share in the ownership and profits of the factories. He along with Friedrich Engels published his ideas in a famous book, the **Communist Manifesto**. Karl Marx also wrote a book called **Das Capital**. In these books, he advocated the ideas of equality. The rich people of Germany, France and Belgium were upset with his ideas. Karl Marx left Germany and went to England. Here he kept on spreading his ideas through his writings till his death in 1883.

Vladimir Lenin

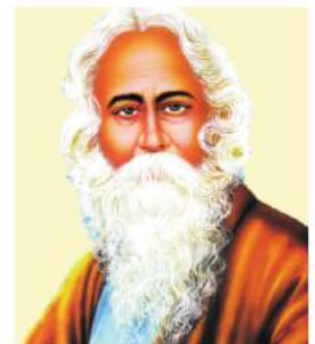

Vladimir Lenin followed the ideas of Karl Marx and he led a communist revolution in Russia. In those days, Russia was ruled by the czars. Czars were very cruel. They ill-treated the people. People of Russia were very much against the czars. Consequently in 1917, a revolution broke out in Russia. The czar was assassinated and a Communist Government was formed in Russia under the leadership of Lenin. Communism soon spread to many other countries of the world.

Rabindranath Tagore

Rabindranath Tagore was a great poet, writer, musician and philosopher. He was born in 1861 in Calcutta (Kolkata). His parents were Debendranath Tagore and Sarada Devi. Young Tagore was popularly called 'Rabi'.

Music was an important part of the Tagore family. Rabi too liked poetry and music. He wrote his first poem **Banphool** when he was just 15 years old. It was later published in a magazine.

Rabindranath had a keen interest in the folk music of Bengal. He used it in many of his songs. **Jana-Gana-Mana**, our National Anthem was composed by Rabindranath Tagore.

Rabindra Sangeet, the music of Tagore is very popular even today. It is sung and enjoyed by people all over the world.

Tagore wrote nearly 50 books and more than 3,000 poems. He was awarded the **Nobel Prize** for literature in 1913 for his book, **Gitanjali**. He was also honoured by the English Government. However, he returned this honour in protest against the Jallianwala Bagh Massacre.

Rabindranath believed that education was the only means through which India could progress. He founded a school at **Shanti Niketan** in West Bengal in 1901. It is now known as the **Vishva Bharati University**. Tagore devoted a great deal of his time to this school. He lived there till he passed away in 1941.

Just Rewind Up

- ▶ Many people live for others. They sacrifice their lives for the well-beings of others.
- ▶ Abraham Lincoln fought against slavery and abolished it.
- ▶ Karl Marx wanted equal participation and share for workers in the factories.
- ▶ Mahatma Gandhi is called the 'Father of the Nation'.
- ▶ Rabindranath Tagore wrote the Gitanjali.
- ▶ Vladimir Lenin followed the ideas of Karl Marx.

Work Station

A

Tick (✓) the correct answer :

Analytical Skills

1. The 'Gitanjali' was written by :
(a) Karl Marx ☐ (b) R.N. Tagore ☐ (c) Vladimir Lenin ☐
2. "Das Capital" was written by :
(a) Lincoln ☐ (b) Gandhiji ☐ (c) Karl Marx ☐
3. Abraham Lincoln abolished the :
(a) richness ☐ (b) slavery ☐ (c) poverty ☐
4. We celebrate Gandhiji's birthday as :
(a) national festival ☐ (b) religious festival ☐ (c) harvest festival ☐

B

Fill in the blanks :

Experiential Learning

1. The _____ were concerned only with their own profits.
2. Abraham Lincoln was born in _____.
3. Vladimir followed the ideas of _____.

4. Karl Marx was born in Germany in _____.
5. Gandhiji was assassinated by _____.

C

Tick (✓) for the true and cross (×) for the false statements :

Creativity

The Revolt of 1857

India was very prosperous in the ancient time. The first revolt for freedom took place on 10th May, 1857.

In ancient times, India was known as **Golden Bird** for its riches and prosperity. It was famous for its spices, pearls, silk, gold and handicrafts. These things were in great demand especially in the European countries.

Seeing the prosperity of India, many traders from all over the world came to India. The **Aryans** came from Central Asia and settled down permanently in India. Chengis Khan, the Mongolian invaded and looted India many times. **Alexander** the great too, came to conquer India but went back after a battle with Porus. **Hiu-en-Tsang** from China came in pursuit of knowledge and to visit the ancient Indian universities of Nalanda and Takshashila. Columbus wanted to come to India, but instead landed on the coasts of America.

India was famous all over the world for her wealth and quality of goods. India had trade relations with Greece, Rome and the Arab Empire from the olden times. Later **Spain** and **Portugal** also tried to enter that trade.

The ocean route from Europe to the east via the Cape of Good Hope to India was discovered by Vasco-da-Gama in 1498. He was a Portuguese sailor. He landed in **Calicut** (now Kozhikode) on the west coast of Kerala. He established trade in spices for which **Kerala** is famous.

The **Portuguese** bought spices from India and sold in Europe. He also sold European goods in India

Vasco-Da-Gama

and earned a lot of wealth. Thus, the Portuguese collected great wealth from India through this trade. They became rich in no time.

With the Industrial revolution, the **Dutch**, **British** and **French** also tried to gain a foothold in this profitable business. The French established their colonies in India.

In the last, the Britishers came to India for trade. They established their colonies in India. They defeated Dutches, Portuguese, etc., and ruled over India for nearly 200 years. They gained supremacy in India.

The **East India Company**, a British company opened the first trading centre at **Surat**. Later the Mughal emperor **Jahangir** gave permission for the opening of more trading centres in India.

After getting permission of Emperor, the British soon opened factories at **Bombay** (Mumbai), **Madras** (Chennai), **Calcutta** (Kolkata). With the excuse that they had to protect their British factories, they started maintaining an army.

The Battle of Plassey

Siraj-ud-Daulah, the Nawab of Bengal objected to the building of forts and keeping their own armies by the British. He demanded their removal, but the British refused. The Nawab declared war against them.

In June 1757, a big battle was fought at Plassey between the Nawab and the British. In this battle, the Nawab was defeated and the British became very powerful in Bengal. They trained Indian soldiers and employed them in their own army.

Injustice of the British

The British tortured Indians in the following ways :

- ◆ The British exploited all the resources of India. They ruled India to get maximum benefits from these resources.
- ◆ They forced the farmers of Bihar to grow Indigo and forced them to sell it only to the British traders at very low prices.
- ◆ They forced Indian weavers to sell their fine cotton and silk produce only to the British traders at very low prices.

- ♦ The British used Indian soldiers to conquer India but they treated them badly.

Later on in 1764, **Battle of Buxar** was fought. In this battle, the British won. After this battle, they started extending their territories by forcing Indian rulers to surrender their kingdoms through various policies. They started **Doctrine of Lapse** policy, and they captured **Jhansi**, **Nagpur** and many other places.

By 1857, the British were the masters of almost the whole country. All sections of the Indians were unhappy with the British rule. The Indian rulers who had lost their kingdoms were ready to fight against the British. Thus traders, farmers, soldiers, kings, etc. were dissatisfied with the British rule. They wanted the British to leave India.

Revolt Against the British

When the circumstances became unbearable, it was 10th May, 1857 that a major revolt broke out. This was called the **First War of Independence**. It was also called the **Sepoy Mutiny** by the British Officials. It was an important event in our struggle for freedom.

The revolt was started by the Indian soldiers in the English Army in India. A new rifle, called the Enfield, had been introduced in India. The rumour spread that fat of cows and pigs had been used in making the bullets of the rifle. Soldiers had to bite off the bullet with their mouth before loading it in the rifle. This was against the religious sentiments of both the Hindu and the Muslim soldiers. Indian soldiers refused to use these rifles and revolted.

The revolt started at Meerut and soon spread to large parts of northern and central India. It was joined by farmers, craftsman and other sections of society.

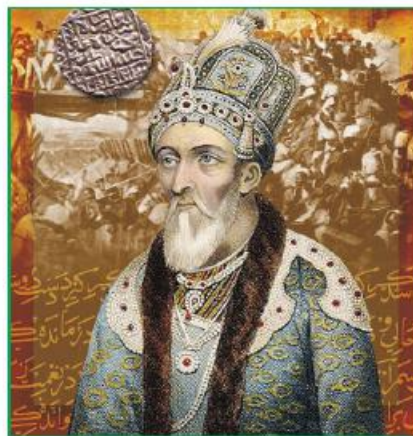

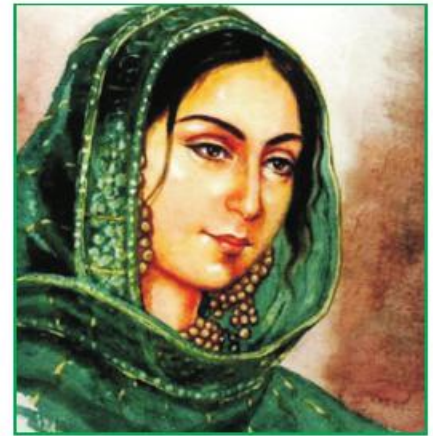

The soldiers declared the last Mughal Emperor **Bahadur Shah Zafar** as their leader. The revolt was led by **Nana Sahib** and **Tantia Tope** at Kanpur, **Rani Lakshmibai** at Jhansi and **Begum Hazrat Mahal** at Awadh.

Failure of the Revolt

In spite of fierce battles fought in many places, and the sacrifices made by many brave soldiers, this revolt could not succeed. It came to an end almost within a year.

The reasons for its failure are not difficult to find. The British army did not lose control over the sea and it was getting regular supply of arms from Britain. Their arms were definitely better than the arms used by the Indians. Many Indian princes played the role of traitors by helping the British.

The revolt was very brutally suppressed. Thousands of innocent men, women and children were killed. Many villages and towns were burnt to ashes. Many were hanged to death.

The last Mughal Emperor Bahadur Shah was arrested and sent to Rangoon (Burma) into exile. His three sons were killed in Delhi and their faces were presented to old emperor Bahadur Shah.

In September, 1858, British troops won back Lucknow but Begum Hazarat Mahal refused to surrender and escaped to Nepal. Rani Lakshmi Bai was driven out of Jhansi. Later, she captured Gwalior with the help of Tantia Tope. But the brave queen died fighting on 17th June, 1858. Kunwar Singh died in April 1858 and Nana Sahib escaped to Nepal. With this result after the revolt, India's rule was taken by the British Crown and the East India Company was ended. A Governor General was nominated for India by the Queen Victoria of England.

Result of the Revolt

1. The Revolt failed but it marked a new chapter in India's history. The Indians were inspired by the bravery of the leaders and the people who took part in the revolt.

2. They were ready to organise themselves in a better way and fight for their freedom.
3. Indian princes were permitted to rule their territories but under the authority of the British Government.

Just Rewind Up

- ▶ India was very prosperous in the ancient time.
- ▶ India has been peace-loving country since the ancient time.
- ▶ The first revolt for freedom took place on 10th May, 1857.
- ▶ Thousands of people were killed in this revolt.
- ▶ Bahadur Shah Zafar was arrested and sent to Rangoon (Burma).
- ▶ India's rule was taken by the British Crown.

3. Who was Bahadur Shah Zafar?
4. What was the result of the revolt?

- Read the autobiography of Mangal Pandey in your library.
- Make a list of the leaders who took part in revolt of 1857.

Creativity

**LIFE SKILLS AND VALUES**

You also can become a reformer in the lives of people of our country. Try to remove the evils from the society by writing articles and convincing the people.

Struggle for Freedom

India got freedom on 15th August, 1947. In this chapter, you will learn about some strugglers for freedom.

After the revolt of 1857, the British Government became very opposed to the Indians. It took hard steps to crush the Indians' emotions. They tortured the Indians in many ways.

Birth of the Indian National Congress

In order to draw the attention of the British Government towards their problems, the **Indian National Congress (INC)** was set up in the year 1885. The aims of the INC were very limited when it was started. They wanted the British to accept their demands. It pleaded to the government to employ as many Indians as possible in its administration. This concept of establishing the Indian National Congress was given by a retired civilian, named Sir **A.O. Hume**.

Congress sessions were held in various parts of the country, the first one being in Mumbai (Bombay). The demand that Indians should be allowed to manage their own affairs, always remained constant. These demands were very moderate. To this, most of the people believed that just humble demands would bear no fruit against the stubborn British Government. They believed that only strong action could make the British officers understand the problems of the Indians. Some of the people, who held strong opinion, were Bal Gangadhar Tilak, Lala Lajpat Rai and Bipin Chandra Pal. These leaders were known as **Lal-Bal-Pal** in the history of India. Some of the prominent Congress leaders were W.C. Banerjee, Dadabhai Naoroji, S.N. Banarjee, Gopal Krishna Gokhale, Badruddin Tayyabji and G. Subramaniya Aiyer.

Bal Gangadhar Tilak here boldly faced the British and even declared : “Freedom is my birth right and I shall have it.” He even wrote things boldly against the British in his papers ‘Maratha’ and ‘Kesari’. His repeated criticism of the British led to his imprisonment a several times.

Divide and Rule Policy of the British

When the British Government considered that it was impossible to govern more over India, it followed the ‘divide and rule policy.’ Its first step was to divide the Bengal into two parts according to the religion. In 1905, the British Government divided the Bengal into two parts– one part was associated to the Hindus and the other one was to the Muslims. This partition was opposed by both the religions– the Hindus and the Muslims.

The Swadeshi Movement

Indian leaders started the movement against the British Government. Under this movement, the British-made clothes, garments and other articles were burnt to ashes at many places collectively. People forbade to buy any item made in England. This movement was called the **Swadeshi Movement**. Thus, the British Government believed in itself to be uprooted from India.

Swadeshi Movement

In this movement, the students left the schools, teachers left teaching and advocates did not attend the courts. They took out large processions for the boycott of British goods and even stopped people from buying them. The whole country was awakened by this movement. The British got troubled in facing determined Indians. The government had to accept defeat and abolish the partition of Bengal in 1911.

Gandhiji Leads the Nation

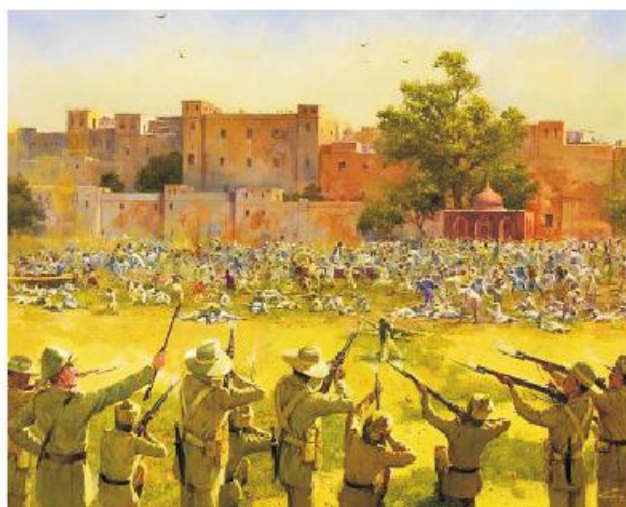

In 1915, Mohandas Karamchand Gandhi returned to India from South Africa. With this began the last phase in our struggle for independence.

In South Africa, Gandhiji had fought against the racist policies of the white rules. His method of fighting was known as **Satyagraha**. It was based on **truth** and **non-violence**.

After returning to India, Gandhiji, travelled all over the country. He was shocked to see the poverty of the people. He decided to fight against the English and also against some of the social and religious practices, especially the caste system. He asked people not to obey the unjust laws made by the government.

Jallianwala Bagh Massacre

A public meeting was being held at Jallianwala Bagh in Amritsar on 13th April, 1919. General Dyer came to the park and ordered his soldiers to fire at the crowd. Hundreds of men, women and children were killed and thousands were injured. The whole country was shocked by this incident. All Indian leaders strongly protested against this cruel act.

Jallianwala Bagh Massacre

Revolutionary Movement

Besides the peaceful movements, revolutionary activities were also going on. Some of them were **Ram Prasad Bismil**, **Ashfaq-ullah Khan**, **Roshan Singh**, **Rajendra Lahiri**, **Chandra Shekhar Azad**, **Surya Sen**, **Zatin Das**, **Badal Gupta**, **Udham Singh**, **Bhagat Singh**, etc.

Non-Cooperation Movement

Gandhiji launched the Non-Cooperation Movement in 1920. He asked people to disobey the laws peacefully. But in Chauri Chaura (in Uttar Pradesh), some people set fire to a police station and 22 policemen died. Gandhiji was against violence and he withdrew the movement immediately.

During the non-cooperation movement leaders such as **Rajendra Prasad**, **Sardar Vallabha Bhai Patel**, **Sarojini Naidu**, **Raja Gopalachari**, **Maulana Azad**, **Chittaranjan Das**, **Motilal Nehru** and **Jawaharlal Nehru** participated actively.

People protesting against the Simon Commission.

Simon Commission

The British government decided to make some changes and appointed the Simon Commission. There was no Indian in the Commission. The Congress decided to boycott it.

The commission came to India in 1929 and was greeted with the slogan– ‘**Simon Go Back**’. A new group of revolutionaries such as Bhagat Singh, Rajguru, Sukhdev, Chandrashekhar Azad, B.K. Dutt also became active at this time.

Civil Disobedience Movement

In December 1929, the Congress demanded ‘Purna Swaraj’ (Complete Independence) from the government. The Civil Disobedience Movement began in early 1930 under the leadership of Gandhiji. He started with the **Dandi March**. Gandhiji and his followers walked from the Sabarmati Ashram to Dandi (near Surat) along the coast of Gujarat. Gandhiji made salt and broke the salt law. The movement soon spread to other parts of India.

Dandi March

Quit India Movement

Gandhiji asked the government to ‘Quit India’ in August 1942. He asked the people to ‘Do or Die’ in their attempt to throw the English out of the country. Many leaders were sent to jail.

Indian National Army

Subhas Chandra Bose was a great leader of India. He organised the Indian National Army, i.e., **Azad Hind Fauj**. He fought against the English. He gave us the slogans ‘Jai Hind’ and ‘Dilli chalo’.

India Becomes Free

After the Second World War in 1945, the English government agreed to leave India. However, it was decided to divide the country into two– India and Pakistan. On **15th August 1947**, India became an independent country. On this historic occasion Jawaharlal Nehru said :

“At the stroke of the midnight hour when the world sleeps, India will awake to life and freedom.”

Jawaharlal Nehru became the first Prime Minister of India. Dr Rajendra Prasad became the first President. With this began a new phase in the history of India.

Now we have completed more than six decades of freedom. In these years, India has fought and won many wars to guard her freedom.

Just Rewind Up

- ▶ Indian National Congress was established by Sir A.O. Hume.
- ▶ Lal-Bal-Pal were three extremist leaders.
- ▶ Dadabhai Naoroji, S.N. Banerjee, Gokhle, etc. were popular moderate leaders.
- ▶ British Government divided the Bengal into two parts in 1905.
- ▶ Mahatma Gandhiji came back India in 1915 from South Africa.
- ▶ Jallianawala Bagh Massacre took place on 13th April, 1919.
- ▶ Quit India Movement was started in 1942.
- ▶ India got freedom on 15th August, 1947.

Work Station

A

Tick (✓) the correct answer :

Analytical Skills

1. The partition of Bengal was cancelled in :

(a) 1885

(b) 1911

(c) 1947

2. Indian National Congress was established in :

(a) 1885

(b) 1911

(c) 1985

3. Independent India's first prime minister was chosen :

(a) Dr Rajendra Prasad

(b) Pt J.L. Nehru

(c) Tilak

TEST PAPER

1

A

Tick (✓) the correct answer :

1. Mt Everest is located in :

(a) India

(b) Japan

(c) England

2. Equator is located at :

(a) 0°

(b) 23½° N

(c) 23½° S

3. The man first invented the :

(a) train

(b) wheel

(c) aeroplane

B

Fill in the blanks :

1. Brown colour shows the _____.

2. Ooty is a _____ station.

3. The _____ introduced railways in India.

4. Minerals are found in the state of _____.

5. These _____ are called trade winds.

C

Tick (✓) for the true and cross (×) for the false statements :

1. Map is a model of the earth.

2. Columbo is the capital of Zaire.

3. Trans-Siberian Railway runs in India.

4. Frigid zones are very hot.

D

Answer the following questions :

1. What is climate?

2. Describe the lifestyle of Bedouins.

3. What do you mean by communication?

4. Who are pygmies?

5. Which is the fastest means of transport?

TEST PAPER

2

A

Tick (✓) the correct answer :

1. Rama Krishna Mission was established by :
(a) Annie Besant ☐ (b) Vivekanand ☐ (c) Dayanand ☐
2. India was called the :
(a) Golden Temple ☐ (b) Golden Bird ☐ (c) Golden Fruit ☐
